## Report of Findings

2022

## PROJECT OVERVIEW

The Chesapeake Bay Program, with support from the Environmental Protection Agency and the Chesapeake Bay Trust, commissioned this study to understand usage of public water access sites and the barriers and motivators for residents across the Chesapeake Bay watershed, and to explore the link between water access and stewardship behavior. This project included a special focus on traditionally underserved populations.

## Project Objectives

This project had two stated objectives:

1. Increased knowledge of how residents in the Chesapeake Bay watershed use public access sites to waterways and the Bay, and the relationship between usage and practicing stewardship behaviors.
2. Increased knowledge around what barriers, real or perceived, prevent traditionally underserved populations from utilizing public access sites.

The research included both a broadly representative sampling of the watershed's population, as well as two phases of in-depth qualitative research among population segments of interest. The survey provided valuable context on a wide range of relevant issues, and its large sample size allowed for deep segmentation. The qualitative interviews offered insight into the thoughts, perceptions, and intentions of key subgroups of interest within the overall population.

## Research Methods

This study was vast in scope, with comprehensive question sets and a methodology that sought to be both representative and deeply investigative. The research was conducted in three phases, stretching over six months in 2022:

1. Representative Baywide Survey: A total of 2,263 randomly-selected adult residents of the watershed were interviewed for the survey between April 5 and June 27, 2022. This survey sample produces a margin of sampling error of no more than $\pm 2.1 \%$ at the $95 \%$ confidence level, meaning that if every resident of the watershed had been interviewed, the actual results could be expected to fall within that range at least $95 \%$ of the time. The large sample allowed for deep segmentation of the dataset to examine differences among population subgroups and other relationships in the data.

The survey covered a broad range of topics:

- Respondents' community and personal context
- Contact with the outdoors and nearby waters
- Impressions of the water
- Key perceptions and attitudes related to personal stewardship and the natural environment
- Connection and impressions of public water access sites
- Features that would make people want to visit an access site
- Motivations and barriers to visiting
- Respondent characteristics for sample balancing and segmenting

The survey sample was collected online through online consumer panels, which are databases of consumers who have signed up to take periodic surveys online about a wide variety of topics in
exchange for a small incentive, and through emailed survey invitations broadcast to a purchased general population list.

Potential survey participants were screened geographically to ensure they lived within the boundaries of the watershed. Throughout this process, sampling targets for various population subgroups were established, notably gender, age, and race and ethnicity, matching the characteristics of the watershed's population. Significant effort in the sampling process was focused on ensuring that underserved populations were well-represented in the survey dataset.

After the sample was collected, statistical weights were applied to bring the sample into close compliance with the demographic composition of the population, based on the latest available estimates from the U.S. Census Bureau's American Community Survey.

The table at right provides a breakdown of the survey sample:

| Baywide Survey |  |
| :--- | :---: |
|  | Wample |
|  | Weighted Values |
| Under age 25 | $14 \%$ |
| 25 to 34 | $18 \%$ |
| 35 to 44 | $16 \%$ |
| 45 to 54 | $18 \%$ |
| 55 to 64 | $16 \%$ |
| 65 or more | $17 \%$ |
| Asian | $4 \%$ |
| African-American or Black | $23 \%$ |
| Hispanic or Latino | $7 \%$ |
| White | $66 \%$ |
| All others | $7 \%$ |
| Prefer not to say or not sure | $3 \%$ |
| Male | $47 \%$ |
| Female | $49 \%$ |
| Another gender category | $1 \%$ |
| Prefer not to say | $2 \%$ |
| Delaware | $1 \%$ |
| DC | $4 \%$ |
| Maryland | $33 \%$ |
| New York | $3 \%$ |
| Pennsylvania | $20 \%$ |
| Virginia | $39 \%$ |
| West Virginia | $1 \%$ |
|  |  |

2. Segmented Focus Groups: Seven virtual focus groups were conducted to more deeply explore key issues among population segments of interest. With some exceptions as noted in the table below, the focus groups were concentrated on segments that experience more barriers accessing water or natural areas, or who simply have less contact with the outdoors, to better understand barriers, and the motivations and amenities in public access sites that would help overcome those barriers.

These were the segments:
Public Access Focus Group Segmentation Plan
Animating Characteristics Highlighted in Yellow

| Segment | Name | Geography | Socio-Economic | Demographic | Stewardship | Outdoor Behavior |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | Urban 1 | Urban centers, <br> Inner suburbs | Low-Moderate | People of Color | Low-Moderate | Low-Moderate |
| B | Urban 2 | Urban centers, <br> Inner suburbs | Moderate + | Younger, Mix of <br> Race \& Ethnicity | Moderate-High | Moderate - Active |
| C | Suburban 1 | Outer suburbs | Low-Moderate | Older, White | Mixed | Low |
| D | Suburban 2 | Outer suburbs | Moderate - High | Mixed | Mixed | Moderate - Active |
| E | Rural 1 | Small town, Rural | Mixed | Mixed | Mixed | Active |
| F | Rural 2 | Small town, Rural | Low | Mixed | Low-Moderate | Moderate |
| G | Spanish- <br> dominant | Watershed-wide | Low-Moderate | Mix of 1 1 $^{\text {st }}$ and 2 <br> Gen Immigrants | Low-Moderate | Moderate |

The focus groups were held virtually on the Zoom platform between July 9 and 12, 2022. An average of four people participated in each discussion ( 28 total), a group size in the virtual environment that allows for an energetic, interactive conversation while allowing all participants to weigh in comfortably. Each discussion lasted about 120 minutes, and participants received an honorarium of $\$ 100$ in recognition of the time and effort to attend.
3. In-Depth Interviews: As a final step, we invited eight respondents into individual in-depth interviews. These interviewees were chosen because their responses to our screening questionnaire indicated they had undergone a transformation in their stewardship behavior, and/or their relationship with natural waters. The interview was focused on exploring changes in their behavior, and the possible influence of access to the water.

These 45-minute interviews were conducted virtually on the Zoom platform, October 23 and 24, 2022. Interview participants received a $\$ 75$ honorarium.

OpinionWorks LLC, an independent research organization based in Annapolis, Maryland, developed and conducted this perceptions research through a collaborative process with the Chesapeake Bay Program's Public Access Workgroup, led by Jackie Kramer of the National Park Service.

A significant effort was made to define the meaning of "underserved populations," which was ultimately defined as:

- Communities of Color
- People of any background who are not using water access sites that are near them
- People whose first language is not English
- Low-income communities poor water access, or poorly-maintained or under-resourced access sites
- People with physical disabilities
- Elderly residents
- People reliant on public transportation or with transportation gaps

Attention was paid to these population segments in conducting and analyzing this research, including segmenting the survey findings and dedicating significant energy to these segments in the focus groups.

Full results follow. Additional material is appended, including the survey questionnaire with aggregate data and verbatim responses (Section 2), segmented data for a variety of population subgroups (Section 3), the focus group and in-depth interview discussion guides (Section 4), and focus group and interview transcripts (Section 5).

## EXECUTIVE SUMMARY

This is a far-reaching study, conducted between April and October 2022, consisting of three research phases and an ambitious mission to understand the public's relationship and expectations for public water access sites, the relationship between water access and personal stewardship behavior, and the particular barriers for traditionally underserved population segments.

The core of this study is a large, representative survey of residents across the Chesapeake Bay watershed, assessing a broad range of perceptions, attitudes, and behaviors. The quantitative survey was backed up by focus groups and in-depth interviews to delve into people's motivations and barriers, particularly among underserved population segments, infrequent visitors to water access sites, and people who had undergone a transformation in their relationship with the water.

Our findings are organized in four chapters, as follows.

## The Context for Watershed Residents

- This study found a public in 2022 that was just beginning to emerge from the pandemic, heavily focused on financial challenges, health concerns, and family issues.
- The survey measured residents' contact with the outdoors across a wide range of activities, finding $60 \%$ who sit or walk near the water at least occasionally, and about $30 \%$ who engage in more active pursuits such as biking on trails, fishing or crabbing, or swimming in natural waters. Twenty percent of the watershed's residents paddle or sail at least occasionally, and $15 \%$ powerboat, water ski, or jet ski.
- No matter what their activities, more than half the public (54\%) said it is very or somewhat important "to spend time outside experiencing nature." The survey data show that more affluent and White residents place somewhat greater importance on experiencing nature, compared to residents with lower incomes or People of Color.
- Similarly, about half the public (52\%) indicated that the environment is a high priority for them. Women and more affluent residents exhibited slightly more concern for the environment than others. There were no significant differences in concern for the environment based on race or ethnicity.

## Connections to the Water

The emotional and mental health benefits of being near water are well-known and were strongly affirmed by participants in this study from all types of backgrounds. But the ability to picture in their mind and name a waterway near their home varied widely. That feeling of connection to nearby water emerged as a key predicter of many attitudes and behaviors measured in this study. Impressions of the health of local waters and the Bay varied widely, and confidence in the waters emerged as a factor closely related to visitation and usage of public water access sites.

- About half of residents (49\%) said that having convenient access to the water for outdoor activities is very or somewhat important to them. Importance of water access trended slightly higher among residents with children and higher-income households.
- Beyond that 49\%, many other residents value just being near the water, whether picnicking, walking near the water, or sitting beside it.

## 2022

- There is widespread affirmation of the emotional benefits of being near or on the water. More than two-thirds (68\%) acknowledged that "being near or on the water makes me feel happier." That awareness is much stronger among people who visit the water frequently. The focus groups and indepth interviews were filled with anecdotes about the emotional and mental health benefits, even among people who visit infrequently.
- About eight in ten residents of the watershed (79\%) can picture in their mind "the closest stream, creek, river, or bay near where you live." Just under half the public (44\%) can picture it and know its name. As this report will detail, the ability to both picture and name nearby water corelates positively with many attitudes and intentions - offering one bit of evidence that water access motivates concern. The ability to both picture and name nearby water is greater in high-income households, and about twice as high among White residents compared to People of Color.
- Confidence in the safety of eating what comes out of local waters or swimming in those waters is mixed, with more than one-quarter saying they are "not confident" on either count. People with more frequent access to the water are significantly more confident about eating what comes out of local waters or swimming.
- On average, people graded the health of the Chesapeake Bay a "C." Their grades varied widely, with $27 \%$ grading the health of the Bay A or B, $37 \%$ giving it a C, and $19 \%$ a D or F. The remainder were unsure.
- The grade for "the creeks and rivers near your home" was only slightly higher at "C-Plus," and also varied widely. People who access the water more frequently give much higher grades to the waterways near them.
- On balance, the public perceives a slightly positive trend in Bay health, with $27 \%$ saying it is getting better and $20 \%$ saying it is getting worse. But that leaves over half who think the health of the Bay is "staying about the same" or they are not sure. But among people who can both picture and name the waterway nearest them, the perceived trend in Bay health is much more positive - about two-toone positive.
- Overall, $70 \%$ of residents across the watershed agree with the statement, "I care about the Chesapeake Bay." Not surprisingly, that sentiment is strongest in Maryland and Virginia, near the main stem of the Bay. But even well upstream in Pennsylvania and West Virginia, the number is around $60 \%$, and near $50 \%$ in New York.

## Evaluating Public Access Sites

This research finds half to two-thirds of the watershed's residents feel they have convenient access to water, and feel welcome and a sense of belonging in parks, on trails, and in other public spaces near the water. These feelings of access, welcome, and belonging generally skew towards older, more affluent, and White residents of the watershed.

Among less-frequent visitors to water access sites, there was a broad desire to be near, but not on or in the water. These less-frequent visitors feel all the same emotional benefits of being near water as more active visitors do, but they are apt to look for a picnic table or bench, rather than a boat or a pier. And for the less-frequent visitor, there is a greater need for programming, or a desire to gather in these spaces with friends or loved ones, or join a group of like-minded people.

- Almost six residents out of ten (58\%) are "aware of any public water access sites close to where you live." Slightly over half of them said the closest public water access site was within five miles or 30

2022
minutes of their home - keeping in mind that people are reaching these sites through different transportation modes. People with reliable transportation are much more aware of a public access site near them, as are residents who are White.

- More than half of residents (57\%) believe "There is convenient access to the water for boating, fishing, or swimming near where I live." The perception of convenient water access is the highest in Pennsylvania and Virginia, and lowest in Maryland and the District of Columbia, with the three rural states in between.
- About two-thirds of residents (69\%) agree with the statement, "I always feel welcome in parks and other public spaces around here." But that feeling of welcome is about 15 percentage points higher among White residents compared to Black, Hispanic, or Asian residents. Younger residents (under age 25) and lower-income residents are also much less likely than older or more affluent residents to feel welcome in these spaces.
- Fewer than six in ten residents (57\%) agree with the statement, "When I am in the parks or on trails near the water, I see other people like me." As with other indicators, the feeling of belonging is significantly higher among more affluent and White residents compared to others.
- Asked to choose from a list of 20 possible features that "would most make you want to visit a public water access site," residents focused on restrooms, trails, picnic areas, and parking. People who visit access sites infrequently are more likely than others to be looking for those four amenities, along with festivals and playgrounds. They are less likely than frequent visitors to be looking for active water pursuits like a swimming area, dock or pier, or fishing area.
- In the focus groups, which were concentrated on less frequent visitors and underserved audiences, participants underlined those preferences. Many said they wanted to be near, but not on or in, the water. They gravitated towards images of a picnic area where they could gather with family or friends, or a bench where they could sit by the water. Some stressed the need for programming that would draw them to an access site.
- Thinking of the public water access site closest to them, survey participants were most likely to recall that it has parking, a fishing area, boat ramp, picnic area, and dock or pier.
- Nearby public access sites received mixed grades for being easy to find, safe, and well-maintained, with maintenance earning the poorest grades.
- About four watershed residents in ten said they are visiting a public water access site at least once a month, with $5 \%$ visiting almost every day, $14 \%$ at least once a week, and $22 \%$ once or twice a month. Hispanic residents visit more frequently than others. White residents, despite having the most convenient access, reported visiting the least often. Residents under age 45, and those with children, visit more frequently. Reliable transportation also emerges as a key determinant for how often people visit public water access sites.
- Asked what would cause them to visit, residents wished they had more time or better weather, not things that park managers can control. But they also stressed the importance of convenient access, as well as programs and activities, and someone to go with.
- Lack of time and lack of people to go with emerged as major barriers, as did mosquitos. People also worry about overcrowding, lacking the equipment they might need, contaminated water, and the inability to swim.

2022

## The Potential for Water Access to Foster Environmental Stewardship

This study assessed attitudes and perceptions that can drive stewardship behavior. We found a fairly widespread desire in the public to take action to improve the health of local waters, and a relationship between accessing the water and feeling motivated to help protect it. But there are limitations: lack of knowledge about stewardship actions and a feeling that one's own actions may not make a difference, as well as significant limits on the personal responsibility people feel for contributing to the problem of water pollution. This adds up to a muddied picture of stewardship.

- There is good willingness in the public to take personal action to improve the health of local waters. Sixty percent agreed with the statement, "I want to do more to help make local creeks, rivers, and lakes healthier." That number climbed significantly among people who visit the water frequently, and among people who can both picture and name the closest water. Would-be stewards indicated in the focus groups that they worry that their actions will just be undone by others who are less caring, and that fear dampens their enthusiasm.
- A more modest $52 \%$ agreed with the statement, "I know some things I can do to help reduce water pollution where I live." Only $17 \%$ agreed strongly, suggesting a significant knowledge gap when it comes to stewardship actions.
- More than six residents in ten $(61 \%)$ affirmed the idea that "Being near or on the water makes me want to do more things to protect it." That number jumped significantly higher among people who visit the water frequently.
- Feelings of personal agency, that one's own actions could make a difference for the water, are limited. Only about half the sample (51\%) affirmed that their own actions could add up to something, disagreeing with the proposition "Individual people like me can't do much to help fix water pollution." Feelings of personal agency are slightly stronger among more affluent and bettereducated people, and slightly weaker among lower-income residents and People of Color.
- A large share of the public (56\%) feel that polluted water affects them personally. That feeling of impact is greater the more frequently people visit the water.
- But most residents do not feel responsible for the water pollution that exists. Only about onequarter of the public ( $28 \%$ ) agreed with the statement, "My actions contribute to water pollution where I live." The data show that people who feel more responsible for water pollution also feel more motivated to change their behavior to help out.

Exploring the relationship between water access and stewardship through in-depth interviews, we encountered a diversity of ways that people emerge into stewardship: by being confronted with litter or dumping, out of concern for the safety of children and pets, by trying the activity of kayaking or hiking, or by simply running along or sitting beside the water and feeling the emotional impact.

One thing was consistent across these stories. Stewardship rarely just happens with exposure to the water. According to the descriptions of these study participants, there is an event, an opportunity to think, the influence of a teacher, the support of a community that sparks stewardship. Exposure to water is a starting point, but for most people it is not sufficient to foster stewardship. Something more intentional needs to occur for awareness to turn into stewardship action.

This report concludes with four high-level recommendations:

1. Prioritize investments in infrastructure:

- Benches and picnic tables
- Trails near the water for walking, running, and biking
- Restrooms

2. Experiment with education and engagement programs at access sites:

- Proactive outreach to communities
- Community involvement in planning and programming
- Think about transportation gaps
- Guides and educators onsite
- Interpretive signage with a focus on stewardship

3. Extend a sense of welcome and belonging:

- Staff and volunteers who reflect the characteristics of the community
- Reflections of the community in public art
- Telling the stories of local residents and cultural history

4. Gain an understanding of who is visiting, and who is not visiting:

- Simple data collection from visitors: characteristics and preferences
- Regionally, development of a personas model

Detailed results follow.

2022

## DETAILED FINDINGS

This narrative is organized in four chapters, detailing the findings within the major subject areas addressed in the research:
I. The Context for Watershed Residents: A look at the context in which residents approach questions of public water access, including their daily hopes and concerns, their current activities in the outdoors, the importance of being outdoors, and general environmental affinity.
II. Connections to the Water: An assessment of the role that local waters play in people's lives and their desire to connect with the water, including the importance of having convenient access to the water, the emotional impact of being near water, the ability to picture and identify water near them, confidence in the health and safety of nearby waters and the Chesapeake Bay, a sense of the trend in water quality, and feelings of connection to the Bay.
III. Evaluating Public Access Sites: A detailed picture of residents' response to water access, including awareness of public water access sites and convenience of access, feelings of welcome and belonging in natural public spaces, features of public access sites that would make people want to visit, evaluation of nearby public water access sites, frequency of visiting, and motivators and barriers to visiting more frequently.
IV. The Potential For Water Access To Foster Environmental Stewardship: An exploration of the connection between public water access and stewardship actions, including an assessment of key attitudes related to stewardship behavior such as intention, confidence, personal impact, agency, and personal responsibility; and an exploration of the transformative impact that water access has had on individuals participating in this study.

Throughout this discussion, there is attention to the distinctive views and experiences of underserved population segments. This narrative concludes with recommendations for the Public Access Workgroup to consider as it moves forward in developing new public water access sites and maintaining or upgrading existing sites to best serve the needs of the watershed's residents, particularly those who are underserved, or who are infrequent or non-visitors to public water access sites today.

2022

## I. THE CONTEXT FOR WATERSHED RESIDENTS

Any effort to attract more people to public water access sites, and to engage them once they arrive, needs to be anchored in the context of their everyday lives. What are the hopes are worries that are on their minds on a daily basis? How could access to the water connect with their daily reality? What would motivate them to visit within that daily context?

## Daily Hopes and Worries

As a starting point, the survey asked people to "think for a moment about the hopes and worries that are most important to you in your daily life." Respondents were asked to list the two most important hopes or worries. The question was open-ended, and the raw responses have been categorized, as illustrated in the chart below.

Keeping in mind that the survey was conducted in the Spring of 2022, when the country was still grappling with the pandemic and its economic fallout, it is nonetheless striking that nearly half the sample (45\%) mentioned concerns about their finances, debt, and just making ends meet. Another 8\% mentioned inflation and the cost of living specifically.

About one-fifth (21\%) mentioned health concerns affecting themselves or loved ones. Also on the list were family and partner issues, thoughts about the future and a better life, and hopes for one's own and other people's children. Crime and violence in communities made the list of leading concerns, as did world events, notably the war in Ukraine.

# Context: Most Important Hopes and Worries 

Open-Ended; Top Ideas Mentioned

Think for a moment about the hopes and worries that are most important to you in your daily life. What is the hope or worry that you think about the most on a daily basis? Is there another one that you often think about? (Open-ended. Categorized responses shown.)

2022
Rounding out the list, and illustrated in the chart were relationship hopes and concerns, the ongoing effects and worries about catching COVID-19, political divisiveness, and just getting through the day. Looking at the list up an down, one is struck by how personal many of these reflections are.

## Context: Most Important Hopes and Worries

(continued, next page)

2022

## Activities in the Outdoors

The survey measured people's contact with the outdoors through a range of activities, from walking outdoors or sitting near the water to activities such as biking, fishing, or swimming.

Many residents just want to get outside, even if they are not pursuing an activity like boating or swimming. Across this list of 11 activities, residents of the watershed are most likely to simply "get outside and go for walks." Nearly half the population (46\%) do so frequently, and another $35 \%$ occasionally, for a total of $81 \%$.

The next-most common activity is to "picnic or just relax outdoors," with two-thirds (66\%) doing so frequently or occasionally. Sixty percent of survey respondents "sit or walk near the water" frequently or occasionally.

Among the more focused pursuits, about half the public (48\%) said they "birdwatch and view wildlife" frequently or occasionally, and a similar $48 \%$ said they swim in a pool at least occasionally.

Nearly one-third of residents (30\%) bike on trails, and similar numbers go fishing or crabbing (29\%), or swim or wade in local waters (29\%). Twenty percent paddle at least occasionally, while $17 \%$ hunt and $15 \%$ powerboat, water ski, or jet ski. (Note that percentages may not always appear to add correctly due to rounding.)

How often do you do any of these things? Use this scale: frequently, occasionally, rarely, or never.

The segmented survey data found in Section 3 of this report details the propensity of a wide variety of population segments to take part in each of these activities. For example, the data show that paddling is much more common among affluent residents, and that fishing and crabbing are just as common among urban as among rural residents (and much less so among suburban residents) - and that fishing and crabbing are the only activities on this list that are just as likely to be practiced by the lowest-income households as the highest. Such segmentations can provide individual park units with helpful data for how best to engage with the public, depending on the characteristics of their local population.

2022

## The Importance of Spending Time Experiencing Nature

Beyond the mere fact of pursuing individual activities outdoors, the survey explored how important it is for people to simply "spend time outside experiencing nature." More than half of the public finds that important. One-quarter (24\%) consider it "very important" to spend time outside experiencing nature. Another $29 \%$ consider it "somewhat important" to do so, for a rounded total of 54\%

The question was positioned this way, intended to determine whether people make time to be outside and prioritize that over other activities:
"When you think about all the things you could be doing with your time, how important is it to you to spend time outside experiencing nature?"

## Importance of Being Outside Experiencing Nature

When you think about all the things you could be doing with your time, how important is it to you to spend time outside experiencing nature?

Framed this way, "experiencing nature," the data show both a socio-economic skew and a racial-ethnic skew towards residents who are more affluent and White.

Importance of Being Outside Experiencing Nature

| Household Income | Very <br> important | Somewhat <br> important | Total <br> Important | Neutral | Unimportant |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Less than $\$ 50,000$ | $21 \%$ | $28 \%$ | $49 \%$ | $24 \%$ | $27 \%$ |
| $\$ 50,000$ to $\$ 74,999$ | $24 \%$ | $32 \%$ | $56 \%$ | $19 \%$ | $24 \%$ |
| $\$ 75,000$ to $\$ 149,999$ | $29 \%$ | $36 \%$ | $64 \%$ | $11 \%$ | $24 \%$ |
| $\$ 150,000$ or more | $35 \%$ | $28 \%$ | $63 \%$ | $15 \%$ | $23 \%$ |
| Race or Ethnicity <br> Asian |  |  |  |  |  |
| Black/African-American | $21 \%$ | $19 \%$ | $27 \%$ | $29 \%$ | $47 \%$ |
|  | $23 \%$ | $23 \%$ | $48 \%$ | $20 \%$ | $33 \%$ |
| Hispanic/Latino | $27 \%$ | $32 \%$ | $56 \%$ | $24 \%$ | $29 \%$ |
| White | $27 \%$ | $59 \%$ | $17 \%$ | $26 \%$ |  |

## The Environment as a Priority

As an additional basic point of context, the survey sought to understand the level of personal priority that residents place on protecting the environment. To help counteract social desirability bias - in other words, survey participants tossing off an answer that they think the survey taker wants to hear - the question was framed in the negative: "Worrying about the environment is not a priority for me."

Most residents of the Chesapeake Bay watershed place a high priority on protecting the environment. On the survey, only one-quarter (24\%) agreed with the statement. A majority of $52 \%$ flatly disagreed with this negative statement, suggesting that slightly over half the Bay watershed's residents have an environmental affinity. Nearly half of those ( $24 \%$ of the overall public) strongly disagreed with the statement, indicating that the environment is strongly motivating for them.

Meanwhile, one-quarter (24\%) said they were neutral or not sure how they felt, and another 24\% agreed with the statement.

## Worrying about the environment is not a high priority for me.

For each of the statements that follow please say if you
strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

Framed this way, residents were nearly equally likely to express concern for the environment regardless of race and ethnicity or age. Differences emerged by gender and affluence. Women were slightly more likely than men ( $+5 \%$ ) to express environmental sensitivity, and households earning over \$100,000 per year were somewhat more likely than those earning less (+8\%). Sciance. Restoration. Partnership.

2022

## II. CONNECTIONS TO THE WATER

This section explores a variety of connections to the water, including the importance of having convenient access and the emotional response to being near water, as well as the simple ability to picture and name water closer to where people live. Other measures in this section relate to the perceived health of nearby waters and the Bay, and the fish, crabs, and oysters that come out of those waters. Each of these plays a role in how likely residents are to access water near where they live.

## The Importance of Having Convenient Access to the Water

About half (49\%) the public considers it very or somewhat important to have convenient access to the water for outdoor activities. Almost one in five (18\%) consider convenient access to the water to be very important.

## Importance of Having Convenient Access to the Water

And how important is it to you to have convenient access to the water for any of the outdoor activities just mentioned?

The importance of public access is relatively consistent across most population subgroups, trending only slightly higher among residents under age 45, those with children, and upper-income households. With very few exceptions, the "high importance" number was in the mid-40s or higher.

2022

## Emotional Benefits of Being Near Water

The emotional and mental health benefits of being near the water are well-known. Measured quantitatively, a two-thirds majority affirm the statement, "Being on or near the water makes me feel happier."

# Being near or on the water makes me feel happier. 

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

Among people who do access the water, awareness of this mental health benefit is must stronger. Among people who visit a public water access site monthly or more often, $75 \%$ agree with this statement, and nearly half ( $45 \%$ ) agree strongly. Meanwhile, among people who rarely or never visit a water access site, only $54 \%$ agree that being near water makes them feel happier, and a mere $19 \%$ agree strongly. Non-visitors to the water or not much more likely to disagree with this statement, but are simple more likely to be neutral or not sure.
Being near or on the water makes me feel happier.

| Visit the Water... | Strongly <br> agree | Somewhat <br> agree | Total Agree* | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| At least monthly | $45 \%$ | $29 \%$ | $75 \%$ | $15 \%$ | $11 \%$ |
| Rarely or never | $19 \%$ | $35 \%$ | $54 \%$ | $31 \%$ | $15 \%$ |

*Numbers may not appear to add correctly due to rounding.
Consistently in the focus groups, participants noted the emotional benefit of being near water. These quotes are all from urban focus group participants, mostly low-income and People of Color, who experience immense satisfaction, peace, and enjoyment from being close to water:
"Actually it makes me happy because it's the total opposite of...all of the stress from work and stress from everything going on. You get around the water, it's nice and calm and you feel free. You can relax. It's just the total opposite of what I've been through. I'm like, 'This is life for me. This is excellent.'" - Urban Focus Group Participant
"I feel it makes you feel happy. Cause it's some sort of meditation. I have yet to hear somebody that hates going to the beach or the lake. Just like everyone agreed on this..." (Moderator): "Even if you don't know how to swim?" (Participant): "Yeah. Just because you could sit there and read a book. As long as you're near the water, you're getting the benefits of being around the water, seeing people happy, swimming, kids running around. So, it's like a place you want to be to kind of get some enjoyment in your life." - Urban Focus Group Participant

2022
Participants in a rural focus group reeled off a series of adjectives to explain the effect when they are near the water: "Peaceful," "Relaxing," "Calming," "Hypnotic," "Zen." One of the participants explained:
> "Sometimes if you're just relaxing and not thinking, it's like you're in another world, like it's just you and the water." - Rural Focus Group Participant

## Ability to Picture and Name the Water Near You

As a point of context, the survey explored people's perceptions of natural waters located near them. First, they were asked if they could "picture in your mind the closest stream, creek, river, or bay near where you live?" Four out of five residents of the watershed said they could picture water - leaving 20\% who said they could not, or were not sure.

Within the $79 \%$ who said they can picture the water nearest them, $44 \%$ knew the name of the stream, creek, river, or bay, and another $11 \%$ said the nearest water was too small to have a name - leaving $25 \%$ who could picture water but did not know its name.

Picturing the Closest Water

Can you picture in your mind the closest stream, creek, river, or bay near where you live? If yes, what is its name?

## 2022

There is evidence in the survey that people of lower socio-economic status have a harder time picturing in their mind water close to where they live. The ability to both picture water and know its name is significantly higher among residents with household incomes over $\$ 50,000$, compared to those with incomes of $\$ 25,000$ or less.

Picturing the Closest Water

| Household Income | Yes can picture <br> \& know its name | Can picture <br> but don't know <br> name/too small | All who can <br> picture closest <br> water | Cannot picture <br> water or not sure |
| :--- | :---: | :---: | :---: | :---: |
| Less than $\$ 25,000$ | $38 \%$ | $33 \%$ | $71 \%$ | $28 \%$ |
| $\$ 25,000$ to $\$ 49,999$ | $45 \%$ | $37 \%$ | $82 \%$ | $18 \%$ |
| $\$ 50,000$ or more | $51 \%$ | $35 \%$ | $86 \%$ | $14 \%$ |

A similar relationship exists with race and ethnicity, where White residents are significantly more likely to be able to picture nearby water compared to residents who are Black or African-American, Hispanic or Latino, or Asian.

Picturing the Closest Water

|  | Yes can picture <br> \& know its name | Can picture <br> but don't know <br> name/too small | All who can <br> picture closest <br> water* | Cannot picture <br> water or not sure |
| :--- | :---: | :---: | :---: | :---: |
| Asian | $23 \%$ | $51 \%$ | $75 \%$ | $25 \%$ |
| Black/African-American | $30 \%$ | $43 \%$ | $73 \%$ | $27 \%$ |
| Hispanic/Latino | $25 \%$ | $44 \%$ | $78 \%$ | $21 \%$ |
| White | $55 \%$ | $30 \%$ | $85 \%$ | $16 \%$ |

*Numbers may not appear to add correctly due to rounding.
This relationship with water close to where one lives - the ability to even picture it in one's mind and possibly name it - is a very important indicator, as we will see elsewhere in this report.

## Confidence in the Safety of Eating Fish and Crabs \& Confidence in Safety of Swimming

Perceptions of the health of local waters can be measured in multiple ways. First, survey respondents were asked how confident they felt about the safety of eating fish, crabs, and oysters that come out of local waters. Only $21 \%$ of watershed residents felt "very confident" about that. Another $41 \%$ felt "somewhat confident," leaving $26 \%$ who were flatly "not confident" (and $12 \%$ who said they were not sure).

For swimming in local waters, numbers were similar. Fifteen percent felt very confident and 43\% somewhat confident, leaving about one-third (31\%) who were not confident about swimming in local waters, and $9 \%$ who were not sure.

## Confidence in the Local Waters

Safety of Eating What Comes Out of Local Waters and Swimming in Those Waters

Are you very confident, somewhat confident, or not confident that...
...The fish, crabs, or oysters that come out of local waters are safe to eat?
...That it is safe to swim in local waters?

Confidence in local waters is directly related to how frequently people visit an access point. The relationship is strongest with respect to the safety of the fish, crabs, or oysters that come out of local waters, with frequent visitors much more confident than others about the safety of local seafood.

Confidence That It is Safe to Eat What Comes Out of Local Waters

| Visit the Water... | Very <br> confident | Somewhat <br> confident | Total <br> Confident | Not <br> confident | Not sure |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Daily | $54 \%$ | $31 \%$ | $85 \%$ | $8 \%$ | $7 \%$ |
| Weekly | $31 \%$ | $46 \%$ | $77 \%$ | $19 \%$ | $4 \%$ |
| Monthly | $18 \%$ | $49 \%$ | $67 \%$ | $25 \%$ | $7 \%$ |
| Several times a year | $18 \%$ | $45 \%$ | $63 \%$ | $29 \%$ | $8 \%$ |
| Rarely or never | $19 \%$ | $35 \%$ | $54 \%$ | $31 \%$ | $15 \%$ |

It is also significant that confidence in local fish, crabs, and oysters is related to where one lives. Confidence is greatest among residents of Maryland, Delaware, and Virginia, and confidence is lowest among residents who are further upstream.

Confidence That It is Safe to Eat What Comes Out of Local Waters

| State of Residence | Very <br> confident | Somewhat <br> confident | Total <br> Confident | Not <br> confident | Not sure |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Maryland | $25 \%$ | $43 \%$ | $68 \%$ | $20 \%$ | $12 \%$ |
| Delaware | $24 \%$ | $40 \%$ | $64 \%$ | $26 \%$ | $9 \%$ |
| Virginia | $20 \%$ | $42 \%$ | $63 \%$ | $27 \%$ | $10 \%$ |
| DC | $14 \%$ | $42 \%$ | $56 \%$ | $29 \%$ | $15 \%$ |
| Pennsylvania | $17 \%$ | $37 \%$ | $53 \%$ | $32 \%$ | $15 \%$ |
| New York | $11 \%$ | $36 \%$ | $47 \%$ | $38 \%$ | $15 \%$ |
| West Virginia | $7 \%$ | $35 \%$ | $41 \%$ | $42 \%$ | $17 \%$ |

## Grading the Health of Nearby Waters and the Chesapeake Bay

Perceptions of the health of local waters vary widely. While $9 \%$ of residents gave the "the health of the creeks and rivers near your home" a grade of "A" and 24\% a B Grade, 20\% graded their nearby waters D or F.

Ten percent were not sure how to grade their local waters. Keep in mind that $20 \%$ of people could not even picture the water near them, so some of these perceptions of water quality may be based on general conditions in the community rather than from direct knowledge or experience with the water. Nonetheless, these perceptions are important in determining how readily people will engage with the water.

## Perception of the Health of the Waters

How would you grade the health of the creeks and rivers near your home on an $A$ to $F$ scale where " $A$ " means extremely clean and healthy, and " $F$ " means extremely polluted and unhealthy?

What grade would you give the health of the Chesapeake Bay as a whole?

For the Chesapeake Bay as a whole, perceptions are similar. A plurality of $37 \%$ rated the health of the Bay a "C," while about one-quarter (27\%) gave it an A or B grade, and one-fifth (19\%) graded it D or F. One in six (16\%) said they were not sure.

Perceptions of the health of local creeks and rivers are strongly related to two factors: how frequently one accesses the water and socioeconomics. People who visit public water access sites more frequently are much more likely to view the health of local waters positively, as are people who have higher incomes. Both relationships are very strong. Note that the income relationship levels off quickly after $\$ 75,000$ annual income, so higher income brackets have been combined in the table below.

Grading the Health of Local Creeks and Rivers

| Visit the Water... | $\mathbf{A}+\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{D}+\mathbf{F}$ | Not sure | Average* |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Daily | $65 \%$ | $18 \%$ | $12 \%$ | $4 \%$ | 2.98 |
| Weekly | $46 \%$ | $37 \%$ | $15 \%$ | $2 \%$ | 2.38 |
| Monthly | $39 \%$ | $40 \%$ | $18 \%$ | $3 \%$ | 2.26 |
| A few times a year | $18 \%$ | $44 \%$ | $30 \%$ | $8 \%$ | 2.13 |
| Rarely or never | $22 \%$ | $35 \%$ | $26 \%$ | $17 \%$ | 1.88 |

Grading the Health of Local Creeks and Rivers

| Household Income | A + B | C | D + F | Not sure | Average* $^{*}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Less than $\$ 25,000$ | $32 \%$ | $31 \%$ | $25 \%$ | $12 \%$ | 2.04 |
| $\$ 25,000$ to $\$ 49,999$ | $27 \%$ | $41 \%$ | $23 \%$ | $9 \%$ | 2.06 |
| $\$ 50,000$ to $\$ 74,999$ | $32 \%$ | $44 \%$ | $16 \%$ | $8 \%$ | 2.18 |
| $\$ 75,000$ or more | $41 \%$ | $38 \%$ | $15 \%$ | $6 \%$ | 2.35 |

*Average on a traditional 4.0 scale where $A=4, B=3, C=2, D=1, F=0$.
When it comes to the health of the Chesapeake Bay as a whole, it will come as no surprise that impressions are the strongest closest to the main stem of the Bay, in Maryland, DC, Delaware, and Virginia. Assessment of the Bay's health, as measured by the average of the grades individuals gave, is weakest is Pennsylvania, West Virginia, and DC. Nowhere except West Virginia, where the sample size is low, does the grade deviate significantly from the Baywide norm of 2.09.

Grading the Health of the Chesapeake Bay

| State of Residence | A + B | C | D + F | Not sure | Average* $^{*}$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| DC | $25 \%$ | $40 \%$ | $26 \%$ | $9 \%$ | 1.90 |
| Maryland | $27 \%$ | $40 \%$ | $21 \%$ | $11 \%$ | 2.07 |
| Delaware | $31 \%$ | $33 \%$ | $24 \%$ | $12 \%$ | 2.12 |
| Virginia | $31 \%$ | $38 \%$ | $16 \%$ | $15 \%$ | 2.19 |
| Pennsylvania | $21 \%$ | $34 \%$ | $20 \%$ | $25 \%$ | 1.96 |
| West Virginia | $15 \%$ | $30 \%$ | $27 \%$ | $28 \%$ | 1.66 |
| New York | $20 \%$ | $22 \%$ | $18 \%$ | $40 \%$ | 2.11 |

## Perceptions of the Trend in Bay Health

The perceived trend in Bay health is marginally positive. More people today think the health of the Chesapeake Bay is getting better (27\%), compared to those who believe it is getting worse (20\%). Though the share of the public who see progress is modest, today's result is in stark contrast to numbers we were measuring 15 years ago, which were two-to-one negative. This is important because our past research has shown that the public is much more readily engaged when they believe the trend is positive and their own contribution to the effort could add to that positive momentum.

## 2022

As illustrated in the table below, having a relationship with the water appears to make a difference in this metric. People who can picture and name the water closest to their home are much more likely to feel encouraged about the trend in water quality compared to people with less water contact. Similarly, watershed residents who feel they have convenient access to the water feel much more positive about the trend compared to residents who do not have convenient water access.

Impact of the Ability to Picture Nearby Water on Perceptions of the Trend in Bay Health

| Trend in Bay Health | Can picture and <br> name nearby water | Can picture but not <br> name it | Cannot picture <br> nearby water |
| :--- | :---: | :---: | :---: |
| Getting better | $34 \%$ | $25 \%$ | $18 \%$ |
| Getting worse | $18 \%$ | $23 \%$ | $16 \%$ |
| Staying about the same | $30 \%$ | $32 \%$ | $30 \%$ |
| Not sure | $18 \%$ | $20 \%$ | $35 \%$ |

Impact of the Convenience of Water Access on Perceptions of the Trend in Bay Health

| Trend in Bay Health | Convenient water <br> access | Inconvenient or no <br> water access | Neutral or not sure |
| :--- | :---: | :---: | :---: |
| Getting better | $30 \%$ | $27 \%$ | $20 \%$ |
| Getting worse | $17 \%$ | $26 \%$ | $19 \%$ |
| Staying about the same | $33 \%$ | $27 \%$ | $28 \%$ |
| Not sure | $19 \%$ | $20 \%$ | $32 \%$ |

## Feeling Psychically Connected to the Chesapeake Bay

The Bay commands broad appreciation from the public. Seventy percent of residents agreed with the statement, "I care about the Chesapeake Bay." Half of those - or just over one-third of the public across the watershed - felt strongly about that.

I care about the Chesapeake Bay.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

2022
This psychic attachment to the Bay is naturally stronger in the states that are closest to the main stem, but there is a significant sense of attachment in all parts of the watershed. It is much stronger among people who can both picture and name the water that is closest to where they live. The sense of caring for the Bay rises steadily with age, as well.

I care about the Chesapeake Bay.

| State of Residence | Strongly <br> agree | Somewhat <br> agree | Total Agree | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Maryland | $44 \%$ | $32 \%$ | $76 \%$ | $15 \%$ | $9 \%$ |
| Virginia | $35 \%$ | $37 \%$ | $72 \%$ | $20 \%$ | $8 \%$ |
| Delaware | $30 \%$ | $38 \%$ | $68 \%$ | $18 \%$ | $14 \%$ |
| DC | $26 \%$ | $34 \%$ | $60 \%$ | $23 \%$ | $17 \%$ |

2022

## III. EVALUATING PUBLIC ACCESS SITES

This section of the report assesses people's awareness and sense of proximity to a public water access site, their feelings of welcome and sense of belonging in such places, the motivators and amenities that would attract them there, an assessment of how that matches with their nearest public access site, and barriers that are keeping them from accessing the water.

## Awareness of Nearby Public Water Access Sites

A key issue for water access is whether residents are aware of public water access sites that are near them, and whether they consider them close and accessible. Asked directly, "Are you aware of any public water access sites close to where you live?" just under six in ten residents (58\%) across the Bay watershed said they were aware of a public access site. The remainder said they were not aware or were not sure.

Regardless of whether they felt a site was close to them, residents were asked to estimate how far from their home was the nearest public water access site. One-fifth (21\%) of the survey sample estimated that a site was very close, within 10 blocks or one mile or 10 minutes of their home. Another one-third said the nearest site was one to five miles, or up to 30 minutes away. Thirty-eight percent said it was farther than five miles or 30 minutes, and the remaining $6 \%$ were not sure. (Note that these three grouping of proximity are subjective and attempt to take into account different modes of transportation and urban vs. suburban or rural settings.)

Awareness of Public Water Access Site Close to Where You Live

Are you aware of any public water access sites close to where you live?
About how far away from your home is the closest public water access site in blocks, miles, or minutes? Just give it your best guess.

Residents of West Virginia and Pennsylvania are most likely to be aware of a public water access site nearby, while Maryland and DC residents are the least likely. White residents are more likely to be aware of an access site compared to people of other racial or ethnic backgrounds. Beyond those indicators, there is a strong relationship with socio-economics, with residents who are higher-income, more educated, or who have more reliable transportation being more aware of water access sites.

| Aware of Public Water Access Sites |  |  |
| :--- | :---: | :---: |
| State of Residence | Yes | No <br> or not sure |
| West Virginia | $69 \%$ | $31 \%$ |
| Pennsylvania | $63 \%$ | $37 \%$ |
| Virginia | $61 \%$ | $39 \%$ |
| New York | $60 \%$ | $40 \%$ |
| Delaware | $56 \%$ | $44 \%$ |
| Maryland | $53 \%$ | $47 \%$ |
| DC | $48 \%$ | $52 \%$ |
| Race or Ethnicity |  |  |
| Asian | $53 \%$ | $47 \%$ |
| Black or African-American | $52 \%$ | $48 \%$ |
| Hispanic or Latino | $52 \%$ | $48 \%$ |
| White | $63 \%$ | $37 \%$ |
| Reliable Transportation |  | $3 \%$ |
| Always | $63 \%$ | $37 \%$ |
| Mostly | $58 \%$ | $42 \%$ |
| Sometimes | $46 \%$ | $54 \%$ |
| Do not have | $41 \%$ | $49 \%$ |

## Convenience of Access to the Water

Somewhat more than half (57\%) of watershed residents feel they have convenient access to the water, agreeing with the statement, "There is convenient access to the water for boating, fishing, or swimming near where I live."

# There is convenient access to the water for boating, fishing, or swimming near where I live. 

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

2022
Impressions of the convenience of water access vary greatly by state. Residents of Pennsylvania were the most likely to affirm the convenience of water access near where they live, with nearly two-thirds (63\%) saying so. Virginia, New York, and Delaware followed closely behind. Meanwhile, DC and Maryland were least likely to feel they have convenient access to the water, followed by West Virginia.

The survey also identifies a large disparity by race or ethnicity. Fewer than half of Asian, Black, and Hispanic residents across the watershed believe they have convenient water access, compared to $62 \%$ of White residents.

There is convenient access to the water for boating, fishing, or swimming near where I live.

| State of Residence | Strongly <br> agree | Somewhat <br> agree | Total Agree | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Pennsylvania | $31 \%$ | $32 \%$ | $63 \%$ | $20 \%$ | $17 \%$ |
| Virginia | $28 \%$ | $33 \%$ | $61 \%$ | $24 \%$ | $15 \%$ |
| New York | $29 \%$ | $29 \%$ | $58 \%$ | $25 \%$ | $17 \%$ |
| Delaware | $28 \%$ | $30 \%$ | $58 \%$ | $29 \%$ | $13 \%$ |
| West Virginia | $32 \%$ | $17 \%$ | $49 \%$ | $30 \%$ | $21 \%$ |
| Maryland | $20 \%$ | $30 \%$ | $49 \%$ | $27 \%$ | $24 \%$ |
| DC | $15 \%$ | $27 \%$ | $43 \%$ | $25 \%$ | $32 \%$ |
| Race or Ethnicity | $20 \%$ | $28 \%$ | $48 \%$ | $32 \%$ | $20 \%$ |
| Asian | $20 \%$ | $29 \%$ | $49 \%$ | $29 \%$ | $22 \%$ |
| Black/African-American | $26 \%$ | $21 \%$ | $47 \%$ | $31 \%$ | $22 \%$ |
| Hispanic/Latino | $29 \%$ | $33 \%$ | $62 \%$ | $21 \%$ | $17 \%$ |
| White |  |  |  |  |  |

Feeling of Welcome: "I always feel welcome in parks and other public spaces around here."
Most people (69\%) said that they "always feel welcome in parks and other public spaces around here." Of those, $33 \%$ agreed strongly with that statement, while $36 \%$ agreed only somewhat.

The remaining $31 \%$ of the sample were more reserved or negative. Just over one in ten (11\%) disagreed with the statement, meaning that they do not always feel welcome in parks and other public spaces. Twenty percent were neutral or not sure.

## I always feel welcome in parks and other public spaces around here.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

2022
Residents who are not White are less likely to feel welcome in public spaces, as are those who are younger and less affluent.

I always feel welcome in parks and other public spaces around here.

| Race or Ethnicity | Strongly <br> agree | Somewhat <br> agree | Total Agree | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Asian | $29 \%$ | $33 \%$ | $61 \%$ | $17 \%$ | $22 \%$ |
| Black/African-American | $26 \%$ | $33 \%$ | $59 \%$ | $25 \%$ | $16 \%$ |
| Hispanic/Latino | $32 \%$ | $26 \%$ | $59 \%$ | $22 \%$ | $19 \%$ |
| White | $37 \%$ | $38 \%$ | $75 \%$ | $17 \%$ | $8 \%$ |
| Age <br> Less than 25 | $26 \%$ | $27 \%$ |  |  |  |
| 25 to 34 | $30 \%$ | $35 \%$ | $65 \%$ | $24 \%$ | $23 \%$ |
| 35 or older | $36 \%$ | $38 \%$ | $74 \%$ | $18 \%$ | $13 \%$ |
| Household Income <br> Less than $\$ 25,000$ | $27 \%$ | $33 \%$ | $60 \%$ | $25 \%$ | $8 \%$ |
| $\$ 25,000$ to $\$ 49,999$ | $30 \%$ | $37 \%$ | $68 \%$ | $21 \%$ | $15 \%$ |
| $\$ 50,000$ to $\$ 74,999$ | $32 \%$ | $39 \%$ | $71 \%$ | $18 \%$ | $10 \%$ |
| $\$ 75,000$ or more | $42 \%$ | $36 \%$ | $78 \%$ | $13 \%$ | $9 \%$ |

Sense of Belonging: "When I am in the parks or on trails near the water, I see other people like me."
An important indicator of belonging for people when they are in a new space is whether they see other people who they feel are similar to themselves. That sense that "other people like me" are in a space tends to make people feel more comfortable.

On the survey, nearly six in ten agreed with the statement, "When I am in the parks or on trails near the water, I see other people like me." That left a sizable number - more than four people out of ten - who either disagreed (14\%), or who said they were "neutral" or nor sure (29\%).

## When I am in the parks or on trails near the water, I see other people like me.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

2022
Socio-economics are an important indicator of whether people see others who they consider to be like them in parks or on trails. People from higher-income households were significantly more likely than those with lower incomes to agree with this statement.

When I am in the parks or on trails near the water, I see other people like me.

| Household Income | Strongly <br> agree | Somewhat <br> agree | Total Agree | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Less than $\$ 25,000$ | $14 \%$ | $35 \%$ | $49 \%$ | $34 \%$ | $17 \%$ |
| $\$ 25,000$ to $\$ 49,999$ | $16 \%$ | $38 \%$ | $54 \%$ | $31 \%$ | $15 \%$ |
| $\$ 50,000$ to $\$ 74,999$ | $21 \%$ | $42 \%$ | $63 \%$ | $26 \%$ | $11 \%$ |
| $\$ 75,000$ to $\$ 99,999$ | $22 \%$ | $44 \%$ | $65 \%$ | $23 \%$ | $12 \%$ |
| $\$ 100,000$ to $\$ 149,999$ | $23 \%$ | $45 \%$ | $68 \%$ | $22 \%$ | $10 \%$ |
| $\$ 150,000$ or more | $21 \%$ | $48 \%$ | $70 \%$ | $19 \%$ | $12 \%$ |

By race or ethnicity, White respondents were most likely to say they "see other people like me" when they are in parks or on trails near water.
When I am in the parks or on trails near the water, I see other people like me.

| Race or Ethnicity | Strongly <br> agree | Somewhat <br> agree | Total Agree | Neutral <br> or not sure | Disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Asian | $20 \%$ | $29 \%$ | $50 \%$ | $33 \%$ | $17 \%$ |
| Black/African-American | $15 \%$ | $36 \%$ | $51 \%$ | $29 \%$ | $20 \%$ |
| Hispanic/Latino | $24 \%$ | $26 \%$ | $50 \%$ | $30 \%$ | $20 \%$ |
| White | $19 \%$ | $43 \%$ | $62 \%$ | $28 \%$ | $10 \%$ |

As on the survey, most focus group participants said they did see other people like them when they are in public areas near the water. White participants tended to focus on characteristics such as their age or family status, or they simply saw what they considered to be a diverse environment around them:
"It depends on what you mean. With white people, sure. People my age, sure. Other people with autism, probably not." - White Focus Group Participant
"Yes. A lot of people. There's so many people you never know who you're going to see next. I've seen an elderly couple in their seventies. Okay?" - (Younger) White Focus Group Participant
"I guess I somewhat agree, because people are so diverse, I can't assume they have a lot in common with me, but we have to have something in common because we both clearly enjoy being out in nature and think that it benefits us in some way to be out there."

- White Focus Group Participant
"I interpreted that as people enjoy being outdoors, walking, taking in the beauty of nature. There's a sense of bonding. It doesn't matter how old they are, how young they are, what they look like. If they're out there enjoying the outdoors, out there enjoying being close to water, there's a natural presumption that they value the same things you value."
- White Focus Group Participant

People of Color in the focus groups tended to take a different view, noticing whether they felt like they fit in, and sometimes feeling negative attention or energy from others.
"When you come outside of your element, sometimes people are... The look that I get makes me feel uncomfortable to the point it starts to become a confrontation..."

- African-American Focus Group Participant
"Being that I live in a suburban (area), you kind of don't see a lot of Latinos near the lake. ... Most of the time it's either Asians or multiracial couples or Caucasians."
- Latino Focus Group Participant
"A lot of black people don't know how to swim." (Moderator): "Okay. Well that may or may not be true though." (Participant): "I don't know if that's a stereotype or not, but... I don't think a lot of people are interested in that type of stuff. But at the same time, I do see a lot of mixed races, but it just be majority white people inside of the water." - African-American Focus Group Participant

## Most Attractive Features of a Public Water Access Site

Residents across the Bay watershed were asked what features of a public water access site would most make them want to visit. They chose from a list of 20 possibilities, and were encouraged to "mark any that would appeal to you."

As illustrated below, about half of survey respondents listed restrooms (52\%), or a walking or biking trail (51\%), or a picnic area or pavilion (49\%) as compelling features for them. Parking (45\%) followed next.

Next were three amenities related to water activities: a swimming area (chosen by 38\%), a dock or pier (33\%) and a fishing area (32\%). These three water-related amenities were joined by festivals and special events (32\%).

Rounding out the top 10 were an access site that has good signage or is easy to find (29\%), and one that has a playground (28\%).

Features That Most Make You Want to Visit
Closed-Ended; Top 10 Chosen

What features would most make you want to visit a public water access site?
Mark any that would appeal to you.
The second tier featured the availability of food, boats and boating infrastructure, bicycles, and sports fields or courts. Also on the list and chosen by more than one in ten were "Someone to teach me about fishing, boating, and/or other water activities," a life vest borrowing station, and being near public transportation.

Features That Most Make You Want to Visit
Next Tier

What features would most make you want to visit a public water access site?
Mark any that would appeal to you.
People who are visiting public water access sites infrequently, only "a few times a year" (rather than monthly or more), are slightly more likely than average to be looking for restrooms, trails, picnic areas, and parking, as well as festivals and playgrounds. They are somewhat less likely than average to be looking for active water pursuits like a swimming area, dock or pier, or fishing area.

People who rarely or never visit water access sites today are less likely than others to be attracted by any of these amenities, and they are particularly less prone to respond to active water pursuits.

It does not have to be a remote getaway. For many people, especially those in urban settings or who are experiencing significant stress, a bench by the water that is easily accessible is all they need. A focus group respondent from Binghamton expressed the importance of taking a break by the water in the middle of her stressful workday:
"I worked in downtown Binghamton, and behind the building was a bunch of these benches that overlooked the river. And I'd go out on my break and would just kind of de-stress. I had a crummy
job. ...I would just sit there for my whole break, my whole lunch." - Focus Group Participant

## People Who Want to be Near, but not on or in, the Water

Confident, outdoorsy people in the focus groups just needed an access point, and typically preferred it to be free of people. But our focus groups were intentionally skewed towards people who were less confident in the outdoors, or who experienced or felt barriers accessing the water. For respondents such as those, there was often a desire to be near, but not in or on the water. Trails and benches, and perhaps picnic tables, were important for those participants.
"Nice sitting areas. Nice places where you can sit and just view the entire area. And just quiet area to relax." - Focus Group Participant
"For those that want to be by the water and not get in the water, just have other things like bike rental, or scooter rentals, things like that. People can enjoy being by the water. They don't want to get in the water or be in the water." - Focus Group Participant

A focus group participant from Upstate New York was typical of others who are less confident in the outdoors, but who want to spend time there. He is a young adult living with his parents, and who, by his own admission, spends too much time playing video games. Looking at this image of a water access site, he gravitated towards it, like many others in these focus groups did. He explained:
"It's not crowded, so it's more peaceful. It's got the picnic table ready so you can just pack up a nice lunch and bring some family or friends and just relax by the water. It looks like you could probably go fishing in that water possibly."

It should be noted this participant, who said he lived about five minutes from a state park with water access but had not been there in years, needs more than just a passive picnic table near the water. He needs an invitation to come. That suggests a need for programming and community outreach by the park facility, perhaps through partnerships with community organizations who can do the legwork of outreach and organizing activities.

## Evaluating the Public Water Access Site Closest to You

People who were aware of a public water access site relatively close to them were asked to assess what it offered. First, they were asked to list the features or amenities that it has. Parking (identified by 60\%), a fishing area (51\%), and a boat ramp (50\%) were most commonly chosen. Note of course that these numbers are based on what people observe or remember, so they are imperfect reflections of what the public water access site actually has.

A picnic area or pavilion (45\%), dock or pier (44\%), walking or biking trail (42\%), and restrooms (41\%) were also commonly chosen from the list.

Good signage or easy to find was chosen by only one-third (32\%). Roughly one-quarter said their local public water access site had a playground (29\%) or swimming area (24\%).

Features That Closest Public Access Site Has
Closed-Ended; Top 10 Chosen

Think about the closest (public water access site) to where you live. What features does it have?

Festivals, boat rentals, food, boating and other equipment and support were somewhat less likely to be identified, as illustrated below.

Features That Closest Public Access Site Has
Next Tier

Think about the closest (public water access site) to where you live. What features does it have?

2022
People who were aware of public water access sites located close to them were asked to rate the nearest one for three attributes, using a traditional A to F grading scale.

- Public water access sites received their best grade for being well-marked and easy to find, with twothirds (68\%) offering a grade of A or B.
- Next best was the assessment of safety, with $61 \%$ offering an A or B grade. That left more than onethird (36\%), whose assessment of the access site's safety is relatively poor, grading it C or lower (with the remainder unsure).
- Maintenance appears to be an issue at many public water access sites, with only $56 \%$ giving their closest site a grade of A or B for being "up-to-date and well maintained." About one in four gave their closest site a grade of $C$ or lower for maintenance.

## Grading the Public Water Access Site Closest to You

What grade would you give that public water access site for being...
...Up-to-date and well maintained?
...Safe?
...Well-marked and easy to find?
(continued, next page)

2022

## Frequency of Visiting a Public Water Access Site

A good share of the public appear to be visiting public water access sites. When asked, "In a typical year, how often do you visit a public water access site for any reason when the weather is good, even if you don't go on or in the water?" about four in ten (41\%) said they are visiting an access site at least once a month. One in five watershed residents (19\%) said they visit at least once a week.

Over and above those relatively frequent visitors, another 29\% said they are visiting an access site "a few times a year." That leaves $25 \%$ who are seldom or never visiting, and $5 \%$ who are not sure.

## How Often People Visit a Public Water Access Site

In a typical year, how often do you visit a public water access site for any reason when the weather is good, even if you don't go on or in the water?

The survey provides significant clues to what segments of the population are visiting public water access sites more frequently today, and what segments are less prone to do so. Segmenting the population by race or ethnicity, Latino residents are more likely than others to visit the water monthly or more. White and Asian residents are less likely to do so. Speaking a language other than English at home is not a deterrent; in fact, the survey indicates that non-English speakers are more likely than others to visit water access sites.

How Often People Visit a Public Water Access Site

| Race or Ethnicity | At least <br> once/week | Once or <br> twice/month | Total <br> monthly + | A few <br> times/year | Rarely or <br> Never |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Asian | $27 \%$ | $13 \%$ | $40 \%$ | $28 \%$ | $26 \%$ |
| Black/African-American | $25 \%$ | $20 \%$ | $45 \%$ | $24 \%$ | $26 \%$ |
| Hispanic/Latino | $23 \%$ | $26 \%$ | $50 \%$ | $23 \%$ | $24 \%$ |
| White | $17 \%$ | $23 \%$ | $40 \%$ | $31 \%$ | $26 \%$ |
| Spoken $a t$ Home <br> English | $19 \%$ | $22 \%$ | $41 \%$ | $29 \%$ | $26 \%$ |
| Another language | $25 \%$ | $27 \%$ | $52 \%$ | $21 \%$ | $22 \%$ |

Age is strongly correlated, with people under age 45 much more likely to visit water access sites, while people over age 55 are much less likely. The presence of children in a household also makes people much more likely to visit.

How Often People Visit a Public Water Access Site

| Age | At least <br> once/week | Once or <br> twice/month | Total <br> monthly + | A few <br> times/year | Rarely or <br> Never |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Less than 25 | $26 \%$ | $23 \%$ | $49 \%$ | $26 \%$ | $18 \%$ |
| 25 to 34 | $25 \%$ | $24 \%$ | $49 \%$ | $25 \%$ | $20 \%$ |
| 35 to 44 | $24 \%$ | $27 \%$ | $51 \%$ | $22 \%$ | $22 \%$ |
| 45 to 54 | $17 \%$ | $24 \%$ | $41 \%$ | $32 \%$ | $23 \%$ |
| 55 to 64 | $14 \%$ | $17 \%$ | $31 \%$ | $30 \%$ | $37 \%$ |
| 65 or older | $8 \%$ | $18 \%$ | $26 \%$ | $38 \%$ | $34 \%$ |
| Children in Household <br> Yes |  |  |  |  |  |
| No | $28 \%$ | $24 \%$ | $52 \%$ | $29 \%$ | $15 \%$ |

Proximity to public water access sites and reliability of transportation are also strong predictors of how often people will visit.

How Often People Visit a Public Water Access Site

| Nearest Public Access | At least <br> once/week | Once or <br> twice/month | Total <br> monthly + | A few <br> times/year | Rarely or <br> Never |
| :--- | :---: | :---: | :---: | :---: | :---: |
| 0 to 1 miles | $28 \%$ | $23 \%$ | $51 \%$ | $23 \%$ | $18 \%$ |
| More than 1 to 5 miles | $19 \%$ | $24 \%$ | $44 \%$ | $27 \%$ | $25 \%$ |
| More than 5 miles | $14 \%$ | $20 \%$ | $34 \%$ | $34 \%$ | $28 \%$ |
| Reliable Transportation |  |  |  |  |  |
| Always | $20 \%$ | $23 \%$ | $42 \%$ | $30 \%$ | $25 \%$ |
| Mostly | $24 \%$ | $25 \%$ | $48 \%$ | $26 \%$ | $22 \%$ |
| Sometimes | $16 \%$ | $18 \%$ | $34 \%$ | $30 \%$ | $28 \%$ |
| Do not have | $9 \%$ | $18 \%$ | $27 \%$ | $27 \%$ | $38 \%$ |

The dampening effect of limited transportation was described by a focus group participant who is disabled and lives in Fredericksburg without independent transportation. He finds it "therapeutic" to spend time near the water and feels frustrated when he cannot get there.
"I'm drawn to water, which makes it even more upsetting that I can't get there conveniently."

- Focus Group Participant

## Inducements That Would Make People Visit More Often

Survey respondents were asked what would cause them to visit a public water access site more often. The question was open-ended, and responses have been categorized as illustrated in the chart below.

The two leading responses are externalities - not things that planners or park managers could impact. Twenty-five percent of respondents said they would visit more often if they just had more time, and 13\% would visit more if they considered the weather more hospitable.

The next item, having a site closer to them or easier to access, could be addressed (at least for some residents) through the addition of new public access points.

Other items on this list one could imagine addressing through programming. Seven percent said they would be more likely to visit if there were events or activities. Six percent would be more likely to visit if they had someone to go with, a concern that programmers might help address through organized group activities that would attract like-minded people.

# What Would Cause You to Visit a Public Access Site More Often 

Open-Ended; Top 10 Ideas Mentioned

What would cause you to go more often? (Open-ended. Categorized responses shown.)

## Barriers to Visiting

Survey respondents were asked to identify key barriers, or "reasons why some people don't spend much time on the water or near the water." They chose from a list of 16 possible barriers.

Two barriers led the list: "I don't have enough time" (chosen by 32\%), and "mosquitos and other pests" (also $32 \%$ ). Underscoring the social nature of the experience, a sizable number said, "I want someone to go with me" (28\%).

Meanwhile, 20\% perceive that water access sites are too crowded. About one in six (17\%) feel they "don't have access to the equipment I would need - like a boat or fishing gear." Sixteen percent perceive that the water is too polluted.

Others raised practical, personal concerns including health problems (16\%), can't swim (14\%) and simple lack of interest (13\%).
"We've never really learned how to swim, basically. And it's always been a fear."

- Focus Group Participant

Barriers to Spending Time on or Near the Water
Closed-Ended; Top 9 Chosen

Here is a list of reasons why some people don't spend much time on the water or near the water. Mark any that describe you.

Lack of time is a major barrier. This young adult focus group participant described the impact of all her new responsibilities to her house and pets:
"Time is definitely a big factor because I could very easily go to the river and look at it for five minutes, but what's the point in that? If I'm going to go to the river or to the national park, I want to spend time there and it's hard to find a whole day where I'm available... There's so much responsibility as an adult that it's hard to make time to do things that are just for pure enjoyment, that might be more than an hour or two." - Focus Group Participant

This suburban focus group participant felt reluctant to visit the water because he did not have anyone to spend time with:
"The way I'm not included is I'm alone, don't have a family, not married. Most of the people are there with someone. Occasionally I'm with a friend, but in that way I'm very different. They have a group with them, a family, something like that. I don't have family. So in that way I'm different." - Focus Group Participant
(continued, next page)

2022
The next tier of this list of barriers includes perceived cost, lack of transportation, lack of water or water access near where people live, and lack of confidence near the water or a sense that the experience would be unsafe. Lack of welcome appears low on this list.

Barriers to Spending Time on or Near the Water Next Tier

Here is a list of reasons why some people don't spend much time on the water or near the water. Mark any that describe you.

Asked in an open-ended way if there is "another reason that keeps you from spending time on or near the water," a similar list of barriers emerges. Lack of time is far and away the leader. Difficulty getting to the access site and health concerns are next. Lack of interest follows.

## IV. THE POTENTIAL FOR WATER ACCESS TO FOSTER ENVIRONMENTAL STEWARDSHIP

This chapter explores the relationship between water access and stewardship behavior. Several relevant attitudes are measured: the desire to do more for local waters, the feeling of personal impact from water pollution and personal responsibility for it, the motivating impact of being near the water, and knowing some things one can do to help. Concluding this section is a narration of key findings from the in-depth interviews, which explored the impact of being near the water on people's stewardship behavior.

## The Desire to Do More to Help Make Local Waters Healthier

A large share of the general public is motivated to help make local waterways healthier. Sixty percent of watershed residents interviewed in the survey agreed with the statement, "I want to do more to help make local creeks, rivers, and lakes healthier."

## I want to do more to help make local creeks, rivers, and lakes healthier.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

While the motivation is widespread, there is a subgroup that is especially motivated - the almost onequarter ( $22 \%$ ) of the public who strongly agreed with the statement. There is a close relationship between frequency of water access and the strength of motivation to help restore local waters. Similarly, the ability to both picture and name the water closest to home is related to the strength of motivation to help restore those waters.
I want to do more to help make local creeks, rivers, and lakes healthier.

| Frequency of Water Access | Strongly <br> agree | Somewhat <br> agree | Total Agree |
| :--- | :---: | :---: | :---: |
| Almost every day | $45 \%$ | $21 \%$ | $66 \%$ |
| At least once a week | $32 \%$ | $39 \%$ | $71 \%$ |
| Once or twice a month | $28 \%$ | $37 \%$ | $66 \%$ |
| A few times a year | $20 \%$ | $45 \%$ | $66 \%$ |
| Less often or never | $11 \%$ | $36 \%$ | $47 \%$ |
| Picturing Nearby Water |  |  |  |
| Can picture and name it | $26 \%$ | $44 \%$ | $70 \%$ |
| Can picture but not name it | $21 \%$ | $35 \%$ | $56 \%$ |
| Cannot picture nearby water | $18 \%$ | $29 \%$ | $46 \%$ |

2022
Intentions are good, as evidenced by this $60 \%$ who want to do more to help. But several focus group participants explained that they were not doing more because they worried that their own efforts would be quickly undone by other thoughtless people coming behind them.
"I don't know what I, personally, as an individual would be able to do to make the water healthier because my one effort could be undone by maybe, 20 other people."

- Urban Focus Group Participant
"I would volunteer, but what bothers me about it is that we need to make some laws and be able to report people while we're cleaning up that they're littering, because what's the point of going out there if they're just going to replace (the litter)? ... There's no sense going out there and cleaning up and then you come back the next week and there's more than when you first started." - Suburban Focus Group Participant

Out of all the focus groups - which were intentionally recruited to hear from people who are less connected with the water and the natural environment, the young urban focus group was most activated to take steps to help protect the environment. Most participants listed actions they take, such as picking up other people's litter or dog poop, and participating in community clean-ups. Even this group, which may have exhibited more stewardship tendencies than any of the other six focus groups, admitted that the problem seems too big for one person, and they were much more motivated to help if they could do things in a group.

## Feeling Like You Know What You Can Do to Help

Knowing what to do to address water pollution is a step on the road to becoming active. About half ( $52 \%$ ) of the public across the watershed believe they "know some things I can do to help reduce water pollution where I live." Only about one in sixth residents (17\%) strongly agree with this statement, suggesting that specific knowledge of stewardship actions is somewhat limited.

## I know some things I can do to help reduce water pollution where I live.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

There is a socio-economic relationship with this question, with residents of higher-income households, and those with more education, more likely to say they know some things they can do to help reduce water pollution.

2022

## Recognition That Being Near the Water Makes People Want to Protect It

More than six out of ten watershed residents (61\%) agreed with the statement, "Being near or on the water makes me want to do more things to protect it." Many of the remainder (28\%) were neutral or not sure, leaving only $12 \%$ who disagreed.

# Being near or on the water makes me want to do more things to protect it. 

For each of the statements that follow please say if you
strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

This statement bears itself out when looking at the responses of people who visit public water access sites more frequently, and those who can both picture and name the water closest to their home. Agreement with the statement grows along with the strength of people's relationship with the water.

Being near or on the water makes me want to do more things to protect it.

| Picturing Nearby Water | Agree with <br> the statement | Neutral <br> or not sure | Disagree with the <br> statement |
| :--- | :---: | :---: | :---: |
| Can picture and name it | $73 \%$ | $21 \%$ | $6 \%$ |
| Can picture but not name it | $55 \%$ | $28 \%$ | $17 \%$ |
| Cannot picture nearby water | $43 \%$ | $41 \%$ | $15 \%$ |
| Visit the Water... <br> At least monthly |  | $19 \%$ | $13 \%$ |
| Rarely or never | $69 \%$ |  | $15 \%$ |

Note that agreement with this statement also rises with household income and educational attainment, and agreement is stronger among residents over age 35, dropping off significantly among residents under age 25.

## The Feeling That Individuals Can Make a Difference

A key measure of the potential for stewardship behavior is the agency people feel about their own actions. If they engage in stewardship actions, will it make a difference?

About half the public responding to the survey (51\%) disagreed with the proposition, "Individual people like me can't do much to help fix water pollution." That leaves one-quarter of the population (25\%) that feel there is little they can do personally to make an impact on water pollution, and another one-quarter (24\%) who are not sure.

## Individual people like me really can't do much to help fix water pollution.

Feelings of personal agency are slightly stronger among more affluent and better-educated people, and slightly weaker among lower-income residents and People of Color.

## Feeling Personally Impacted by Water Pollution

More than half the public feels personally impacted by water pollution. Fifty-six percent agreed with the statement, "Polluted water affects me personally." One-quarter of residents (26\%) strongly agreed that water pollution impacts them.

## Polluted water affects me personally.

For each of the statements that follow please say if you
strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

Feelings of impact are fairly similar regardless of race and ethnicity and socio-economics. Residents of Pennsylvania and Virginia, and older residents, are slightly more likely to feel impacted than others. But like the prior question, the strongest relationship is with frequency of access to the water, with more frequent users of water access sites much more likely than others to feel impacted by water pollution.

| Polluted water affects me personally. |  |  |  |
| :--- | :---: | :---: | :---: |
| Frequency of Water Access Strongly <br> agree Somewhat <br> agree Total Agree <br> Almost every day $48 \%$ $17 \%$ $64 \%$ <br> At least once a week $30 \%$ $30 \%$ $60 \%$ <br> Once or twice a month $32 \%$ $31 \%$ $63 \%$ <br> A few times a year $24 \%$ $32 \%$ $56 \%$ <br> Less often or never $20 \%$ $28 \%$ $47 \%$ |  |  |  |

## Awareness That One's Own Actions Contribute to Water Pollution

When it comes to feeling responsible for helping to create water pollution, only a small share of the public feels a sense of personal responsibility. The vast majority of residents do not feel that they are contributing to the problem of water pollution through their own actions. Only $28 \%$ of residents across the watershed agreed with the statement, "My actions contribute to water pollution where I live." Fortythree percent outright disagreed, while the remainder were neutral or not sure.

My actions contribute to water pollution where I live.

For each of the statements that follow please say if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree.

Several focus group participants reflected the impression that their actions do not contribute to water pollution.
"I disagree. I can't think of anything that I do, personally, that would contribute to water pollution. I just disagree." - Focus Group Participant
"I smoke cigarettes. That's pretty much it. But I don't really litter inside the water."

- Focus Group Participant

Other people are more aware of their impact. Awareness that one's actions contribute to water pollution is directly related to the intention to take stewardship actions. When people agree that their own actions contribute to water pollution, they are much more likely to want to do more to help make local waters healthier. The relationship is striking: more than half (54\%) of people who strongly agree that their actions contribute to water pollution also strongly agree that they want to do more to make local waters healthier.

My actions contribute to water pollution where I live.

| I want to do more to help <br> make local creeks, rivers, <br> and lakes healthier. | Strongly <br> agree | Somewhat <br> agree | Neutral <br> or not sure | Somewhat <br> disagree | Strongly <br> disagree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Strongly agree | $54 \%$ | $19 \%$ | $14 \%$ | $17 \%$ | $26 \%$ |
| Somewhat agree | $25 \%$ | $50 \%$ | $26 \%$ | $40 \%$ | $33 \%$ |
| Total Agree | $79 \%$ | $69 \%$ | $40 \%$ | $57 \%$ | $59 \%$ |
| Neutral or not sure | $14 \%$ | $20 \%$ | $41 \%$ | $30 \%$ | $28 \%$ |
| Somewhat disagree | $4 \%$ | $8 \%$ | $6 \%$ | $10 \%$ | $4 \%$ |
| Strongly disagree | $3 \%$ | $3 \%$ | $3 \%$ | $3 \%$ | $8 \%$ |

## Focusing on the Transformation in Stewardship

The final phase of this research consisted of individual in-depth interviews. These exploratory conversations were 45 minutes in length and focused on attitudes about water and the outdoors. Individuals were selected who exhibited a change in their attitudes and behaviors over their lifespan. The mission of these interviews was to investigate whether there was an inflection point that fostered greater stewardship in them, and the impetus that brought about that change. In particular, the impact of access to the water was explored.

Several exhibited a distinct turning point, while for others the journey was much more gradual. Briefly, these are the stories where a turning point can be detected.

## Jessica: A kayaking class changed her relationship with the water.

Jessica lives in the first-ring suburbs near Baltimore. When she thought of water, she thought of the Inner Harbor, which did not inspire her. The turning point came when she signed up to try canoeing through a local nature center. In time, that activity got her out on the water regularly, and transformed her relationship with nature.

This is how she feels when she kayaks:
"I think it's really peaceful. Especially sometimes when I'm kayaking alone, it feels like I'm the only person out there in small creeks or whatever. Yet to me, it's more relaxing than an exercise. I don't necessarily see it primarily as a form of exercise, more something that's peaceful and relaxing."

The stewardship intention has been encouraged by her contact with the water:
"I definitely care more about the water because I'm in the water kayaking."
"Before I kayaked, I didn't interact with the local waterways, so they were just something that kind of existed. I mean, it didn't really matter how dirty it was or trash-filled because it wasn't something I ever thought about... Since I started using the waterways, I mean, I want them to be decent. I don't want them to be disgusting if I touch the water or I don't want trash around it or in it because that's just not enjoyable, so I'd like it to be in good condition."

But Jessica goes on to identify a gap that is preventing her from taking stewardship actions on behalf of the water:
"I don't really know what I can do individually for the water. I mean, I do care about the conditions of the water, and it's disappointing when there's an area I go to and it's dirty or it has a lot of trash around it or something, but I mean, I don't really know what I would do to help the water, I guess."

2022

## Sarah: Finding community in the outdoors.

Sarah, a young adult who recently moved to Scranton, pointed to her love of hiking. For her, hiking in remote areas translates into a love of nature and concern about human impact. Note that her comments are not water-related, but indicate a broader appreciation of the environment.
"When you asked initially what has changed, for me it's been at points in my life very revitalizing to be outside, to take long hikes. I did a backpacking trip a few years ago that was quite impactful.
These types of experiences, for me, just have instilled more of an appreciation of that. I don't like the idea that one person's laziness could take that away from everyone else."

Finding a sense of community around outdoor activities is a key to getting out there on a regular basis, Sarah said.
"I also enjoy going as a group. I think events, activities that grow a sense of community could be that magic sauce as well. ...I was part of a running group. It became not just working out, but it became friends I had. Once you're part of that community, it was basically, you would just show up and run a couple times a week. It made me just so excited to go every time, even if it was not the best day for me or something else was going on in my life."

Sarah pointed out that, based on her friendships, you must start with a predisposition to stewardship. Just being exposed to the outdoors is not enough in her opinion.
"I have seen some people that, whether friends or even just acquaintances, that don't care at all. ...My impression is that, at least from people I've encountered, is there's not necessarily a cause-andeffect relationship with being outside and having an appreciation for environmentalism or just more broadly, natural spaces. But I think if that potential is there, then being outside can invigorate it, can make it stronger, can incite more of a desire to protect those places."

## Ivy: An urban transplant became increasingly concerned about human degradation.

Ivy moved to Baltimore from Connecticut 16 years ago, and she immediately was struck by the amount of litter and garbage she saw around the city. She enjoys walks through Herring Run Park or along Lake Montebello, but is increasingly bothered by the amount of trash she sees - which is made more evident after a storm.
"It's just like this, I don't know, like a reflex for some people, you just throw garbage down. So then if you see the storm drains, there's always... It's not sticks and stones, no, it's freaking containers from 7-Eleven pizza, little slice boxes and...it's just straight diapers. Like, really?
"Then you could see it more because as the storms, I feel like storms and things are getting stronger. And so when you see the storms coming, and then in the middle of the street after the storm is gone, it's just a whole pile of garbage that the storm drain is clogged up. The garbage is just right there in the middle of the street, and it's just like, 'Seriously? Do you know where this water is coming from?'
"And then even when I walk, Herring Run Park, they have a stream and stuff like that, so people could fish, but it says, 'Don't eat it.' There's signs. It says, 'Be careful of the water.' That's kind of scary."

These experiences have led Ivy to an "epiphany," causing her to think how precious water is, and how the plastics that people are dumping are ending up in the food supply. This came to a head for Ivy during the pandemic, when her concerns about plastics met her limited household budget, and she made up her mind to change her own behavior.
"I used to buy bottled water a lot, but I feel like that's kind of wasteful too, because then you're just drinking this plastic bottle where we have tap water, and we have a filter, and I have the fridge with the filter. So just use a reusable thing, because all that plastic, it has to go somewhere. And I know that plastic doesn't break down and it's still going to seep into our body some kind of way. So I'm more mindful of that."
(Interviewer): "When did that change? When did that happen, that shift for you?"
(Ivy): "I feel like the pandemic, honestly, because I had more time to sit still and think about everything. And when the pandemic first hit, money, I'm watching money like, 'This is stupid. Why am I buying (bottled water)?""

Ivy, who is African-American, wants to feel connected to the environmental movement, but said she does not feel adequately represented. She advises organizations and agencies that are trying to reach out to think about representation.
"Find people that represents that organization... that look like the people that you want to come. ... Black people do fish. Black people do kayak. Black people do everything that everybody else does, but we have to (demonstrate that)."

## Renae: Having children of her own transformed her thinking.

Renae grew up in Fort Washington, Maryland, where she was near the water every day. She described her childhood as an adventure. But she did not ever think about doing her part to restore and protect the water until she had children of her own and started thinking about pollution impacting them.
"I don't think I thought about it, the condition of the water when I was growing up. So I didn't think about the trash or the quality of the water, the safety of the water when I was growing up. I didn't think about any of that stuff. But now that I'm an adult and my kids are going out into those spaces, I do care when I see lots of trash. I do care when I see the water's extremely murky or there's people doing things in the water, throwing things in there. I do care. Now I care to the extent of I'll pick up some trash here and there, or in my mind I'll mentally take a note of how bad things look."

Renae described herself becoming a steward. But she wondered if her sense of caring for a particular outdoor place translates to the environment more broadly. She said her sense of stewardship might be limited to places where she has direct contact and a sense of ownership.
"I do think it'll make them want to enjoy that particular space more. But I do question, will it translate to all other bodies of water? So if I go to this one little lake, this is our lake, we do all the things here, am I going to want to take care of someplace else where I've never been and (never) think about that place?"

## Justin: Realizing the therapeutic effect of being near water during a difficult time in this life.

For Justin, a resident of Richmond, the transformation came at a low moment when he could not find a job after college. He discovered the soothing and clarifying qualities of just being near the water. As this effect dawned on him, he conducted an experiment to clarify for himself whether it was the run, or the water.

[^0]breath. And you started just having these moments of, 'Man, I feel better.' But you're thinking it's just a nice little run... And then I kind of tested that theory...(Y)ou go by the water and you get a chair, you sit for three or four hours by it, or you put your feet in the water, and then you realize the difference. And it's like, 'Okay. It is the water. It's not me just making it up.'"

This is how Justin described the effect of running by the water:
"I would say it freed my mind. Because you're running, you might think about your knees hurting a little bit. You might think about trying to catch your breath. ... But for that moment, that 30 minutes or that hour, you can just clear your mind. And then maybe that helps you unlock some things."

This appreciation of the water has not translated into stewardship action for Justin. That connection has not yet been made for him. Asked if his love of the water is translating into any personal actions, Justin said:
"I guess at the present moment, probably no. At the present moment. Because I'm busy. Any special step or project, I'm probably not right now, if I'm being honest."

## Jamie: Angered by dumping and concerned about his dog.

Jamie grew up spending time along the James River. But he only learned to value it as an adult, after going to college in Arizona where the relationship with water is completely different. Arguably, the foundation of contact with the water as a child makes him view it nostalgically as an adult.
"I think I took it for granted as a kid. As a kid you just live free and a bit wild and try to have fun. But when I came back not having a river, it definitely made me appreciate it."

Back in Richmond, Jamie has resumed his relationship with the river. He described being upset by the trash and litter that he sees along the banks of the James. It fosters a sense of responsibility in him.
"We have to take care of what's ours in order for it to last as long as we want it to. It's like anything else in life, you have to take care of it."

He worries about his dog, who jumps into the James River. His dog suffers from cancer, and he wonders if pollution in the river contributed to his dog's illness.
"I'd say having an animal who I walk along - we take him on walks through several parts of the James - definitely makes me (concerned), because he jumps in and I want to make sure obviously that it's sanitary enough for him to get in and get out and not have some bacterial disease or anything like that."

But a formative experience that super-charged his concern was seeing a huge load of trash wash up on his family's Bayfront property, which he suspected came from a cruise ship. The experience of cleaning it up was awful, and made him angry.
"There's just trash coming onto my beach basically and it's not just a little trash. It took probably a week just to clean up all of it. That was probably my wham bam moment. That happened maybe three years ago. That definitely woke me up about taking care of our waterways and our water systems in Virginia."

Jamie's advice to park managers and public agencies: there needs to be more public water access.
"A lot (of the water access) around my area is all private. You're cutting off individuals the opportunity to take advantage of something that should be free."

## Sheri: Working to recreate her own childhood experiences for children from low-income households.

Sheri learned to care for the Bay from an early age by going on field trips. Asked if there was water she had an emotional connection with, she said:
"That is the Chesapeake Bay for me. I am born and raised in Baltimore City. I went to school in Baltimore City. I was a teacher in Baltimore City, a principal in Baltimore City. So there were field trips all my life to the Bay. We got on a (ship called) Port Welcome. So it's been a part of my life forever. And I've seen it go from a place where it was fun and an educational experience, to it being the trash that it is now."

Visiting the Harbor herself as a child, she realized the importance of having that contact with the water. As a teacher and ultimately a principal in Baltimore City, she encountered many low-income children who had never seen the Harbor, and made it a point to include that experience in her curriculum. She wanted to pass along that caring and connection to the water to her students.
"And I can remember as a second-grade teacher, and literally the school was 15 minutes from the Inner Harbor. Students had never even been to the Inner Harbor or seen water. And I was a little older and I had become a mother by then. So that meant a lot to me, that it was second nature for me to take my son. It was just what we did on the weekends. But the students that I was a teacher, they had never experienced it."

One of her fondest memories as a child was packing a lunch and eating it by the Bay. She wanted to share that with her students.
"And (cantaloupe) was my favorite fruit. And I can just remember sitting by the water and all of us having lunch (as a child). And so then that became a personal thing for me. So every year I made sure we went to the Inner Harbor to eat lunch by the Bay and I would make fruit salad and share it with my class."

Throughout her career, Sheri has a driving motivation to share her love of the water with children who were able to have very few experiences in nature.
"Them knowing that beyond the wall where they were, there was a life. That there was something beyond the wall of the projects that they lived in. Nobody talked to them about that. And for some of them, their families didn't go that far."

Regular contact with the water is important. Sheri described a shift in her priorities when she moved to the suburbs, further from the water.
"I will tell you that my feelings, I don't think that they changed, but my focus shifted, once I was no longer, I didn't see the water every day because now I lived in the suburbs. And you kind of get away from it because it's not in front of me anymore."

## Valentine: Focus group discussion ignites the flame of stewardship.

Last is the story of Valentine, a focus group participant who experienced an awakening in real time, right before our eyes. Valentine is an African-American man, a poet, and an artist of modest income, who lives near downtown Harrisburg. He loves walking to the riverfront and sitting on a bench, watching the sunset, gazing at the water.
"That is specifically why I got the spot that I got down here, is because it was the first area that attracted me when I moved to Harrisburg over 10 years ago. It was where I used to like to take my journal and go journal.

Valentine has a love of the Susquehanna that you can feel. He is moved emotionally by the experience of being near the water, and makes it a part of his daily routine.
"This picture (showing a picture from his phone), it's from the riverfront a week ago. This just sums it all up. I like the way that the sun... It's showing the sun setting. ...It does do something. It makes you feel a certain way... it brings a calming effect to you. I just love everything about it. It just takes my mind in a spiritual place that gives me a piece of serenity."

Late in the focus group, reflecting on the discussion about water access, and the potential that might create for stewardship action, Valentine had a dawning realization.
"(This discussion) has given me the... Opened up my ways and my thought process to things, to areas that I wasn't thinking about before. And I can honestly say that I benefit from my little bench or little steps down by the waterway. When I go down with my journal, I benefit from the effect of the water and what it does for me. So why wouldn't I want to give back and improve? You know what I mean?"

Valentine continued, explaining that he understands the feeling he gets when he is by the water, and he seeks that out. But he allowed that he has been "taking this for granted...nature." And he continued:
"But I don't ever do anything for it. And more than likely, I subconsciously do things that hurt it and deteriorate it without even knowing it. So having come to the fact that here's us, six or seven people in this panel, and none of us know each other, but we all get a great feeling from it. We all enjoy it to a degree. So I'm saying to myself, 'Oh man, we all work different, we all do things different, but we all enjoy it.' What can I do? I got to be more mindful of what do I do to ensure that it's at a state where other people will enjoy it. I don't want to destroy it. I don't want to deteriorate it. I want us all... We all do. I want us all, I want others to come to the same realization that I did."

## Concluding Thought on Stewardship: Access to the water is not enough. It takes a little nudge.

These stories illustrate a diversity of ways that people emerge into stewardship: by being confronted with litter or dumping, out of concern for the safety of children and pets, by trying the activity of kayaking or hiking, or by simply running along or sitting beside the water and feeling the emotional impact.

But one thing was consistent across these stories. Stewardship rarely just happens with exposure to the water. According to the descriptions of these study participants, there is an event, an opportunity to think, the influence of a teacher, the support of a community that sparks stewardship. Exposure to water is a starting point, but for most people it is not sufficient to foster stewardship. Something more intentional needs to occur for awareness to turn into stewardship action.

2022

## RECOMMENDATIONS

This study results in several high-level recommendations for improving public water access for underserved population segments, and for making a better connection between water access and personal stewardship. It should be noted that the mission of this study was not to assess where new access sites should be placed, but rather to focus on the characteristics of public water access sites existing and new - that will attract and engage people who have traditionally been less connected with the water, and to explore the potential to foster stewardship behavior in them.

With that mandate in mind, we offer these recommendations:

## 1. Prioritize investments in infrastructure:

- Benches and picnic tables
- Trails near the water for walking, running, and biking
- Restrooms

Infrequent visitors and underserved populations in this study indicated that they generally wanted to be near, but not on or in, the water. Simple investments in spaces where people can gather and picnic, kick around a soccer ball, or simply walk or sit by the water are the most desired assets of public water access sites. And as the sponsors of this study know well, restrooms are important.
2. Experiment with education and engagement programs at access sites:

- Proactive outreach to communities
- Community involvement in planning and programming
- Consider transportation gaps
- Guides and educators onsite
- Interpretive signage with a focus on stewardship

Among the infrequent visitors and underserved populations we interviewed, key barriers emerged: lack of reliable transportation, lack of people to go with, inability to swim or fear of the water, lack of people like me.

Furthermore, this study identified relationships between water access and stewardship, but clarified that access is not enough to foster stewardship. People need the spark, the connection to stewardship to be made explicit, the knowledge of the stewardship action, and the encouragement that their individual action will make a difference.

Park managers and others who wish to attract and engage underserved audiences will need to listen to community members about their preferences, and will design programming accordingly.

Once onsite, infrequent visitors - and frequent ones - should be engaged through signage, programming, and personal interactions to help make the connections with stewardship.
3. Extend a sense of welcome and belonging:

- Staff and volunteers who reflect the characteristics of the community
- Reflections of the community in public art
- Telling the stories of local residents and cultural history

Though most people in this study said they feel welcome in public spaces near the water, a substantial minority do not. Seeing staff and volunteers who feel familiar to them, who reflect their own sense of identity, is important. More subtle cues conveyed through public art and respect for local cultural and history are meaningful to visitors.

## 4. Gain an understanding of who is visiting, and who is not visiting:

- Simple data collection from visitors: characteristics and preferences
- Regionally, development of a personas model

Public water access sites that are staffed should make a practice of intercepting their visitors and asking a few simple questions to understand their characteristics and tastes. A survey instrument could be designed regionally and made available to all sites, and data could be examined locally.

More ambitiously, the Public Access Workgroup may want to construct a personas model, which is a detailed examination of the animating characteristics and preferences of key segments of the population. This exercise, which is a staple for large constituent organizations and customer-focused corporations, helps staff think about the public in a much more personal way, understanding their likes and dislikes and what motivates them.
For both of these tools, the Workgroup would want to engage an experienced consultant.

On behalf of our entire team, thank you for the opportunity to undertake this important work. We stand by ready to offer additional interpretation and practical application of these findings as needed.

## Outdoor Activities

2. How often do you do any of these things? Use this scale: frequently, occasionally, rarely, or never. (Randomize list.)
A. Canoe, kayak, paddleboard, or sail
B. Powerboat, water ski, or jet ski
C. Swim or wade in local rivers, creeks, or the Bay
D. Swim in a pool
E. Go fishing or crabbing
F. Hunt on land or water
G. Bike on trails in parks or natural areas
H. Get outside and go for walks
I. Picnic or just relax outdoors
J. Sit or walk near the water
K. Birdwatch and view wildlife

## Key Attitudes

11. For each of the statements that follow please indicate if you strongly disagree, somewhat disagree, are neutral, somewhat agree, or strongly agree. (Randomize statements.)
A. There is convenient access to the water for boating, fishing, or swimming near where I live.
(Asked on 2017 Baywide Stewardship Survey.)
B. My actions contribute to water pollution where I live.
(Asked on 2017 Baywide Stewardship Survey.)
C. Polluted water affects me personally.
(Asked on 2017 Baywide Stewardship Survey.)
D. I want to do more to help make local creeks, rivers, and lakes healthier.
(Asked on 2017 Baywide Stewardship Survey.)
E. I know some things I can do to help reduce water pollution where I live.
(Asked on 2017 Baywide Stewardship Survey.)
F. Being near or on the water makes me feel happier.
G. Being near or on the water makes me want to do more things to protect it.
H. Individual people like me really can't do much to help fix water pollution.
I. Worrying about the environment is not a high priority for me.
J. I care about the Chesapeake Bay.
K. I always feel welcome in parks and other public spaces around here.
L. When I am in the parks or on trails near the water, I see other people like me.

## Public Access Sites

Next, we are going to ask you about places near where you live that are open to the public to access the water for recreation, like boating, fishing, or swimming. These are places that are on public land, like a city or state park, for example, and are open to anyone. Let's call these public water access sites.
12. Are you aware of any public water access sites close to where you live?
Yes. ..... 58\%
No ..... 25\%
Not sure ..... 16\%
(Asked of all, regardless of response to Q12):
13. About how far away from your home is the closest public water access site in blocks, miles,or minutes? Just give it your best guess.
Number: (Text box)

| I am worried about my finances. | I am worried about my mental health. |
| I can pays bills | Hitting the lottery |
| I continue to worry about COVID on a daily basis. | Inflation and higher prices is another daily worry. |
| I do not worry about anything in particular. I am comfortable and feel economically secure, and I am in reasonably good health. |  |
| I don't have money or a job and my teeth are rotting and i have a cyst in my neck and my mom got corona and is sick and my dad is old and sick | being homeless |
| I have IPF which is a terminal lung disease I was diagnosed with in January. I ask God every day to grant me as much more time that he can. I ask this not for me as I understand The Cycle of Life \& God's plan. I ask this for my family that I may be of service to them for as long as possible. TY | I worry about Our Country. If people don't wake up \& 'whatever' it is going to end up an authoritarian state w/ a dictator like Hitler, Stalin or Putin! |
| I have no worries or hopes |  |
| I hope and pray for my family | Health |
| I hope everyone I love stays safe and healthy |  |
| I hope everything will be fine. |  |
| I hope for a United country that recognizes the needs of all individuals and recognizes healthcare as a human right | I think about climate change |
| I hope for good health |  |
| I hope for peace every day | Love is what I think about |
| I hope I can get moved to a new town | I worry about my finances |
| I hope I can keep my home and pay bills on time | I think about my fantasy and the important things I need to know |
| I hope I have enough \$ to give my kids the life the deserve. I hope I have enough \$ to give myself the life I want | I hope things work out with my boyfriend |
| I hope i have enough energy to do my daily chores. | Being able to pay all my bills. |
| I hope I have money from day to day. And I worry if I'm going to have money from day to day |  |
| I hope I live a lot longer | my kids and grandkids and spending time with them |
| I hope I live to see tomorrow |  |
| I hope I make more money/worry I don't have enough. | Job stability |
| I hope I'll get a job soon | I hope my oldest daughter is happy |
| I hope I'm making the right choices | I'm thinking If the choices I made in the past will affect my future |
| I hope my children learn and get a Medication |  |
| I hope my children live long happy lives. | I hope salaries catch up to the cost of living |
| I hope my kids do well and are making all the right decisions and they are staying out of trouble and are healthy and happy | Make sure there is enough money coming in to provide for my family |
| I hope my kids have a healthy earth to enjoy for a long time. | My financial future and a hope I can one day retire. |
| I hope my son grows to have the best life | sure |
| I hope our soon to be born baby is healthy and happy. | I'd like to make more money |
| I hope that I live long enough to complete all of my scrapbooks and worry about having the financial resources to do so. | I worry about having infrequent contact with my kids and grandkids due to financial constraints. |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| I hope that I will be able to afford my own home | to be financially stable |
| :---: | :---: |
| I hope that I will earn some money |  |
| I hope that I will remain fortunate enough to live as comfortably as I do and worry that I may lose what little I have worked so hard to earn. |  |
| I hope that my daughter will find balance. | I'd like to live a long healthy life. |
| I hope that my health stays good so that we can keep traveling. |  |
| I hope that my health will get better and worry that it won't. | Sometimes I worry about having enough money in retirement. |
| I hope that nothing bad happens to my body physically. |  |
| I hope that social media goes away to save our society. | Criminals get harsher sentences. |
| I hope that someday I can move back to the home I grew up in | I'm worried about my ability to financially take care of my family |
| I hope that the COVID situation would go away | I worry that the Government would be come better |
| I hope that the people I care about stay healthy |  |
| I hope the world gets back to normal again. |  |
| I hope the world would be better to live for the next generation | Kids to have a greats life. |
| I hope this Russian attack of Ukraine end soon. | I hope the stock market will rise from the dead! |
| I hope to be able to open up a successful landscaping/handyman company. So I can take care of my loved ones. | I met this really amazing girl, I want to be in a committed relationship with her. |
| I hope to be able to retire early and enjoy life. |  |
| I hope to be healthy | Family |
| I hope to be successful in my career to have a better life | I worry I will fail and my dreams may never come true |
| i hope to become more successful in the future. | a family in the future. |
| I hope to get a new house and a new car | My children future |
| I hope to graduate and achieve my dreams |  |
| I hope to have my dream home one day. | I hope to travel more. |
| I hope to make all my payments on time | Health and happiness |
| I hope to make enough money to leave my children something. My fears are there is not enough time left to do this | my wife |
| I hope to never be a negative statistic. | Hope to purchase a new home. |
| I hope to never have another stroke. | To be around for a long time. |
| I hope to win the lottery to pay off my | Hopefully that I can live a good life |
| I hope Ukraine can return to normal |  |
| I just hope my family makes it another day. With Covid on the lose it's very scary | Financial |
| I just want this covid to go away so things can get back to normal | Just being in good health not to worry others about how I feel sometimes |
| I mostly hope for continued health. | I hope for peace of mind in general. |
| I mostly think about the health of my youngest child. | I think about the hope of having the chance to make lots of memories with my girls. |
| I mostly worry about the killing and the health and lives of our youths |  |
| I neither hope nor worry. I just slog along and do the best I can from day to day. | Maybe--the general lack of Common Sense among people. But it's not a 'worry.' It's disgust. |
| I often worry about money. I can never seem to save enough | I sometimes worry about my health. |
| I often worry that's my children are not going to have a future like I had the ability to get a good education and live well because the American empire is coming to a close and China is going to rule us and we'll basically be China's cheap labor now instead of the other way around. | I worry about inflation right now because Joseph rubbing it Biden is President and he is clearly senile and has a demented brain and doesn't know what's going on for his elbow from his butthole and so the country is going down the drain. |
| I pray that my dogs hip dysplasia will not get any worse and that he can live a long, happy, healthy life. |  |
| I put my hope and worry into the Lord |  |

| I worry about being tracked | Being single and a third wheel |
| I worry about climate change everyday | My future |
| I worry about covid 19 being here longer. | I think of getting more knowledge daily. |
| I worry about covid every day. I hope that things will improve in the US and the assault on Ukraine will end. I hope my own health with Crohn's will improve and one day I can be myself again. | I hope that LGBTQ+ will be treated as equals to heterosexuals. I hope trans children will never be hunted down like animals again. |
| I worry about dying | I worry about my finances |
| I worry about fascism and authoritarian governments ruining the world. | I worry about war. |
| I worry about finances all day. Always worried about money | I hope my children don't turn out like me |
| I worry about finances and food insecurity | Health |
| I worry about finances and not being able to provide for my family | I worry about my mental health |
| I worry about making ends meet. | Everything, literally. |
| I worry about money all the time. | Taking a vacation. Or not because we don't plan and budget for it. |
| I worry about my child's safety at school and health issues | My spirituality |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| I worry about my family |  |
| :---: | :---: |
| I worry about my family having enough money for bills. | I worry about my grandma's health. |
| I worry about my fiance's happiness and our future. | Money |
| i worry about my future |  |
| I worry about my health | Money |
| I worry about my health | my grandkids |
| I worry about my health failing and not being able to take care of my family | Money problems |
| I worry about my kids and my grandchildren, and my sisters kids their grandchildren. Somebody is sick all the time in different families. | I try not to but a lost lover i had over 20 years ago. we were great together. |
| I worry about my kids being safe at school the most. |  |
| I worry about my kids growing up with morals and being good people | My health isn't good and I worry about passing and leaving my kids behind |
| I worry about my mental health. | Being out of control |
| I worry about not getting love | Love |
| I worry about not having saved enough for retirement | I worry about certain chronic health issues and how they might affect in the future |
| I worry about nothing. I hope I wake up every morning |  |
| I worry about paying bills and still saving enough for retirement. | I hope for better health and newer medicines to help with my medical issues. |
| I worry about paying bills on time. | I always worry about money |
| I worry about the amount of money that I have on hand and I'm worried that I'm not able to make enough to get by Day to day | Am I really good enough to be alive |
| I worry about the bad things happening around the world and how many dishonest people there are |  |
| I worry about the cost of everything going up. I am retired and on a fixed income. If gas cost too much I don't travel. If electricity cost too much I have to cut my use of electricity. If food cost too much I have to eat less. | The politicians do not want to work together. Bad times for the USA and the world. |
| I worry about the current state of our economy \& inflation. My hope is that soon we can turn America around. | War |
| I worry about the rising cost of everything | I worry about the security of my retirement |
| I worry about the Russian invasion of Ukraine | The spread of the coronavirus worries me a lot too. |
| I worry about unexpected expenses outside of my budget | I hope for financial security for both myself and my daughters |
| I worry about what I'll do when my parents are gone. | I worry about whether or not my parents are proud of me. |
| I worry about what others think of me | If I will succeed in life |
| i worry about what others think of me | my appearance |
| I worry a lot about if my daughter will grow up okay and also if my marriage will fail | I often think about money issues and what will happen in the future |
| I worry and think the most about making ends meet with gas prices rising and inflation, the dollar is declining. | I think about the war in Ukraine and where all those displays people will reside as well as illegal storming the borders. |
| I worry daily about my cats' health and finances | Not doing what I want before I die |
| I worry how l'll move on in life since my boyfriend committed suicide |  |
| I worry I will never be happy. | I worry I won't have anywhere to live. |
| I worry most about my financial obligations. | I often think about upcoming project deadlines. |
| I worry on a daily basis about the covid virus and how it will all play out. | I often worry about people hungry in the United States. It just doesn't seem right. |
| I worry about everything |  |
| I worry that I will get my period in public |  |
| I worry that I will not have enough money to retire comfortably |  |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| I worry that I will not prosper in time before my family can feel like we finally recovered from bad times. | I have no feedback at this time. |
| :---: | :---: |
| I worry that I'll be all alone soon |  |
| I worry that I'm not doing enough with my kids and that they are missing out on moments that they might want. | I get excited that my investment activities may pay off one day. |
| I worry that my art skills are stagnated which cause me to not want to draw |  |
| I worry What if I just die today | How do I spice up my life |
| I would like to be a doctor |  |
| I'd worry that I stop living the life that I am living already. | I often think what is the number limit in 123's |
| If I can afford my rent | Does anything ever get better |
| If I can provide for myself |  |
| If I get a girlfriend |  |
| If I or my family will get hurt |  |
| If I will be alive to see/watch my 7 year old grandson grow | my grandson |
| If I will be pretty | If my life could get worse |
| If I will walk again without a cane | The future |
| If ill be able to pay my bills |  |
| if I'll ever find true love. | graduating with my Masters degree |
| If I'm going to die | When I'm going to eat |
| If My Family Is Ok |  |
| If my husband and I will be able to live on his SSDI income for too much longer. |  |
| If my kids are safe even with me around. | If we have enough money |
| If my neighborhood is safe |  |
| If the planet will still be inhabitable for my children | health care and the mess that it is |
| if we can keep up with bills | what I can do to making raising a family easier |
| if we'll have enough money for everything | worry about the health of everyone in the family |
| I'll be alone |  |
| I'll die |  |
| ill get a job | moving |

| The health of my family | Just life in general |
| the health of my family | the safety of my family |
| The health of my oldest daughter | The conditions of the world |
| The health of my wife. | Becoming a widower. |
| The health of the family | Inflation for the economy |
| The high cost of heating my home above 66 degrees. | The inability to put a balanced meal on the table due to the high prices and poor quality and/or availability of goods. |
| The hope for excellent health and prosperity for all. | The hope for security. |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| The hope for peace in the world. | My daughter going to college. |
| :---: | :---: |
| The hope I think about on a daily basis is that a new thing always happens here in fruitland | The schools are too crazy for the children to be going to |
| The hope of finding someone new and making my dreams finally one day come friend |  |
| The hope that I can give my estate to my niece | That everything I have worked for won't matter |
| the hope that I have daily is to live a more healthy life. | The other think that I hope for daily is for peace through the world and especially in Ukraine |
| The hope that I remain mobile as long as I'm living... | If what I do pleases GOD...... |
| The hope that I think about on a daily basis is to get more money and become rich. | Another hope I have is to have a good marriage and start a family. |
| The hope that we will be able to survive and continue to enjoy a good quality of life given the world situation and the pandemic | Security and issues that seniors face living on a fixed income |
| The impact of covid-19 pandemic on myself and those I care about. | Credit card debt and general debt based off of today's economy |
| The kids been happy | Heath |
| the most thing i worry about was the price raising on very thing now | raising prices |
| The need to earn more money. | That's by far the most important. |
| The only hope I have is being on a straight path before I die. | Yes, I do hope to have myself sane and successful. |
| The pandemic being over |  |
| The pandemic never ending | Job security |
| The pandemic. | The inflation problems. |
| The price of gas and groceries. I am retired and cannot afford the gas to go anywhere. I sit in my house. Going out would be nice. |  |
| the prices of food and gas also the people that won't get vaccinated |  |
| The Rates of inflation and rent relief | Covid |
| The rise of covid-19 again. | The Republicans are putting laws in place to stop people from voting. |
| The Russian invasion. | Why Trump is not in jail yet. |
| The safety and welfare of my children | Starting my own business |
| The safety of my children | Money and finances |
| the safety of my children and the way the country is turning out | guns |
| The safety of my family | Financial stability |
| The safety of my loved ones | I try to have no regrets |
| The safety of our children against predators. The hope that our country will soon get back on track. There is so much division | The corruption of our political system |
| The State of our country | My health |
| The state of out country. | Yes my family and their safety in this country |
| the suffering of the elderly people of the USA, Ukraine and the rest of the world | the suffering of family members |
| The technology has always been the focus of my work an appearance that attracts me |  |
| The thing I worry about the most on a daily basis is if I'll ever have enough money to live comfortably. | I wonder if the depression that I've been struggling with since a teenager will ever subside. |
| The war | Southern border |
| The war in Ukraine | climate disaster |
| The war on Ukraine |  |
| The wars and the price of stuff. | Gas prices |
| The way our president is destroying the country |  |
| the way the environment is being destroyed | that Rump might actually be elected again as President |
| The welfare of my parents. | Money |
| The world is coming to an end any day now. | Crime |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| The worries I have most is how I am going to pay my bills and get my heating bill paid | How I am going to get to the doctors |
| :---: | :---: |
| The worries I think about on a daily basis is how this world is turning out to be. I worry that my kids are not going to be prepared to handle disappointment, tragedy, bullying and everything that other people bring to this world. I am afraid that things will get bad and my kids will not know how to handle things. | I often think about the economy. Things are getting expensive and people are struggling to make end meet. |
| The worries is seeing people in the city. |  |
| The worry that i have is that everything is going to come crashing down. | I often think about death |
| Theft of personal property | Fires |
| There is hope in every day |  |
| There's not to much to worry about, all is well with me. I just continue to try to maintain and stay focused. |  |
| They hope I think about on a daily basis is the hope I'm alive by the end of the day |  |
| Things in life get better |  |
| Thinking of how others perceive me or think about myself | The current state of our nation |
| Time | Anxiety |
| time | earnings |
| Time |  |
| To be comfortable | My cats \& dog |
| To be happy to complete |  |
| To be successful |  |
| To buy a new car | Travel another country |
| To get out of debt. | Staying in good health. |
| To get rid of the covid virus |  |
| To grow as a person |  |
| to have a good relationship, and good job | good family |
| To keep healthy as I get older | having enough money to be able to retire |
| To keep praying and keeping my faith |  |
| To live |  |
| to live daily for God |  |
| To make money | Food |
| To make money |  |
| To make This world a better place |  |
| to move to an one story house handicap accessible | doctors letting me go back to church |

| Q20. What would cause you to go more often? |
| :--- |
| 80 degree weather all year long |
| A boat |
| A boat |
| a boat |
| A bus that could take me. |
| A car |
| A car ride, time |
| A cleaner river |
| a friend |
| A friend inviting me |
| A girlfriend |
| a less busy schedule |
| A longer hiking trail would be good. |
| A lot of things |
| A marked trail and signs. |
| A more cooperative toddler |
| a nice weather, especially on Summer time |
| A pavilion and picnic tables. |
| A person to go with me |
| A personal goal |
| A reason to go |
| A reason to go there. |
| A right mindset |
| A state park |
| A vehicle |
| A vehicle |
| Ability to boat on the water or swim in the area |
| Ability to park easily. |
| Ability to walk any more than 100 feet |
| Access |
| Access to a boat |
| Access to a boat |
| Access to personal transportation. |
| Access to rides |
| Access. I don't own a car. |
| Access. More free time. |
| Accessible, events |
| Activities |
| Activities other than water access, picnic areas maybe |
| Affordable food options |
| Afraid |
| Air quality |
| Allow more access to the lake besides paddle boats |
| Allowed to fish |
| Ambition |
| And important e vent |
| Anything |
| Anything a little closer. Our county is one of the few without any rivers. |
| Anything exciting and/or fun |
| Assurance that water was safe and that no disease-carrying insects were present |
| Availability of my friends that I friends with |
| Available time |
| available to go |
| Basketball court nearby |
| Basketball courts and activities |
| Bathroom and more things to do |
| beach |
| Beautification |

| Health |
| health |
| Health concerns |
| Health gets better |
| Healthier conditions |
| High tide flooding from storms |
| Higher income |
| Holiday |
| Homelessness |
| Hotness |
| Hours and days open |
| I already go to my beach house frequently. I spend two or three months there. |
| I am new to this area; not having too hot days |
| I came across this park only a few months ago and will visit again when the weather is warmer. |
| I do not think anything would. I just go whenever I want a change of scenery or to meet friends. |
| I don't care much for the water. |
| I don't do no kind of water |
| I don't know what a public water access park is, but I am pretty sure I have never been to one \& don't want to go to |
| one now. TY |
| I don't know. Maybe if I had a significant other to experience with. Maybe |
| I don't think I need anything else |
| I go a lot |
| I go more often because I love the ocean and just looking at it makes me feel some type of way that I can't really <br> explain but I feel like it makes me the person I am <br> I go very often almost daily <br> I go when I feel like it. This area gene as it is. <br> I guess if I was interested in participating in actions on the water, but I'm not particularly <br> I have a swimming pool at my home. I swim there regularly. If I did not have access to that pool I would spend <br> more time going to public access locations. <br> I haven't been out much lately because of the pandemic. <br> If I had a friend that was going with me. <br> I like areas near water. <br> I like it <br> I like the outdoors <br> I like to go over there <br> I live water front <br> I love swimming <br> I love water and love to spend time with god-given gift <br> I need it more <br> I need to make it a priority <br> I need to make more time . <br> i need transportation <br> I only go in summer <br> i the sun is shining on the west side and <br> I would go if I had more free time <br> I would go more if it was closer. <br> I would go more often if I had more free-time. <br> I would go more often if I had the time. <br> I would go more often if other activities were available. <br> I would go more often if the gas prices came down <br> I would like to have more time to do this. <br> I would like to see more activity <br> i would love to be able to swim <br> I'd go more often if there was a place much closer to where I live. <br> I'd have to feel like traveling there, and there'd have to be something good going on. <br> Idk, it's just me <br> idk more things to do <br> if there were better things |

| Hiking |
| :--- |
| Husband not interested |
| Husband working too much |
| I always go so I don't seem a reason not to go |
| I am handicapped |
| i am scared of bodies of water |
| I am supposed to stay out of the sun because of my medical condition. |
| I am too busy |
| I cannot afford it. |
| I can't drive. |
| I can't see the bottom of the river. |
| I can't swim |
| I can't swim |
| I can't swim and I feel too late to learn. |
| I can't swim in it |
| I can't think of anything |
| I deal with allergies and being near water especially in warm weather, makes them flare up even more. |
| I do music |
| I do not feel comfortable on the water. |
| I don't do waters |
| I don't have a boat anymore |
| I don't have a car |
| I don't have a lot of free time. |
| I don't have any money |
| i don't have anybody to go with me |
| I don't have someone to go with me |
| I don't know what's doing there |
| I don't like being near the water i have a phobia |
| I don't like crowds. |
| i don't like people |
| I don't like pests during the warmer months. |
| I don't like the beach. |
| I don't own a boat |
| I don't own a boat |
| I don't really know whether there is publicly accessible water nearby. |
| I don't swim , so it's only for viewing \& listening to the sound of water |
| I don't want to get used to going because I don't live close enough |
| I don't want to. |
| i enjoy watching the water flow and go to the creek regularly. |
| I find myself inside more in general |
| I get seasick |
| I hate to go alone so this year I will go alone if there is no one to go with me. |
| I hate to see debris or cans, bottles, wrappers. |
| I have a 2 year old who is too curious about the water |
| I have a 2 year old daughter at home now so I haven't used my kayak in at least 3 years |
| I have a fear of swimming in lakes, rivers, etc. Good swimmer, just a strong fear of 'dark water' |
| I have a pool and activities at my home |
| I have an infant so I do not think it is the right place to be with an infant. |
| I have limited leisure time |
| I have no feedback at this time |
| I have other things to do at the house or with the kids. |
| I have to avoid the sun due to my health |
| I have to work and on weekends we plan |
| I have trouble walking |
| I have unreliable transportation |
| I have young children, so it needs to be kid friendly. |
| I just focus my time another way. |
| I like the birds |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| i like the ocean |
| :--- |
| I like the water |
| I like to go when I'm in the mood |
| I live on a canal so I am on water daily |
| I love the air and scenery |
| I LOVE THE WATER |
| I love water |
| i need someone to go with me |
| I need the time I have to work to pay my bills. |
| I prefer creeks |
| I seem to have a lot of chores to do. |
| I want to go alone |
| I want to go there without being noticed. I want to be alone |
| I wish I had a better database online of options |
| I wish I had another kayak |
| I work |
| I work too much |
| I would go more often if I lived closer |
| I would say just money |
| I'd probably go more if I had a powerboat |

| no restrooms |
| No seats. |
| No swimming areas near me |
| No swimming there |
| No, there is not besides not having somebody interested in going with me. |
| No, there is not. |
| No transportation |
| No way to get there on the week days |
| no way to get there, no one to go with me |

N=2,263 adult residents of the Chesapeake Bay Watershed; April-June 2022

| No, it's there when I need it. |
| :--- |
| No, just snakes. |
| No, my new neighbor might take me |
| No. I go to the river or lake here as much as I can |
| No. I'm black. So black people are supposed to be broke... And not welcome around a nice environment. Why? I <br> don't know <br> Nobody to go with me most of the time. <br> No-just access. <br> None close to me <br> None of my family is interested in just walking around, they want to go to 'events' on the water. <br> Not a big fan <br> Not a lot of free time <br> not a water person <br> Not always able to go <br> not being able to get close with a wheelchair/walker with wheels <br> Not clean or safe <br> Not close to me <br> Not convenient around <br> Not convenient to do on a regular basis <br> not enough free time <br> not enough free time <br> Not enough shops, restaurants or activities <br> Not enough time <br> Not enough time <br> Not enough time and weather <br> Not enough time in a day <br> Not enough time or energy <br> not enough time <br> Not interested <br> Not interested <br> Not interested much <br> Not much of an interest in boating or swimming <br> Not near enough <br> Not one near here <br> Not really - wish I had a boat <br> Not really a fan of large bodies of water <br> not really anything for most age groups to do <br> not that i can immediately think of - maybe being somewhat lazy! <br> Not that interested in it to be honest. But again, if I had someone to experience it with them maybe <br> not too much time off <br> Nothing besides the pollution; it's upsetting to see. <br> Nothing going on <br> Older <br> Only more about my emotional health <br> Other hobbies <br> Other more interesting to do <br> Other priorities <br> Other thing. To do <br> Other things to do <br> Parents <br> Parking <br> people <br> People to go with <br> Pets <br> Phobia <br> Physical abilities <br> PLEASE STOP this ridiculous survey <br> Pollution <br> pollution |

Comparison Groups: BC/DEFG/HI/JK/LMNOPQ/RS/TU
aired/overlap T-Test for Means, Paired/overlap Z-Test for percentages
Uppercase letters indicate significance at the $95 \%$ level.
Lowercase letters indicate significance at the $90 \%$

Chesapeake Bay Program Public Access Workgroup - Public Access Research Survey - April-June 2022 - OpinionWorks LLC BANNER 3 (Socio-Economic/Political)
. How would you grade the health of the creeks and rivers near your home on an A to $F$ scale where "A" means extremely clean and healthy, and "F" means extremely polluted and unhealthy?

Comparison Groups: BCDEFG/HI/JKLM/NOPQ/RSTUV
paired/Overlap 1 -Test for Means, Paired/overlap Z-Test for Percentages
Uppercase letters indicate significance at the $95 \%$ level.
Lowercase letters indicate significance at the $90 \%$ level.

9 what grade would you give the health of the Chesapeake Bay as a whole?

## Section 4

## Discussion Guides:

Focus Groups
In-Depth Interviews

## Introduction and Ground Rules (:15)

- Moderator introduces self.
- Early bird!
- We are being recorded and colleagues are observing for note-taking purposes.
- No right or wrong answers. Tell me the good and the bad. Don't say what you think I want to hear.
- Please speak one at a time.
- Tell us a little about yourself: Where do you live? Who do you live with? Then, give me an idea of your typical day. Just walk me through your day, and tell me what you are dealing with. What is on your mind that you are worried about, and what gives you hope and satisfaction?

## A. Being Outdoors and Near the Water (:30)

1. Do you spend time outdoors? What are some of the activities you like to do outdoors? (Unaided)
2. (Then probe): Does anybody spend time on or near the water? I'm not talking about the ocean, but closer to where you live. (Probe to understand what water is near them, what activities they do, where they do them, how often, etc.)
3. (If necessary, probe further with): Does anybody...

- Just walk or sit along the water near where you live?
- Swim? (Not in a pool)
- Fish?
- Paddle, like a canoe or kayak or paddleboard?
- Motorboat?

4. How does it make you feel to be near the water?
5. Where can you access the water near where you live?

- Can you describe that place to me? What is it like? What facilities and amenities are there?
- (Clarify if needed): Is this a public access site, meaning it is open to the general public, or is it privately owned?
- (If necessary): Can you think of any public water access near where you live?

6. (For those with high water affinity): What makes you want to be near the water?
7. (For those with low or no water affinity): What discourages you, or makes you not want to be near the water? (Explore barriers and get a sense of how inflexible those barriers are.)
8. Has any of this changed for anyone? In other words, has there been a time in your life when you became more active outside and near the water than you were before? Think back to when you were a kid, or young adult, or maybe just a few years ago.
(Place less focus on those who are less active because their lives have gotten busier or due to health concerns and other barriers. We are looking for the inflexion points that created more activity.)
What changed?

- Has being outside or near the water more (or less) changed your attitude and outlook in any way?
- Has it changed what you care about?
- Has it changed your other behavior in any ways?

## 45-minute mark

July 2022

## B. Bridge: Key Attitudes (:10)

Lightning Round! For the next few minutes, I want to throw out a few statements and get your reaction to them. For each one, tell me if you agree or disagree, how strongly you feel, and briefly why you feel that way.
(Each statement appears on screen. Discuss each statement briefly to understand factors influencing attitudes.)
A. Being near or on the water makes me feel happier.
B. When I am in the parks or on trails near the water, I see other people like me.
C. There is convenient access to the water for boating, fishing, or swimming near where I live.

## C. Exploring Characteristics of Public Water Access Sites (:30)

(Through this section, we will show images of public access sites to prompt specific discussion.)
Part of what we want to talk about today is making sure that the people who want to access the water are able to do that, and when they get there it is a good experience.

1. What features would most make you want to visit a public water access site? I am talking about physical characteristics like facilities or amenities that are there. Or maybe it is just green and natural. (Unaided)

- (After brainstorming): What is make-or-break?

2. (Cycle through 4 to 6 images, one at a time.) Let's look at some images on the screen. These are actual public access sites. I want you to talk about what you see. What do you like? What could you see yourself doing there? What would make you want to visit? What would keep you from visiting? What would you change?
3. Explore the importance and encouraging or discouraging impact of:
(Discuss each bullet point individually, then ask people which items are make-or-break for them.)

- A site being totally free of people, some people, busy. (What is too crowded? What is too isolated?)
- Presence of parking, access to transit lines or bike paths. (How will you get there, and how far is too far for you?)
- The presence of trash cans and/or recycling bins. (What are the basic amenities you are looking for when you get there?)
- Someone being there to give you help, like a park ranger. (What kind of help or information would you want from them?
- Water safety and comfort, things like availability of life jackets, how-to boat, or boating safety tips.
- Availability of rental or borrowed equipment - things like kayaks or canoes, fishing poles, etc. (Does it need to be free, or just low-cost?)
- Other issues?

## D. Bridge: Key Attitude (:05)

Tell me if you agree or disagree with this statement, how strongly you feel, and a why you feel that way.
D. I want to do more to help make local creeks, rivers, and lakes healthier.
E. My actions contribute to water pollution where I live.
~1 hour, 30-minute mark

## E. Personal Stewardship (:20)

1. What are some things that you can do in your personal life to help make the water and the lands near where you live cleaner and healthier? (Unaided brainstorming)

- (If examples are needed): This might include things like: picking up litter when you see it, stopping using pesticides, using less fertilizer that might wash off into streams, picking up after your dog, getting a rain barrel to collect rainwater rather than letting it wash off carrying all the pollutants.

2. Some of those things seem inconvenient, or a change of your habits or lifestyle. How motivated do you really feel to do those things?

- (Assuming there is motivation): Where does that motivation come from? Can you think back to any turning points in your life, or times when your awareness increased? What caused that?
- (If lack of motivation): What would it take to move protection of the natural environment higher on your personal priority list so you would want to do more things in your daily life to protect it?

3. (AII): Some people think that bringing people in contact with nature and especially the water makes them care about the natural environment and want to do more to protect it. Other people think that just spending more time out there in nature or near the water doesn't translate into caring more.

- What do you think?
- Have you seen any examples of this in your own life or with family or friends that you can talk about?

## F. Wrapping up (remaining time)

We have talked about a lot of things today. I want to go around to everybody, and I want you to paint a picture for us of the ideal public water access site - one that you can imagine, located close enough to you that you would actually go there and interact with the water in some way.

- What does it look like? What features does it have? What is it that makes you want to go there and spend time there?
- You can also say what it should not have, things that would discourage you from spending time there.

That's it! We're done! Give yourselves a round of applause. Your $\$ 100$ gift card will be arriving on your email in the next few hours. Be on the lookout for it, and let us know when it arrives. Thank you!

## October 2022

1. Welcome and very brief ground rules
2. Brief intro by respondent: where they live, who they live with, leisure activities
3. Explain that we are interested in understanding how people's ideas about the outdoors - and the water in particular - might have evolved over the course of their life and what brought about that change.

I'm not talking about the ocean, but rather rivers, streams, lakes, or bays closer to where you live. It doesn't have to be a remote place or a pristine place. It could be a river or stream running right through your town.

The change in your attitudes:

- Might have been gradual over years or sudden - like an epiphany.
- This might go all the way back to your childhood, or maybe your ideas have changed more as an adult.
- Maybe your ideas fluctuate - change back and forth.

Here are some examples of what l'm talking about.

- How much do you care about the condition of the natural environment around you?
- Does concern about the natural environment motivate you very much?
- Do you make different decisions in your personal life because of that?

It's OK if you don't care much about these things. Just tell me where you're at.
So tell me about this. Where are you now, and have your attitudes changed over time?
(Then explore what new behaviors resulted from that.)
4. Let's talk about what has brought about that change.

- Might have been caused by spending time outdoors
- Might have been the influence of a person
- Might be things you have read or seen or heard
- Or something else
(What can we pinpoint? Were there any actual turning points, and can the respondent point to a cause?)

5. Let's focus on the effect on you of spending time near the water.

- What have you seen that has changed how you feel about the natural environment?
- What have you experienced that has changed how you feel?
- What have you started doing differently as a result?

Let's sum up. Our client manages parks and creates access points to the water. They think that giving people access to the water will get them to care more about it. What do you think about that? What would you say to them?

Thank you! A $\$ 75$ gift card will be sent at about 7:00 tonight.

## Section 5

## Transcripts:

Focus Groups
In-Depth Interviews

OPINIONWORKS

Moderator: ... a lot with my hands. Okay, we are recording this. The only reason why we're recording is because we're going to be talking to tons of people. I'm not going to be taking notes. I'm going to be here speaking and talking and listening to you. Steve is going to run the AV stuff, the screen. And we have to put a report together. However, that doesn't mean that we're going to say, "Crystal said..." or "Valentine said..." or "Johnny said..." or Montrell or Quentin said. The way we report our results is, "Respondents in Saturday's group said..." We're not going to reveal your name, your identity and affiliate it to what you say. We guarantee you anonymity and confidentiality throughout this process, so feel free to speak your mind. It helps people to share their opinions openly when they know that they're not going to be outed. I hope that you feel encouraged by speaking out and speaking your mind. You don't have to agree with each other. You don't have to agree with me. Of course, we just have to agree to disagree respectfully and give each other a turn to say why they feel the way they feel.
I'm going to be asking you a list of questions, so if I look this way, it's that I'm looking at my screen on this side with the list of questions that I have to ask you. One of the other things that happens in groups like this is that sometimes, we just stay on a point and don't want to move, and I have to move on. Please don't feel offended if I have to kind of say, "Okay, okay, we heard enough, we got to go keep moving." Or the inverse is if I don't hear enough from someone, I'm going to call you out. And it's not in a way to embarrass you or anything like that, it's just that it's so important to hear from everyone. Your opinion is valuable, that's why we pay you. But also because we want to hear what's happening in wherever you live. Think of yourself like an ambassador to your neighborhood, to your city, and you're speaking out about the things that affect your environment, where you live, et cetera.
There's no right or wrong answers. I want you to be honest. We're going to talk about behavior patterns that may or may not be popular or [inaudible 00:02:43] the norm. So, speak out. Like, "Yeah, I did that" or "I haven't done that." It's okay. This is a no-judgment zone. With that said, does anyone have any questions for me before we begin? (Silence) I'm going to take that as there are no questions.

## Respondent: No.

M: And we can begin. Johnny, can you unmute yourself? Let me know.
R: No questions.
M: Okay. Crystal?
R: No questions.
M: Valentine?
R: $\quad$ No questions.
M: Okay. I heard Montrell.
R: No.
M: Quentin?
R: No questions.
M: Perfect. Okay. All right. This is where we start. A little introduction. I'm going to prompt you through this. Where do you live? And what I mean by that is what a neighborhood, city. If your neighborhood is named a certain part, like an area that has a particular name or what it's known by. Who do you live with? It could be family members, roommates, your pet, children, however you want to call them. And then give me an idea of your typical day. Walk me through your day, tell me what you're dealing with. What are the things that you are worried about? And then the last thing is, what brings you joy and satisfaction? Because everybody has to have a little joy in their life, even if it's tough. Life is tough, but there's little things that make us happy. I'm going to start with our winner, Montrell. And then after I'm done Montrell, you get to choose the next person that goes. Okay?
R: Okay
M: All right, Montrell. Where do you live?
R: I live in Washington DC. I live in Southeast [inaudible 00:04:31].
M: Okay. And who do you live with?
R: I live by myself. I don't have any pets or anything.
M: Okay. So you're solo. And give me an idea of your typical day.
R: I wake up, I take a shower, I eat.
M: I hope you do!
R: Yeah. Good little hygiene thing. And I eat, and then I go to the gym or to the library or something. Then I go to work around four. And from four to 10, I'm at work. And then I come home.

## Segment A: Urban 1; July 9, 2022

M: And then what's on your mind that you're worried about? And then what are things that give you joy and satisfaction?
R: I'm worried about this little COVID thing. Is it ever going lift up? Are we ever going be able to live a normal life again?
M: Yes.
R: And then what gives me satisfaction is that $\$ 150$ I just won.
M: Okay, good. All right. Who goes next, Montrell?
R: Crystal.
M: $\quad \mathrm{Hi}$, Crystal!
R: $\quad \mathrm{Hi}$.
M: Okay, I'm going to go through the same questions. Where do you live?
R: I live in West Baltimore. I live in a neighborhood called Sandtown-Winchester.
M: And who do you live with?
R: I live with my children. I have two sons. They are 24 and 18 , and I have a daughter that's 17.
M: Oh, lovely. And give me an idea of your typical day.
R: Okay. Well, after I get up, take care of the hygiene stuff, right now, a typical day is dropping my daughter off at her summer job, dropping my son off at summer school, and coming back to work. I work from home, I work for FedEx, and that's it. I go to work, I get off, typical... Dinner in the evening.
M: Is it better now that you're working from home?
R: Oh, l've been working from home since 2009.
M: Oh, that's lovely.
R: Yeah, so I was used to it already.
M: So you were used to it already. Okay. Give me something that's worried about, and then joy and satisfaction.
R: Worried about crime. We have the worst crime going on just in the city, period.
R: Yeah, Baltimore kind of rough.
R: Yeah. And my neighborhood is actually one that is notorious for some things. I like it here, but a lot of people don't feel safe.
M: Okay. And joy and satisfaction?
R: I like to go out in the evenings with a lot of my friends and we may go to a bar or a little restaurant or something and have drinks and stuff afterwards.
M: Oh, take me with you. Okay, wonderful. Okay, Crystal, who goes next?
R: Let's go with Quentin.
R: Okay.
M: $\quad \mathrm{Hi}$, Quentin.
R: Hello.
M: Okay, Quentin, where do you live?
R: I live in Washington DC, live in the Fort Lincoln area of Northeast.
M: Okay. Who do you live with?
R: I live with my sister, my brother, and my [inaudible 00:07:44]. Nice, good old generational family here.
M: I love it. I love that. Okay, give me an idea of your typical day.
R: Well, I wake up, take care of hygiene. I usually try to make something to eat. I'm not really a breakfast person that much, unless I'm really, really starving. Recently, it's just been job searching or... Good news on that, I finally landed the position that I wanted, so I'm very, very happy for that.
M: Oh, congratulations.
R: Thank you. Outside of job search, I'm on my phone scrolling social media and seeing what's going on in the world.
$\mathbf{M}$ : Is that the worrying part?
R: Yes, I would say everything that's going on right now. I know Crystal talked about crime spike in Baltimore, we're experiencing a similar spike here in DC. I'm also worried about $\$ 5$ a gallon gas, which is why I don't have a car.
M: I know! Yes. Okay. And give me something that gives you hope, joy, satisfaction.

## Segment A: Urban 1; July 9, 2022

$\mathbf{R}$ : What gives me satisfaction is my children. I have three. I have an 11-year-old daughter and eight-year-old twins. And just seeing them even though they aren't with me, they live with their mother in South Carolina. But just seeing them blossom and grow and do all the things that they want to do and then they're happy makes me happy.
M: Oh, that's beautiful. Thank you, Quentin. Okay, who goes next, Quentin?
R: Let's see.
M: You got between Valentine and Johnny.
R: Johnny, you're up next.
M: All right, Johnny goes next, and then Valentine, you're going to close out this little section. Okay? Okay, Johnny. Hi, Johnny.
R: Hello.
M: How you doing?
R: I'm doing good.
M: Okay, good. Where do you live, Johnny?
R: I live in Virginia. I'm near the Dulles Airport in a town called Herndon.
M: Okay. And who do you live with?
R: I currently live with my girlfriend.
M: $\quad$ Okay. And give me an idea of your typical day.
R: I wake up. Just like everyone else, I do my hygiene routine and then I usually have to drive to Maryland since I work for the government and I work there till about five. Then I hit the gym, and then I usually come back home and have dinner.
M: Oh, that's a drive. That's a big drive.
R: Yeah.
M: Okay. And give me something that you're worried about, and then hope, joy, satisfaction.
R: Yeah. One thing I'm worried about is definitely COVID and definitely the recession we're in with gas prices and food prices climbing at an all-time high, especially rent. And one thing that brings me happiness and joy is definitely achieving a small goal every day. I try to set something small as going for a walk or something to actually feel motivated.
M: Oh, that's wonderful. Thank you so very much, Johnny. And last but not least, Mr. Valentine.
R: How are you doing this afternoon? Everybody can hear me?
M: Yes, sir.
R: All right. I live in Harrisburg, Pennsylvania, which is the capital of Pennsylvania. I live in the midtown section, which would be considered the tony section, kind of posh. Couple blocks away from the actual capital building, the red brick in my living room type thing.
M: Who do you live with?
R: I have a significant other, but it seems like sometimes life makes it seem insignificant. But I do have a significant other. No, you know what I mean? You're worried about your goals or... My priorities sometimes, of course, are different than hers. And you spend a lot of time, you share a community space, but you spend a lot of time doing your own thing. She has a career. I don't have a career. I have a job, but I do aspire to create intellectual properties and do things of that nature. So I do aspire to have a career that-
M: That's part of the worry and the joy and satisfaction, it sounds like. It's like two in one. "Yeah, l've got this situation happening, l've got my goals, she's got hers." But your joy and satisfaction is what you're working on next?
R: Exactly. When you don't see the results that you would like to see... I heard of a proverb saying something like, "When you don't receive what you expect or the end result, you still have acquired something. You still learned something, you acquired experience." So I try to stay focused on that type of thought process because it's easy to get disillusioned or, "Wow, man. I'm not getting where I want to get." And then it really boils down to me at that point, turning those feelings on myself. I'm worried about turning those feelings on myself because then, I don't think properly, I don't act very neighborly, lovingly. You know what I'm saying? I'm like self-centered. I'm like-
M: Yeah, you become Oscar the Grouch.
R: Yeah, exactly.
M: Okay.

## Segment A: Urban 1; July 9, 2022

R: But here's the thing. I might not just go out and display that behavior with other people. What I will do-
M: No, you just kind of internalize it and you have to find a way to...
R: And then I close up to other people. I don't seem like, "Hey!" You know, you give them the high... and all of that and keep it going, so I'm not the best person that I could be in my community or in my family or...
M: Well, that's very honest of you and I appreciate that honesty. We're going to be talking some more about getting outside of yourself kind of thing later on. So we're going to touch on that. And this is how we're going to tie it all together. Everyone gave a little snapshot of your life, which I very much appreciate. Here is where some of that joint satisfaction ties in, especially with recreational activities or just trying-to-blow-stress activities, trying-to-find-a-quiet-place-to-think type of activities like Johnny was talking, trying to set a goal to maybe go for that walk. It all ties into everything that you guys said. Trying to find a place that's safe to go with your children or your family, like Crystal, and I think Quentin was mentioning about crime. Here's the question. How many of you spend time outdoors? And I'm talking about not going to or from work. I'm talking about, "I'm going to take that walk." "I'm going to go down by the water." Or, "I'm going to go to a park." Raise your hands if you do that, and how often? Okay. What about Quentin, Montrell, and... Oh, Johnny raised his hand. Quentin, how often do you go outside to just relax?
R: Oh, often. Often. I'm on my phone, so I couldn't raise my hand.
M: It's okay. So where do you go?
R: I'll take a walk around the neighborhood. My neighborhood is pretty quiet. Where I am is relatively quiet, except recently, because of all the fireworks. So l'll walk around the neighborhood just to clear my thoughts and be with myself for a moment.
M: Is there in park or a body of water around where you live?
R: $\quad$ There is a park near me, and the water is down by the river. And sometimes I make it down to the navy yard or something like that and just [inaudible 00:16:50].
M: Okay. Montrell?
R: Yeah, the same thing. I walk every day.
M: Okay. Where do you go?
R: I go to Wawa. I get a iced coffee. I go to museums by the National Mall and stuff like that, by the monuments and stuff.
M: Any parks or bodies of water that you go to nearby where you live?
R: Yeah, it's a playground right by the library where I used to go to. It's a lot of water and stuff also by the national monument where I walk at.
M: Okay. And I'll go to Johnny, then Valentine and Crystal. I'm going in reverse clockwork order. So Johnny, where do you go? What do you do?
R: I tend to walk around my building complex, listening to sometime a audiobook or I like to sometime walk to... There's a nearby lake called Lake [inaudible 00:17:53]. I like to go there and walk and sit down and stare at the water and clear my thoughts.
M: Okay. Valentine?
R: Yeah, the little area that I live in, because it's by the riverfront, I created-
$\mathbf{M}$ : What's the name of the river?
R: $\quad$ The Susquehanna River.
M: Okay.
R: So right here in Harrisburg, right here in the capital, we have a riverfront. And they host events there, do a few things. And they have a paddle boat, Pride of the Susquehanna, like a old-looking... That is specifically why I got the spot that I got down here, is because it was the first area that attracted me when I moved to Harrisburg over 10 years ago, it was where I used to like to take my journal and go journal. Just like I think Quentin just said, or not Quentin, I listen to [inaudible 00:18:52]-
M: Audiobooks? It was Johnny. Johnny said that.
R: Johnny, yeah. I listen to different podcasts and things of that nature while I'm down there.
M: Okay. And Crystal-
R: And Montrell... I need Montrell to know, Sheetz is better than Wawa, Montrell.
R: $\quad$ Nah! Yeah, you might be right about that. You might be right.
$R$ : All right.
R: Wawa's cold food is better than Sheetz, but Sheetz got better hot food.

## Segment A: Urban 1; July 9, 2022

R: Okay, okay. We'll compromise. I'll accept that.
R: Yeah.
M: Okay. And-
R: But iced coffee at Wawa is better. I can't let you get that one.
$\mathbf{R}$ : Okay, okay. I'm going to let you win. You got that one.
M: Okay. Crystal?
R: Okay. Well, a lot of times, I attend this fitness class. It's on the indoors. But when we're not there, it's a group of us, we get together at this Lake, Lake Montebello, and we usually walk around there and conversate and let off some steam and things like that.
M: And socialize too, because it's good to also do that while you're walking around in nature and doing all that stuff. That's fantastic. Okay. Does anyone, and not in a pool though, does anyone do any swimming?
R: No.
M: Or just maybe go to a body of water to picnic or to swim or to do kayaking sometimes? Anybody do that?
R: I know how to swim. I just haven't been swimming in a while, since like last summer.
M: Okay. Johnny, your hand is up?
R: Yeah. Same as Montrell. There's a pool where I live, but I haven't gone in a while.
M: But not a pool. I'm about a natural body of water like the ocean or the rivers or a lake.
R: Yeah. I go to Ocean City, Maryland. I go there every summer, but I haven't been this summer yet.
M: Okay. And Crystal says she goes to Lake Montebello, right? Is that what it's called?
R: Yes.
M: Montebello. And Quentin, is that where you go? Where you live, is that the Anacostia, I'm assuming?
R: Yes.
M: Because the Southeast-
R: That's the Anacostia, but I'm not stepping a foot in the Anacostia. [inaudible 00:21:14] the Potomac, that's something that's [inaudible 00:21:16].
M: $\quad$ The Potomac is-
R: [inaudible 00:21:17] different.
M: Going by the Potomac is a lot... What? Better than going to the-
$\mathbf{R}$ : The Anacostia is dirty. I'm not getting in the Anacostia right now.
$\mathbf{M}$ : Did you say that it's what?
R: The Anacostia is pretty polluted. It's getting better, but for me, it's not where I want to get in and swim. Now, there's times I do go down to the tidal basin and just sit. And especially when it's cherry blossoms time, it's a very beautiful site to see. But like I said, I do go down where the navy yard is, that is the Anacostia. I mean, it's nice to look at but I'm not stepping foot in it.
M: So you're not jumping in at the navy yard area, but it's nice to just look at. Okay. Valentine, up in... What is it? Harrisburg?
R: Harrisburg, yeah.
M: At the Susquehanna, and you said you live by the riverfront, you said that there's activities and things. Do they have anything where you can swim or boat or kayak or paddle boat? What's happening over there? Can you rent any of these?
R: Yeah, they have boats. It's the East Shore and the West Shore. The East Shore is the city part, the capital side/ The West Shore is the suburban side. It's a different tax bracket, but I'm saying it's across a bridge. You can walk across. Now, on their side, they have a baseball field. A semi-pro baseball team, the Senators, you go to the Phillies or Pittsburgh Pirates from there, they have that stadium, but they have the little boats. You can get the type of boats... I guess they're little like paddle-
M: Are they the paddle boats that you just... Like a bicycle?
R: Yeah, they have that, and they have some other things. And they have some motor boats and some other things over there that you can rent.
M: Have you tried any of them?
R: Honestly, I haven't. It's so crazy. They have areas of this where you can see somebody standing out... It seems like they're in the middle. They're standing there and then they got-
M: In the water?

## Segment A: Urban 1; July 9, 2022

R: $\quad$ Yes. And it's only up to their knees or their shins, but then they got places it's over your head. It's very dangerous. Kids swim in there a lot of times, especially when you go from the... Like I said, I'm on the East Shore side. From the West Shore side is where all the boats and things are, right down at the embankment, right down at the water edge.
M: $\quad$ They don't have any lifeguards or anything like that?
R: $\quad$ o, it's a river. And I'm just saying they got all these events and all these things that attract children, walking paths, bike paths and everything. And a lot of kids go swimming in there and I'm telling you, somebody ends up missing. Somebody end up missing just last week, the last three weeks somebody done died in there. I'm saying it's sad though, because usually, it's a kid who gets in there. And I'm telling you, it's so shallow in certain areas, you can walk and be 50 yards out into the water. And then you're somewhere and it's-
M: Then there's another part where you're just-
R: Oh, you're done. And that's so deceiving. And the undercurrent. It's a river.
M: Yeah.
R: You know what I mean?
M: Okay.
R: Yeah.
M: Okay. Hey, Johnny, did you want to say something? Or was that your hand up for something that we already talked about?
R: $\quad$, $\quad$, it was for something we already talk about. I'm sorry.
M: Yeah. Okay. Because every time I see that little hand, I thought it was you wanted to say. Okay, so here's a question that I want Crystal to answer first. She could get us started on this round. How does it make you feel to be near the water? Think about the feelings, like you close your eyes and think about the... You're at that place, that lake that you go to. How does it make you feel?
R: It makes me feel serene and give me a feeling of peace. I like to look at it. I can't picture getting in, but I really love to sit and look at water.
M: Serene, peaceful. What else?
R: Just a sense of calm. It just takes away a lot of stress and things like that. Anything that's in the back of your mind. It actually helps you to think and have more of a clear mind when you're thinking about different stuff. Just feel at one with it.
M: I have a question from the beyond. Sometimes Steve will send me some little notes, so when I say question from the beyond, it's really Steve. Don't mind me. Steve is asking, why can't you picture yourself getting in?
R: Well, unfortunately, just growing up, my mom didn't let us... We've been in pools and stuff. We've never really learned how to swim, basically. And it's always been a fear.
M: Okay. So the fear of, kind of Valentine was talking about, "Hey, you're three steps in and you're done."
R: That's it. Yeah, that's it.
M: Okay. So it's more fear of what is beyond in that water.
R: Right.
M: Okay, good. Thank you so much. Who wants go next? How does the water make you feel?
R: It makes me feel good. I'll go.
M: Okay, Montrell.
R: It's therapeutic.
M: Therapeutic. Okay. Any other feelings?
R: No.
M: Quentin?
R: I'm going to basically second what everyone else was saying. For me, it gives a sense of calm and it helps refocus myself.
M: Kind of like what Crystal was saying, that it gets you to a mind space where you can do some thinking.
R: Yes.
M: Okay. And Johnny?
R: I would say sometime, it makes you feel like a child again, since you kind of feel free. You could do anything as long as you know how to swim and take care of yourself. You get a sense enjoyment when you're at the beach or the lake or a pool.
M: Okay. And Valentine?

## Segment A: Urban 1; July 9, 2022

R: I see we can't share anything on the screen. This picture, it's from the riverfront a week ago. This just sums it all up. I like the way that the sun... It's showing the sun setting. And I know you can't see it-
M: You could drop it in the chat. Can you drop it in the chat?
R: Can I drop it in there? Okay.
M: Yeah.
R: It just shows you the way that the sun is setting off the water, the glare, the little... It does do something. It makes you feel a certain way. It makes you-
M: Oh, wait. Steve says that you can share now. He gave you control so that you could share your screen.
R: Okay.
M: But the thing is, Steve, he has it on his phone.
R: Yeah, well I could probably get it out of my Google photos in here. The point is, I'm just saying, just like everybody else, it brings a calming effect to you. I just love everything about it. It just takes my mind in a spiritual place that gives me a piece of serenity.
R: Likewise.
M: Everybody agree with Valentine?
R: Yes.
R: Yes.
M: You know what? Just email it to us. Email it to Steve. Where you received the confirmation, just email it there.
R: Okay.
M: Okay? All right, let's go to the next part. Valentine talked about amenities that they have, like with the boats, paddle boats. Have you seen any of those kind of amenities near where you live? Are there amenities available for people to either swim or to kayak or to paddle boat or to picnic or enjoy the water that way? Do they exist close to you? Anybody can go.
R: I know that you can paddle boat in Downtown Baltimore at the Inner Harbor. I know they have that. I don't think they have kayaking and I know that you can't swim down there. But Inner Harbor basically for paddle boating.
M: Okay. Have you done that?
R: No.
M: Okay. And why not?
R: $\quad$ No, those boats are too small and that's too much water.
M: Okay.
R: Yeah. No, thank you.
M: Do people have life jackets when they're on?
R: Yes.
M: But even with a life jacket, you wouldn't do it?
R: $\quad$ No. No, thank you.
M: Okay.
R: $\quad$ Not for me.
M: Couldn't do it?
R: No, no thank you.
M: Okay.
R: $\quad$ Not for me.
M: It's just... You're just afraid to... But you said the boat are too little and there's too much water. So the...
R: Right.
M: We need a bigger boat. Like the movie Jaws.
R: Yeah. On the bigger boat.
M: Yeah. We need a bigger boat for Crystal. Okay. Okay. Okay. Anyone else? Johnny, by where you live, that lake that you like to go to. Do they have any amenities there or is it just park and like a walkway or something? What's around there? Do they have anything?

## Segment A: Urban 1; July 9, 2022

R: It's mostly, like you said, like a park and then it has some storefronts where you could grab some ice cream and walk around the lake. But, I haven't seen no paddle boats or kayaking near the lake.
M: Okay. Quentin, anywhere in the area where you live in DC do they have any of those facilities?
R: Yes. As I mentioned before, down the Tidal Basin has paddle boats. I believe at the wharf... By the... Yeah, at the wharf there is...
M: So the wharf, the Tidal Basin...
R: It's the Tidal Basin. Yes.
M: How far is it from your house?
R: Well, for me it's about 10 minutes. Because I live on the eastern side of the city. So, that is... I live right on the border of... Into Bladensburg, Maryland. So, that area... All those things are downtown.
M: Okay. Montrell, I know you said you lived in Southeast... You go to the Navy Yard.
R: I don't go to the Navy Yard, I go to the Wawa.
$\mathbf{M}: \quad H e ' s$ on this Wawa thing. I mean, yeah...
R: He wants to start a fight. He wants to start a fight over Sheets and Wawa.
M: Yeah. But sad sadly this is not a Wawa focus group.
R: Look, tell Miss Crystal we ain't talk about Royal Farms neither. We sticking this to Sheets and Wawa.
R: Oh Yeah. I like Sheets. So, I don't like Royal Farms.
R: You know, because everybody in Baltimore, they like Royal Farms.
R: Yeah I don't. I don't.
M: Okay. So let's stick to the bodies of water, not the kind of water that you put in your body. So Montrell, anything around there that in... I know that you said the Anacostia was polluted, but it's a little cleaner now. Is there anything that where... At least close by?
R: A lot of places like he said the wharf... I have a... It's... Like by the Tidal Basin, it's like boats, paddle boats. It's a lot of things you can do around the city with water in it.
M: Okay, All right.
R: Don't pay for it though. So.
M: Are there... Let's say bathrooms, functioning bathrooms?
R: Yeah.
M: I heard Johnny said that there's like little storefronts where people can get ice cream.
R: Yeah, we have a national harbor that's close to us as well.
M: Oh right, right. That's right. Yeah. Okay. Okay. So you could picture it. So how far is that body of water where you live? Quentin said it's about 10 minutes from where he lived. Valentine said he just lives down the block from the river. Not too far from it. Crystal, how far are you to Lake Montebello?
R: Oh, I live on, in West Baltimore. It's actually in East Baltimore. Maybe a 10 drive.
M: A 10 drive. Johnny, how far is this lake from you?
R: It's like a 15 minute walk.
M: Okay. So not too bad. Montrell, how far do you live from the river where you like to kind of walk or go around?
R: About 30 minutes.
$\mathbf{M}$ : $\quad 30$ minutes?
R: Yeah.
M: Okay. Quentin, you said about 10 minutes?
R: Yeah, if you're driving it's about 10 minutes.
M: Okay. So Crystal talked about her fear about being in the water because she's been honest with us and saying that "I don't know how to swim and I'm fearful of that." That's a reason for not wanting to be near or in a natural body of water. What are other reasons that you can think of that makes you... What discourages you not to be near or in water?
R: The cleanliness of it.
M: Describe it. Describe
R: I remember there used to be a beach, I don't know if it's still here or not, but it was called Gunpowder State Park. It had the dirtiest brown water. It was a beach I guess. It had the dirtiest brown water ever and at one

## Segment A: Urban 1; July 9, 2022

time it was on the news for the contamination and all of the dead fish and stuff in it. So, I really don't even know if it's still in existence. But, you say Gunpowder to somebody around here and they're like, "Oh no." Nobody would go.
M: $\quad$ Not going to swim there. So pollution, the pollution... The cleanliness or lack of cleanliness of the water. Any other reasons you could think of?
R: I would say, agreeing with Valentine, not knowing the depth of the lake or the beach sometimes... Because even the best swimmer, if it's very deep and anything can happen even if you know how to swim.
M: So, the lack of signs like "Okay, this is three feet deep, don't go here, go there. Stay three feet from the shore." So you want more guidance as to how deep is the water where you're at. So that you know, "Okay, this is safe for swimming or this is not safe for swimming?"
R: Correct.
M: Okay. Okay. Any other thoughts? Okay, so we have cleanliness. We discussed of course the dangerousness of not knowing how deep water is. Are there any other inhibitions or some things that discourage you from not wanting to be in or near water? Natural water. Not a pool. Anyone else? How about fishing? Does anybody fish? Anybody like to go fishing once in a while or often?
R: Yeah, but I just haven't been since I was young.
$\mathbf{M}$ : Okay, so it was more when you were young?
R: Yeah.
M: Who did you go with when you were young?
R: Like my friends parents and stuff.
M: Okay. What makes you not want to do that anymore?
R: I don't know. I forgot how to.
M: Oh, you forgot how to. Okay.
R: Yeah, but I wouldn't mind going out there still.
M: Okay. Okay. Hey Valentine...
R: Can't be that hard.
R: Yes, Ma'am.
M: So... So...Mr. Valentine, you know how to fish?
R: Yes, and it's wild... I didn't have a father figure in my life or anything. My grandmother took me fishing. You know what I mean? My grandma fished and my aunt, her youngest daughter who lived with us, they would take me fishing. So, I've been fishing there... I see there's a lot of things that go down at this riverfront when I'm telling you I can walk two blocks down the street and I'm right there. Three minutes and you can walk down. It has the whole bicycle route, everything. It has the fitness thing on the top where you're driving down the main waterfront street. So they have everything, every amenity for everybody that could... Want to do a workout, you just stay on the top part and it has workout stations and it has exercise things. Then it has natural physical art. Art and display for different types of things. They have these things where you go up and you read what's going on. It's telling you something historic about the water or Harrisburg. It's like that for miles. For several miles along the water.
M: Oh wow.
R: So, now here's the thing... We go down the little ramp and it's like... When I say a ramp, it's like a little utility road that is built right there for that. A truck might go down and clean up shrubs or something. But they're the pathways, they're also for the bike...
M: $\quad$ Trails. Like the trails.
R: Yeah. So you go right down. Now we're right on a concrete embankment. The water's 10 feet from you and the water is... There's stairs. So you could, like what I'm saying, these kids literally go get in the water and then get messed up sometimes is... On my side, you can just walk down 10 or 12 steps depending on the height of the river. It might be 15 steps that are visible. Sometimes it only might be eight. But you're right, you walk right in the water. Then its...
M: So, do you go fishing or do... I mean, do you fish now?
R: I see people fish. You see people fishing down there and I haven't done it. I'm saying to myself, well I haven't been fishing in years. Maybe I would like to do that too. But like I said, there's so many things going on down there. Like I said, the boats, the fish, the fishing.
M: So there's a lot... There's a lot you could do. So you haven't really... It wasn't really... Hasn't really been on your mind?

## Segment A: Urban 1; July 9, 2022

R: I haven't explored it, but here's the thing... Besides the calm serenity that I get from being there, but when you do think, when I do every once in a while have that weird thought. Cause you see the guy fishing like, "Damn, I'd like to go do that!" You hear about somebody getting injured because it's a river. I think the undercurrent is so strong. People take it for granted.
M: So, its like you want to go fishing, but then you hear it on the news and now, "You know what?"
R: Oh yeah, somebody... Something happened to someone.
M: What if you're on a boat? What if you have a row boat or a little motor boat?
R: I don't know. You know why? Because wasn't my fishing experience. My fishing experience was off the shore off. So, I don't know. I do have friends who they go out on... They all get together and rent boats and go deep sea fishing and stuff like that. That sounds exciting. But that's where I kind of get scared. Like, "Wow. So you're how far out and you can't see land and you're fishing?" You know what I mean? I'm kind of scared if something happens out there, it's like, what do you do?
M: So you want... Safety is going to be a number one issue for you.
R: Yeah. Yeah. I'd rather fish off a shore than reach out of the boat.
M: Okay. Johnny, any boating or fishing even just any of those activities in your group?
R: $\quad$ No, I have Never done it.
M: Okay. Never. You just go to the supermarket and get that fish?
R: Yeah.
M: Yeah. Okay. Okay. Okay. All right. Okay, let's go to the next section then. Steve. Let's see... Okay, so we're going to show you some statements on the screen and for the next few minutes we're going to throw out a few statements and get your reaction to each of them. For each one, tell me if you agree or disagree. But disagree from... So you can do agree strongly or strongly agree, agree somewhat, disagree somewhat, or disagree strongly.
So, the statement is up here it says, "Being near or on the water makes me feel happier." So, strongly agree? Who says strongly agree on this one? Raise your hand or say yes. So I have two strongly agrees. Montrell, strongly agree. Johnny as well and Quentin as... So, all of you said strongly agree that it makes you feel happier. Okay. We talked about that serenity and that peace is what you feel. Are there any other feelings? I mean peaceful, serene, it helps you clear your mind. You think clearer. But we didn't talk about that. It doesn't sound happy to me. What makes that happy for you Crystal?
R: Because you thinking... Oh sorry.
M: No, go ahead Montrell. Go ahead. Then we'll go to Crystal.
R: Because you're thinking clear, you don't have no negative thoughts. Or you're releasing your negative energies come out. It's like being by the water, you're releasing negative energy from out your body. You can stretch... You can... It just make you happy, make you feel better. It's like...
M: Okay, so happiness is the result of being near the water.
R: Yeah.
M: You feel peaceful. You feel serene. You clear your thoughts. Then after your mind goes through all that, that's when the happiness kicks in?
R: Yeah.
M: Okay.
R: $\quad$ Sometimes it kicks in while your body and your mind is doing that. If you walking around by water and stuff as well.
M: Okay. Crystal?
R: Actually it makes me happy because it's the total opposite of doing the day with all of the stress from work and stress from everything going on. You get around the water, it's nice and calm and you feel free. You can relax. I'm just the total opposite of what I've been through. I'm like, "This is life for me. This is excellent."
M: So, like a release? So that release from everything that you've had during the day or during the week... Induces or invokes happiness when you're near the water. Valentine?
R: $\quad$ All I can say is this, that the water has the ability to change my frequency.
M: Explain.
R: Okay. Well, they say that we all live on by vibrations. We vibrate... We're energy masses in a constant form of vibration. So I'm just saying when I get around it doesn't matter... I could have went there with an attitude. I don't even know when my attitude left me. All I know is it's gone. Once I got around the water, I can't even

## Segment A: Urban 1; July 9, 2022

pinpoint... It does something to me. It just brings on a... Like I said, a serenity, a peaceful quality overcomes me just by being around the water. I don't know if it has to do with the visual, the audio. It's possibly...
M: $\quad$ The audio being the what? The waves or what?
$\mathbf{R}$ : The sound. The sound that you hear. The water... The way that it washes against the bank.
$\mathbf{M}$ : Describe. The washing of the waves?
R: I just can't say, but... I can't pinpoint it because now that you're asking me to think about it, I can't say what exact moment that it happens. I'm just saying once I'm in that environment...
M: It's like a zone.
R: Yeah, yeah. I zone out and I'm saying I'm lifted to another frequency. The frequency that I'm on, is no longer the frequency of anger...
M: $\quad$ There's no more static. No more static on your frequency.
R: $\quad$. Yes. I'm real cool and collected and I like that.
M: Quentin. Oh sorry.
R: No, you're good.
M: Thank you Valentine. Quentin. What's the happiness? Cause nobody mentioned the word happy to me before. So I'm curious.
R: I would say, agreeing with what has been said before. There's times that depending on what's going on, if I a stressful day or anything like that, just going by the water, hearing the... Seeing the calmness. If I'm where my kids live, they have a manmade lake. There's a manmade lake there in the neighborhood and just going in and just seeing...
M: $\quad$ Even a man made makes you feel peaceful and happy?
R: Yeah, because it's something... [inaudible 00:48:00] That quality... Just that thing about being near... Being near the water. Being in nature.
M: Okay. All right.
R: So... That I would say that's really relaxing. You know...
M: Okay. Thank you. Johnny?
R: I feel it makes you feel happy. Cause it's some sort of meditation. I have yet to hear somebody that hates going to the beach or the lake. Just like everyone agreed on this...
M: Even if you don't know how to swim?
R: Yeah. Just because you could sit there and read a book. As long as you're near the water, you're getting the benefits of being around the water, seeing people happy, swimming, kids running around. So, it's like a place you want to be to kind of get some enjoyment in your life.
M: Okay. Okay. All right. Let's go to the next statement. When I am in the parks or on trails near the water, I see other people like me. Meaning demographic or members in your family. How much do we agree or disagree? You could put it in the chat and then we can discuss it.
R: I disagree.
M: Okay. How many... What do you see? What kind of people you see out there?
R: I see every demographic. Majority Caucasian.
M: The majority of them are Caucasian people in the water? You don't see a lot of black and brown people there?
R: No.
$\mathbf{M}$ : Why do you think that is?
R: Because like Miss Crystal, a lot black people don't know how to swim.
M: Okay. Well that may or may not be true though.
R: I don't know if that's a stereotype or not, but... I don't think a lot of people are interested in that type of stuff. But at the same time I do see a lot of mixed races, but it just be majority white people inside of the water.
M: Why do you think that is though?
R: I don't know. I'm not for sure.
M: Okay. Okay. Anyone else?
R: Affordability. Probably.
M: What?
R: Affordability.

## Segment A: Urban 1; July 9, 2022

M: Affordability? So going to the water is expensive?
R: Nowadays. Yeah.
M: Okay. Johnny disagrees also. Johnny, talk to me about why you disagree.
R: Well, being that I live in more of like a suburban...
M: I'm assuming you're Latino Johnny by your last name.
R: Yep. So, being that I live in a suburban, you kind of don't see a lot of Latinos near the lake. Or sometime... I've been to Ocean City, it's barely that you see some Latinos out there. So, I feel it's because, just agreeing with Montrell...
M: So, who do you see? Who do you see out there?
R: White or black people.
R: Most of the time it's either Asians or multiracial couples or Caucasians.
M: Okay, okay. Why is that?
R: I wouldn't know exactly. I just feel... I don't know.
M: You don't know? It's boggling, isn't it? Okay. Valentine, what do you see when you're out there? Do you see people like yourself?
R: I see, as everyone else said, the racial composite is more Caucasian than anything.
$\mathbf{M}$ : Why is that do you think?
R: I don't think... Like I said, I can walk to mine, so I can't say it's affordability, you know what I mean? I can't say it's...
M: What about accessibility? What about Accessibility?
R: That may have a big thing to do with it. I'm, no matter what, I live in an area that's more Caucasian or multiracial than black. So, maybe that's why most of them live further in the inner city. I'm not saying that... The inner city's probably only 10 minutes further, but I'm just saying... Coming down to the river that might not be there or they might feel as though that's right by the capitol. Now you go down there and that's where you get jammed up. That's where people mess with you more. They may have a feeling of that nature. What I do see is people that are creative.
M: So, hold on. Time out. Time out. You said that some people like us black and brown people might not want to go to the water by the capitol or by these official buildings because that's where you get jammed up. Meaning, and I'm interpreting, tell me if I'm wrong... Hold on, tell me if I'm wrong... That that's where white people could be racist towards them or the police could start some mess with them. Is that what you mean?
R: Yeah.
M: Instigating some... They confront instigation by white people. Like, "What are you doing here? We don't want..."

R: It's not even that it has to be something as blatant as that. When you come outside of your element, sometimes people are... The look that I get makes me feel uncomfortable to the point it starts to become a confrontation...
M: Have you confronted... Have you had any situations when you're taking the walk down by the Susquehanna? I'm assuming those are dreads underneath that cap. Are you... Have dreads? No? Yes? Maybe?
R: $\quad$ Got something natural going on under there.
M: Okay. You got some natural I. Okay, there you go. There you go. Okay, good. So, what I was asking is when you do take your walks, what are the looks that you get from... Is it from white people? Is it from other people? Other like nonwhite but not black people? Who are you getting... Where are you getting the instigation from?
R: $\quad$ The white people.
M: $\quad$ The white people?
R: Yeah.
M: Let's talk about it. Let's talk about it because this is what we're here to do. I want to learn.
R: All right.
M: $\quad$ The white people give you strange looks when you go take your walk?
R: Yeah. I'm just saying... I'm not a kid, I'm 53. So, I'm be like, I can look past it but I can really identify with someone that's my grandson's age who's 16 or 17 and they're going down there... Just say a bunch of kids and hey, they're going, they're having fun. But the looks you'll get or the... What comes next at 16 or 17 , I

## Segment A: Urban 1; July 9, 2022

was confrontational. Someone looked at me wrong, they're white... They're doing this or they're making a statement pointing at me and automatically...
M: It's on. It's on. It's going to be on.
R: Yeah. So, I could see that. I'm saying I'm just beyond that age. So, when I get the funny look or whatever, I'm beyond that age.
M: You're past them, you're past them, right?
R: Yeah.
M: Okay, Crystal. Let's go to Crystal. Thank you Valentine. Crystal.
R: You're welcome.
M: I know we talked about happiness now... How much do you agree or disagree with this statement?
R: I agree. Most of the people at that particular lake, they're just like me and I think it's because of the neighborhood that it's in. I would say it's usually about 70\% black, maybe $30 \%$ white.
M: Okay.
R: Yeah.
M: So, not too bad in your... You don't get those kind of things in your neighborhood?
R: No, no. It's a very friendly place to go. It's one of the more quieter places where you can go and not really worry about too much trouble.
M: What do you mean by trouble?
R: Oh, well here it's just a lot of shooting. You're just walking around minding your business and there's gunfire everywhere.
M: Okay.
R: $\quad$ So, it's fairly peaceful there.
M: Okay. Anyone else want to comment on this statement before we move on? All right. Okay, Steve, take us to the next one. Okay, so we're going to talk now about features of a public water access site. What this is... I'm going to read this so I'm going to go over here. Part of what we want to talk today is about making sure that the people who want access to the water are able to do that and what they get from it is a good experience. Not the... To create kind of a place where we... That everybody feels welcome and there's no craziness mess like racism number one. I mean, I know we can't escape all that, but to have more black and brown people have access to amenities and natural bodies of water in particular.
So, first question. What features would you make you most want to visit a public water access site? These are the physical characteristics like amenities, facilities... Things that they have available, the offerings. It's not just the body of water and that's it. Like, what are the things... Imagine... Close your eyes and imagine all the things that you would like to have that would make you want to go there every day, once a week, twice a week, a month... To make it something worthwhile for you. Where you can find that happiness and peace and make it even more happy and more peaceful for you?
R: A bike riding trail.
M: I'm going to start with you since you have children. What are the things that you want to see at a public water access site?
R: A bike riding trail would be nice.
$\mathbf{M}$ : Okay, so just something specific for bike riders?
R: Right.
M: So what would it have? Explain it to me. How should it be?
R: $\quad$ Somewhere where it's just lane. A lane or two for bike riders only where there's no walkers that are in the way. Even places where I go normally, most people have their own bikes. But then they have places where you can rent a bike and bring it back when you're done. That's nice. Places to skate. We have people that like to skate.
M: So, like roller skates or skateboards or both?
R: Both.
M: Okay. So we have walkers, definitely bikers, and then just also little skating area. A skate park with like... What do you mean... Like where the kids like to go skateboarding or what do you mean by that? Or a roller rink? What are you talking about?
R: $\quad$ Right. Well, more like roller skating, not the ramps and the... Not that, but just roller skating basically. You do see some people that'll get on the skateboard and they go around the walking trail. It's kind of like when you are walking and things like that, you got to watch out for the bike riders and stuff and that makes it a little...

## Segment A: Urban 1; July 9, 2022

M: $\quad$ So it makes unpleasant to have to weave and bob every time.
R: Yeah.
M: Okay. Okay. Montrell?
R: Yeah, the same thing as everybody else.
M: Okay. No, but what features would you like to the public water access site? What features?
R: The walking trails. That's it.
M: Okay. Anything to access the water itself?
R: No.
M: No? Okay.
R: Oh, it's like a pier and stuff like that standing by the water and stuff. Yeah.
M: Okay. So have a pier to kind of walk out on?
R: Yeah.
M: Okay. Okay. Johnny?
R: I would say... Well in my case, more like paddle boats and stuff like that so that people can access those type of stuff.
M: Like a little paddle boats that you can use and rent?
R: Rent. Yep.
M: Okay. Okay. All right. Valentine?
R: I think it's not as much as want something physical as far as that makes accessibility. Something that you said earlier kind of stuck with me. Maybe some more people that gave information about... Like I'm saying, kids are going out here and getting hurt. Some adults are going out there and enjoying themself and other that, but young kids are going out here...
M: So, an educational component?
R: Yeah, something... But not something like this. You got to read because I mean, I might be at the stage where I'm going to stop and read it, but someone who can interact with these...
M: So, like park ranger?
R: Yeah. More or less. But some... Like a couple and not just one because this is a several miles of water. Someone that's there that this younger generation. Well, they can... Either group. Either older or young, could identify with and would like to get more, in case they do want to play around. Because kids are taking real big chances. I'm not lying to you. If I did the statistics, I know at least 15 kids died in the last two years messing around in that water. And I think that's a pretty significant amount to keep having the same thing happen. And no changes have been made that they have these accessibility points that are so...There's nothing, there's no fencing, nothing. They can get in there. And I'm 14, I'm 15. I can swim already, I think. Or I believe. You go down here and you get sucked under the undercurrent. Six of y'all make it out and one of y'all don't. It's like that every time. So I'm just saying, wow. Maybe if they had someone there that they could really talk to. If you're at the beach, it's a lifeguard. If it's swimming pool, it's a lifeguard. Somebody like that, that could make it...
M: Safer.
R: Yeah. Yeah. Yeah. You know what I mean?
M: More safety.
R: And give understanding what they're messing with. Because it ain't a manmade lake. It ain't a pond. They're messing around in a river.
M: Yeah.
R: You know what I mean? It's different. Even though they got it... And they made it appealing. I want to go down there. I'm attracted to it. Yeah. It makes me want to put my foot off the step into the water sometimes. So I know what it's going to do to a kid. You know what I mean? Yeah.
M: Okay. Quentin? Any other features that you want to see?
R: I agree with what everyone is saying. For me, I know when I go down to the Navy Yard, I like to go down there and ride a scooter.
M: Those little electric scooters. Right. Okay.
$\mathbf{R}$ : $\quad$ Yes. I would like to see those.
M: What about accessing the water itself?

## Segment A: Urban 1; July 9, 2022

R: I think there should be a pier available. Somewhere that if someone wants to go out and get on a boat and enjoy the...
M: Would you?
R: $\quad .$. whatever. Ask me that in a couple years.
M: In a couple of years. Okay. So you don't want to go on a boat in the river?
R: I do. I actually do want to get on a boat. It's not going to be a kayak or...
M: No. So you are in Crystal's camp. You need a big boat. You need a big boat.
R: I need a bigger size boat now. I do know how to swim. I do know how to swim. So l'm not afraid of getting in. I'm not afraid of getting in. But just like I don't do miniature planes, so the little...
$\mathbf{M}$ : You want a big plane, not a little plane. Right. You want a big boat?
R: I don't want to be on a... Right. I don't want to be on an infant boat. I want to be on something that has some space.
M: Right. Right. Right. Okay, good. All right. So then we're cycle through some images, then, that show some of the amenities that are available. And amenities are features that can be added to a location. It could be if you have a small area that's available, a little bit of an embankment? You could have a bench. Or if it's a larger area, you could have piers or a sitting area or kayak available. I know some of you ain't down. You're not getting on a kayak. You're not going to get on no kayak. But that it's available. Out of all of these here, which appeals to you the most?
R: B.
M: You. Who said B? Who said B?
R: Montrell.
M: Oh, Montrell. You were the one that said a pier.
R: Yeah.
M: Yeah. What do you like about this?
R: Well, it's pier, so you can actually put boats and stuff on there too at the end of it. You can go swimming. You can go fishing. It look like they got some bathrooms over there. Or maybe a snack or a restaurant or something in the back as well. But everything in B basically screams something nice.
M: Okay. Johnny, what do you think? Which one appeals to you the most out of these?
R: I'll also choose B because it's a way of accessing the water without being in the water. If somebody doesn't know how to swim, they could still walk in and get a nice view and get the feeling of being surrounded by water.
M: Okay. Okay. Crystal?
R: I like A.
M: $\quad$ Tell me about A. What appeals to you about A?
R: I could sit there. I could bring lunch. I can watch. I could have my phone take photographs of the water. And I don't have to be so close to it.
M: Right. Okay. So you have access to it, but you're not in it.
R: Right. Because as good as B looks, B actually makes me feel dizzy. I don't want to go out there. I don't want to be there. It looks nice, but I don't want to be there.
M: So you're going to be on the grassy area, right there. Right by the blue building? Or what is it? I don't know what color. The building with the stripes.
R: Right. Yeah. I'll be where there's land. I'm not stepping over the part where it's water.
M: Okay.
R: Little boards break or something like that? No.
M: Okay. And what about that little boat there that's there? Is that too little for you?
R: Definitely.
M: To hold people, C. Okay. Okay. Valentine, which appeals to you the most?
R: I agree. I think B looks the nicest. And B has a lot of qualities, but I'm somewhat more like Crystal. I would like to be around $A$ or $C$.
M: Okay. Explain.
R: First of all, I like my... Okay. I don't want to be down in D with the whole group of people. Maybe at an event or something. But on my normal...

## Segment A: Urban 1; July 9, 2022

M: Every day?
R: Yeah. Walk to the water, I want to be somewhere where I can see it, have all the peaceful bliss, and soak in all of the eye pleasing amenities of it. But I want to be away from it a little bit. And I would like to write and get in my creative state. So I want a little spot.
M: The zone. That zone. You want to go in... So...
R: I don't want a bunch of people talking to me.
M: $\quad$ Right. So $A$ and $C$ is where you're going to go to your zone?
R: Yes, ma'am.
M: Okay. And Quentin, which appeals to you the most?
R: I want to say C. For me, it's C.
M: Okay. Talk to me about C. Why?
R: The bench in front of the water. When I'm around water, I want to sit and I want to look out at the water, reflect, and think. And $C$ is that perfect opportunity to do all of those things? I can sit out. I can stare. I stare out into the water. Stare out into the water. And I reflect and reach that level of calmness and serenity.
M: Okay. Okay, great. And so let's talk about... Here are the importance... Other features. So what about these here? Let's start with you, Quentin. And then we'll go down the line again, but backwards. So Quentin.
R: Yes.
M: Which one? Which of these photographs do you see yourself participating in?
R: Well, I would go back to what I said earlier about the dock. So I would lean to E.
M: Yeah. E is where you could have your own boat and you can go down there and do your own boating or maybe rent one.
R: Right. Correct.
M: Okay. Valentine?
R: Actually every picture here, you have the opportunity to do something like that down at the river right down from me, so...
M: What do you see yourself doing?
R: I wouldn't be in it because that's not my fishing experience, either. My fishing experience, like I said, was off the shore.
M: Okay, so you're not in it like the guys in $F$.
R: Yeah, I'm not there. I don't really want to do the boating thing that much. I would maybe do H. But G. I would like to be off to the side. I can see it. I can be near it. I could be sitting on one of those rocks. But I don't really want to be in it.
M: Okay. Crystal?
R: I agree. G is about the best for me. I have a full view, and I don't have to actually engage or be in it.
M: Okay. What about $H$, though? Do you see the boat in $H$ ?
R: Yeah, I was going to say.
M: Or they have those students or... They look like young people, students going for a boat ride. Is that boat big enough for you, Crystal?
R: Not really. No.
M: Okay. Okay. Johnny?
R: I would probably do H .
M: Okay. Tell me about that. It looks like a nice, big enough boat for you?
R: Yeah, it looks kind of safe.
M: Okay. And Montrell?
R: $\quad H$, as well. It's between $G$ and $H$.
M: Okay. Okay. All right. Let's go to the next one. Do we have a next one? No, we don't have another picture. Okay. So some of you talked about a site... You don't want to be around too many people. You want to go there to hear your thoughts, is what l've heard. To hear your thoughts. To just be calm, cool. Easy breezy. We heard about bike paths, bike lanes, skate lanes, even. But nobody's mentioned the presence of trash or recycling bins.
R: That's a good point that you make, too, because you do see a lot of litter in the water. Especially, like I said, they have steps that you could walk down, and you could walk right into the water if that's what you into. But

## Segment A: Urban 1; July 9, 2022

I sit on the steps. And the steps go the whole couple miles down the river. So you find a place and you sit there. People are jogging up at the top where the steps start down. And people are riding bikes down there and all like that. And they do have trash cans, they do have receptacles at each point of egress. However, it doesn't seem like too many people use them. You see a lot of that and you see a lot of, I guess, ducks are down there. Ducks and geese come down there. So there's a lot of waste, animal waste, that pucker the steps, from the birds. And they do clean them at times. You'll see that they went down there with a high power hose and washed it off. But that's only when an event's coming. If an event's coming in August, well a week before that event, it is going to get cleaned. But right now, when I'm going down there, I have to pick a spot where there's not waste. And there's not...
M: So there's a problem of litter. And then, of course, duck poo-poo.
R: Yeah.
M: Okay. Crystal, do you see a lot of trash cans, recycling bins available in your walks?
R: There are a lot of trash cans around, that's for sure. But you can tell that there is not somebody that regularly comes and takes care of the trash and things like that because it is everywhere.
M: $\quad$ So it overflows and then there's litter?
R: Yes.
M: Okay. Has it gotten worse? Or has it gotten better?
R: $\quad$ No, I think it's been constantly the same. I don't really see any improvements or anything like that. Other than maybe they... I don't know if maybe they clean up maybe at the end of the night or something like that. And it just depends on the time of day that you come and what you see. But it's not something that's done all day long. Just depending on when you show up, you may see an overflow of what's been going on most of the time.
M: Okay. Okay. And Quentin? Quentin.
R: Yeah. I'm here. Sorry.
M: No, that's okay. So the presence of trashcan or recycling bins. How's the litter situation in the places that you go? The bodies of water that you go?
R: It's not bad. There's plenty of trash cans and recycling bins. DC is different because where the major bodies of water are, the Tidal Basin, the Wharf...
M: So they have a lot of...
R: They're controlled by the national...
M: Oh, the federal... Yes. Yes. The federal government. Right.
R: Yeah.
M: $\quad$ So they're on top of it on it. They're on top of it.
R: $\quad$ For the most part, yes. They're on top of it.
M: Okay. And Johnny?
R: Yeah. For the most part, there's always a lot of recycle, where into the lake I go. And sometime they have people walking with reacher-grabber tools, picking up the trash and making sure it goes on the garbage.
M: Okay, so the litter situation is much better where you are?
R: Yes. Yeah. It's controlled. Yep.
M: Okay. Montrell?
R: Could you ask the question again?
M: Yeah. We're talking about, do you see the presence of trash cans or recycling bins? We want to know...
R: Oh yeah.
$\mathbf{M}$ : $\quad$... if this is an amenity that is needed or are there enough?
$\mathbf{R}$ : Oh, it's needed. There's never enough.
M: Okay, tell me why. How far do you have to go? If you're drinking a can of soda, how far do you have to go... Or juice or...
R: It's literally right there. Even when I walk outside my house, there's a trash can literally, not too far from the bus stops, things like that. But...
M: So more trash cans are needed, but there's trash cans everywhere. What does that tell me?
R: $\quad$ That the more you recycle, the better.
M: Okay. But you said there's a lot of trash cans everywhere.

## Segment A: Urban 1; July 9, 2022

R: Nobody's using them. So...
M: $\quad$ Nobody uses them.
R: So you put a little recycling bin, but maybe people like to recycle a little bit more.
M: Okay. Okay. So how the recycling bin would make people think, "Okay, I won't throw..." So they're going to throw it on the floor instead? I'm trying to understand.
R: $\quad$ They already throw it on the floor instead. They throw it on the ground instead of putting inside a trash can. So maybe been a recycle bin beside it. Maybe they'll, "Oh, let me..."
M: That'll help. That'll motivate people to throw that plastic bottle or that metal can inside the recycling?
R: Yeah.
M: Okay. Okay. I heard some of you talk about having someone to give you help, like a park ranger. I think that was Valentine. How do other people feel about just having someone there always for information? Crystal, I see you nodding your head.
R: Yeah. I think there should be somebody there at all times. You may have somebody that has a medical emergency or anything like that. Somebody that can step in and get help for you. There should be somebody there.
M: Okay. Like CPR trained, answer any questions, that sort of thing. Okay. Okay. I heard about safety. Valentine also mentioned it too, because of the Susquehanna's lack of safety features. Making sure to deter people from swimming in certain areas. Life jackets, boating tips, how to enjoy the water safely. It sounds like you guys don't have that available. Would you like to have those available?
R: Yeah.
R: Yep.
R: Yes.
M: Okay. Yes? Yes?
R: Yes.
M: Okay. Crystal, I know I'm not getting you in the water. But if you had that person there, like you said, but they also had boating and safety, how to... Would you like your children or your future grandchildren even, to have that class? Even learn how to swim? What do you think of those kind of things, Crystal?
R: $\quad$ Right. I think that it should be available to anybody that wants to have that information. Yeah. Because that's one thing. My kids, they do know how to swim because I didn't want them to be like me.
M: Right.
R: But anybody who wants to have access to that, they definitely should. And it should be an option.
M: Okay. And the availability of rental equipment, like the paddle boat, maybe even rent a fishing pole. Of course, the kayak and the canoe. I know I'm not getting Crystal on it and Montrell. But things like that. Should they be free? Should they be just not so expensive? A good, affordable cost? How do we feel about that?
R: I think they should be inexpensive. Some type of a fee, but not extreme. Because a lot of places that you go, everything just costs so much. So if you want to bring people in for family things and stuff like this, make it a little bit more inexpensive for everybody.
M: Okay. Any other thoughts from Crystal? Anyone agree with Crystal? Or disagree?
R: $\quad$ Yeah, I agree with her.
R: I agree.
M: Okay. Okay. So let's rank these. Which of these are the most important? So I'm going to say, "Which would go first?" The number one amenity that you want near the body of water where you frequent. What's the number one amenity?
R: My number one amenity is someone giving... Like you said, providing information. That would be showing all the possibilities that exist there and how to do them safely. How to safely engage in them.
M: Like an information...
R: Yeah, someone has to be there. This has to be something that's consistently...
M: Permanent.
R: $\quad .$. provided. I think that it would attract more people because... And then I'm more like Crystal. I don't want be on it, but I might want to go try. If you can put it to me in a way that I can see it and I know that you provided me with some safe, valuable information, I might want to try one of these other amenities that are offered down here. I might get on a little boat. I might want to try something that I wouldn't have tried before, if I had readily access to information. And possibly if there's a live person doing it and a demonstration...

## Segment A: Urban 1; July 9, 2022

M: A tour. A demonstration.
R: Demonstration. Then I might get my feet wet. I might do it.
M: Okay. Crystal, give me your top amenity.
R: $\quad$ Nice sitting areas. Nice places where you can sit and just view the entire area. And just quiet area to relax.
M: So the quiet area to relax is your top feature that you rank number one. Johnny?
R: I would say security, for me. Just making sure, especially with everything going on now and a lot of crazy people out there, you want to make sure. You're spending quality time with your loved ones in the lake, beach, wherever you go, but making sure that you're safe in case anything happens.
M: So some kind of security available there, in case something goes down in the parking lot. There's a fight, or there's in instigation, people looking at you the wrong way.
R: Yeah.
M: Right. Okay. So some kind of security available there. Quentin, what's your top amenity? Your top number one amenity that you would like to see?
R: I would go back to what I said earlier. For those that want to be by the water and not get in the water, just have other things like bike rental, or scooter rentals, things like that. People can enjoy being by the water. They don't want to get in the water or be in the water. Those people will still have things they can do.
M: Scooters? Yes. You can enjoy the water without being in it, is what you're saying, Quentin. Right?
R: Yes.
M: Okay. Awesome. And Montrell, what's your number one feature that you want that you'd like to see more of?
R: Food.
M: Oh, this is Mr. Wawa talking, here. I'm guessing you want a Wawa in every body of water.
R: Maybe a Sheetz. Maybe a Sheetz. And a restroom, some amenities like that. A restaurant.
M: $\quad$ So food, dining amenities available.
R: Maybe a swimming class for Miss Crystal. Mr. Valentine can know about Wawa and stuff.
M: So a swim class maybe. What about water aerobics? What do we think of that?
R: Yeah. I think that's lit.
M: Mean you don't have to swim-swim.
R: But you're still exercising.
M: You could still exercise in the water. You're in the waist length water. Okay. Okay. All right. Let's go to the next section then. Okay, we are going to see the screen again. We're almost done. We're at the 2:30 mark. We're almost done. So tell me if you agree or disagree with these statements here. And we're going to go to here. So I want to do more to help make local creeks, rivers, and lakes healthier. I'll read that again. I want to do more to help make local creeks, rivers, and lakes healthier. l'll start with Montrell.
R: Agree.
M: Okay. How strongly?
R: Just regular. Because I'm not...
M: A general agree? Why do you feel that way?
R: Because I think the water is dirty. A lot of our water is dirty. So I would like it to be cleaner, but I'm not really doing a lot right now to do it.
M: Okay. But do you want to... But you said you agree that you want to do more?
R: Yeah, if it's free.
M: Okay. All right. Quentin? What do we think of this statement?
R: I agree. Okay.
M: Strongly? Or just a, "Eh. Agree."
R: $\quad$ No. No. Strongly. I'll go back to what I said earlier. I think there are parts of the Anacostia that, if you follow the river, that are extremely beautiful. And hopefully, one day the river will be clean enough where I would want to, not just be around it, but actually go in it. Maybe not swim, but on a boat. Right now, that's a hard no for me.
M: Right.
R: It's a hard no. But if we want to continue to have these wonders of nature and be able to enjoy them, we need to take care of them and not pollute them.
M: Awesome. Okay. Crystal?

## Segment A: Urban 1; July 9, 2022

R: I somewhat agree. And the reason I say, "somewhat" is because I don't know what I, personally, as an individual would be able to do to make the water healthier because my one effort could be undone by maybe, 20 other people.
M: Right. Okay. Valentine?
R: So you brought this question up. It's nothing that I thought. I have really thought, what could my contribution be? Because I definitely... It provides me with something that makes me feel very happy, and enjoyable, and at peace, creatively inspired at times. So I think I would want to do it. Now that you've brought it to the forefront that I would strongly would like to be involved in a way that maybe so someone else could feel the same feelings that I feel, or get the same enjoyment, or different but similar enjoyment, from these bodies of water that are close to me.
M: So you want to do more but you...
R: Yeah.
M: ...don't know how?
R: Yeah.
M: Okay. And Johnny?
R: I would say I somewhat agree. Just because it doesn't only take one person to make the creek, river, or lake healthier. We can be taking little steps to make it better, but it's what others are going to do to keep it that way.
M: Right. Okay. So let's go to the next statement then. My actions contribute to water pollution where I live. My actions contribute to water pollution where I live. So Johnny, since you mentioned it in the last statement, we're going to start with you.
R: Oh, man. Do my actions contribute? I would disagree for myself, but I seen cases in the lake where I seen kids throwing their waste into the water.
M: $\quad$ Not you, personally?
R: Yeah. But I seen others do it.
M: Okay. Quentin, what do you think of this statement? Do you agree strongly? Do you somewhat agree? Disagree somewhat? Or disagree strongly?
R: I would say agree. There's a lot of things that I could be doing to help not contribute to pollution of water. And I know for me, I like drinking bottled water instead of tap, but I use a lot of the plastic bottles. Plastic bottles instead of buying a filter and putting on the tap or something like that. So I think I could do better, and consider how much bottled water I'm drinking. Which I am doing now. I have a bottle. I have a bottle I fill. And even though I don't like the tap water...
M: Right.
R: But I fill that up now and just keep refilling it. So that won't be one more plastic bottle that could end up getting down and polluting the waterways.
M: Understood. Understood. Okay. Crystal?
R: I disagree. I can't think of anything that I do, personally, that would contribute to water pollution. I just disagree.
M: Okay. Okay. Okay. And Montrell?
R: I disagree.
M: Okay.
R: I smoke cigarettes. That's pretty much it. But I don't really litter inside the water.
M: Okay. So smoking cigarettes, how is that affecting water pollution?
R: I don't know. I just do my...
M: Do you throw your butts on the floor?
R: Yeah.
M: Okay.
R: I'm not supposed to admit it. Huh?
M: What?
R: I'm not supposed to admit it.
M: No, but that's okay. This is what we're here...
R: Everybody else admitted to theirs, so I just [inaudible 01:33:25] mine.
M: This is the no judgment zone. No judgment zone.

## Segment A: Urban 1; July 9, 2022

R: Yeah.
M: Okay. Thank you. Valentine.
R: I don't believe that I do things that contribute to water pollution, but I don't know that I don't do things. There're things you know, there're thing you don't know, and there're things you don't know that you don't know.
R: Yeah, that's true.
M: $\quad$ That is true.
R: I may be doing some things in my everyday life that contribute to the overall what pollution, where I live.
M: And you don't know if you're polluting or not?
R: I don't even know.
M: Right. So you need more education on that and so you're kind of like a question mark on this one?
R: Yeah. You know what I mean? Because I can say, oh, I throw my trash in the right receptacles and no, I'm not flicking my cigarette butt out on the street and in the gutter it runs... I don't know. I don't what I don't know.
M: Okay. Awesome. Okay, so now we're going to go to another section, which is a section where we're thinking about our actions. So if you don't know what you don't know, we're going to talk a little bit about actions that you can control, that you can do that could help water be healthier and the land cleaner and healthier around you. So this might include picking up litter where you see it. Stop using pesticides if you have a garden. Some people use up Roundup or bug spray to kill the bugs on their plants. If you do gardening, using less fertilizer, picking up after your dog, whoever has a dog.
Some people don't like that. They don't like to bend down and get their dog poop, but that runs into the storm water drain and that... With ducks, you can't go after every duck and pick up their... because they're not yours. They're free. But your own dog for example, you could pick up their poop where you go. Or if, for those of you that live in a single family home or a townhouse, you could collect rain barrel water (the rain that comes off in the drain spout). You could get an empty barrel, and that water you could collect to do whatever you want with it. You could water your life, you could wash your car, you could do whatever, or wash the pavement around you instead of letting it run off into the street and carrying pollutants that could potentially go into the river and so on. So those are things that can be done. And there's many more. I can't list them all.
Can anyone think of a way that they can change? Let's say, for example, Montrell with his cigarette butts. Let's say, Montrell, would you consider not dropping your cigarette butts on the floor?
R: Yeah.
M: As a means to curtail water pollution? See, and I don't want to single you out, but I'm using it as an example.
R: No, that's okay.
M: So what are things that we could do? So think about your everyday life.
R: How about putting it in a trash can or something?
M: Okay. Putting your waste in a trash can. Okay. What are other things we could start doing?
R: Maybe hold community service where you get together with some people and help clean.
M: So sign up for a community service where they're cleaning up. Like the Anacostia or the lake where you go, et cetera?
R: Yep.
M: Okay. Crystal, I see you nodding your head. Tell me what's on your mind.
R: Right, I agree. Basically picking up trash and litter that you see on the streets around your house and the storm drains and things like that.
M: Okay. Valentine?
R: Get more information. Make a conscious effort to get more information. Not just leave it up to chance and happenstance.
M: Okay. Quintin? Got to give him time to put on his mic. So what are things that you could be doing in your everyday life that could curtail or diminish the impact of water pollution?
R: Just be diligent. And as I mentioned earlier for me, my biggest thing is the single use plastic bottles I drink bottled water.
M: To limit the amount of plastic water bottles that you buy, the single use ones get. Well, I'm going to show you mine. Get one of these things where you could fill it up with water, right?
R: Yes.

## Segment A: Urban 1; July 9, 2022

M: Okay. So that's what we mean. Okay. So get yourself a sturdier, reusable plastic bottle instead of doing the single serve. Okay. Valentine, I have a note from the beyond. They want to know what is the information that you want to know more about?
R: Well, I'm saying like... Crystal gave the example of cleaning the drainage areas around her house and picking up things that go... The information I would say is what are other things that I could do to help make my water more?
M: So you want suggestions?
R: Yeah, but accurate information because we know that. Okay, she gave a good example of picking up litter in your area that might go into the waterways or into the drainage areas. But what are other things that you can do? You know what I mean? Or might be things that you can start right in your own house doing and then out into your community. What are things that I can do to make sure that I'm doing my part in keeping my water... You know what I mean?
M: Safe and clean?
R: I really don't know. I really don't know besides the common sense ones, she said pick up the trash, the clean your drainage area. Besides something like that, I don't know other things I can do.
R: I can actually add to that. If you're using grease like if you're frying foods or whatever, don't pour the grease down the drain.
M: Don't pour the oil down the spout. Yeah.
R: Things like that.
M: That's one thing. Yeah. So you want a list of things on how we can all be able to lessen the impact of water pollution in our everyday homes and in our surrounding areas and communities. Perfect. So this is somewhat of a change in lifestyle habits. So let's talk about it. How motivated are you in implementing some of these things right now in your everyday life?
R: Well, to be honest, today I was a hundred dollars motivated. Do you understand what I'm trying to say? But now beyond that, it has given me the... Opened up my ways and my thought process to things, to areas that I wasn't thinking about before. And I can honestly say that I benefit from my little bench or little steps down by the waterway. When I go down with my journal, I benefit from the effect of the water and what it does for me. So why wouldn't I want to give back and improve? You know what I mean?
M: You get the benefit of that beautiful bench. So yes, it's a reciprocal relationship with the water.
R: Yes.
M: So you want to be able to give back to that benefit, kind of pay back.
R: But I wasn't thinking about it until today. This sparked it to, now I got to say, well I benefited from having this dialogue today, however, what about all the other days? I'm so thankful and grateful for what... It helped me create, it helped me get peace of mind that day. But what have I done for it? So now I'm thinking more along those lines based on this.
M: Okay. Anyone want to add to that? Anyone?
R: No.
M: No? Okay. All right. So here is something that Valentine was kind of touching on, and I'm going to read this to you and I want you to tell me what you think of this statement. Some people think that bringing people in contact with nature, and especially the water, makes them care about the natural environment and want to do more to protect it. Just like what Valentine was saying, other people think that just spending more time out in nature or near the water doesn't translate into caring more. For Valentine, it means that, especially during the conversation that we're having today. What do other people think? Crystal, what do you think?
R: I think it depends on the people that you're bringing there. Everybody has a different mindset.
M: So some people say tomato, some people say tomato, right? So people are so varied as far as how they're going to react to something. So you're iffy about that?
R: Yes.
M: Okay. Johnny?
R: $\quad$ Yeah. I got to piggyback from Crystal. I agree. It depends on the person. I mean you cannot change the person, but if you're more in tune with nature, then you're willing and motivated to do something to help bring change.
M: But here's the thing, to Crystal and Johnny and then maybe some other people, Valentine said that it wasn't until he had the information, the chat, the talking about it, that he didn't connect with that. So should we inform more on the impact of hey, here's the exchange if you want this, you got to give us that kind of thing. Is that what we have to do? Or is there another messaging that has to take place?

## Segment A: Urban 1; July 9, 2022

R: Yeah, I feel like we need more educational resources and maybe getting... Some people believe everything the news say, so maybe getting news involved so they can kind of spark motivation on people. Because I feel like the media's only portraying global warming, but nobody's really thinking about specific things like, for example, water being polluted or stuff like that.
M: Okay. Going back to Valentine, here's another question from the beyond. What was it in today's conversation that sparked that little... What made that light bulb turn on in your head? What was it? Was there something specific or was it in general, the whole thing?
R: Well, look, you had had a diverse panel right here and everybody, no matter what, had a similar take on what being near the water does for him. And you know what I mean? No one said it had a bad effect from being near the water. Some of us don't want certain aspects of that whole exchange. I don't want to be out on a boat, Crystal don't want to be... I understand those, but everything else was good. Everybody had a calming euphoric sense of tranquility, whatever. The water did something for us. So here's my thing. I'm taking this for granted, this part of nature. I'm not even taking it for granted. I know there's literally times when I go there and because I want the end result, the result that it's going to get, it's going to do something for me no matter what. But I don't ever do anything for it.
And more than likely, I subconsciously do things that hurt it and deteriorate it without even knowing it. So having come to the fact that here's us, six or seven people in this panel, and none of us know each other, but we all get a great feeling from it. We all enjoy it to a degree. So I'm saying to myself, oh man, we all work different, we all do things different, but we all enjoy it. What can I do? I got to be more mindful of what do I do to ensure that it's at a state where other people will enjoy it. I don't want to destroy it. I don't want to deteriorate it. I want us all... We all do. I want us all, I want others to come to the same realization that I did.
M: Okay. Yes, exactly. That's the point. I think Crystal and Johnny were trying to make, some people are just hardheaded. They're not going to go that far into that. I want to be able to help bring people to that realization. What's the messaging that we've got to get around so that we could create a communication tool that will help people reach that enlightenment of, oh, if I take care of the water, the water's going to take care of me.
R: Take car of me. Yeah. Well I think it would have to be a unique messaging tool. Didn't Johnny say people believe the news, listen to the news. So the news could have more insightful information, but I think it'd have to be beyond that we use...
M: Does it have to be the park ranger kind of walking around, doing tours? Is that what it is? What that's going to get through? How are we going to make that connection?
R: I think we're going need a grassroot community effort. You know what I mean? Yeah. Just like you said, I would like more informational people down at the river front doing that.
M: So who? Like who?
R: I don't know if the city... Someone who's involved with park, like you said, park recreation. But I think you also have... It has to get those type of people...
M: I want the teenagers, I want the grandmas. I want the hard workers, office workers, working class, job workers, no job people, have a part-time job. I want everybody to be able to get this information. Crystal, what do you think?
R: Well, it'd be different targets for different people. For instance, with teenagers and younger people, they...
M: I want black people and brown people to go take advantage of this so that it's not only the white people enjoying it.
R: $\quad$ Right. So things like TikTok videos with people that they can relate to talking about this and telling them how it's going to benefit them and the things that they should do. They would watch and they would understand a little more than just seeing it in writing, stuff like that.
M: So having some social media demonstrations like TikTok, Snapchat, Twitter. Whatever the young people... The young ones. Okay. Montrell, Quentin, I haven't heard enough from you. What do you think?
R: The same thing. Take social media, a mix of things like that.
M: Okay. Quentin?
R: I definitely agree with social media. This generation's not really like... One, they don't watch TV, the cable's too high.
M: Cable's too high. We're not watching TV.
R: So they're streaming or they're creating content on TikTok or...
M: So what are the topics on the content? Like enjoying, Hey look, I'm on a little paddle boat. Or hey look, this is one bottle of water that you don't throw in the trash, it will end up here and showing the cause and effects of things. Is that what we're doing? What other topics should be covered?

## Segment A: Urban 1; July 9, 2022

R: How to enjoy...
M: How to enjoy the water.
R: How to enjoy the water... I can't really think of any others right now, but it should be in a way... Just this generation, they like bite size information so that they can...
M: Bite sized information, okay.
R: So they can consume really quick. So that's why I was saying make this information available in the mediums that they understand.
M: Okay. So definitely TikTok videos are it. And then like Valentine said, and I think it's important to know what are the causes and the effects. He doesn't know what he doesn't know, how is he polluting the water? But he knows that his actions could contribute to it. So would TikTok work in that space, Crystal or Montrell?
R: Yes.
M: Okay, tell me Montrell.
R: It's just social media.
M: Okay. So if I were to leave you in charge of doing a TikTok message campaign on the effects of what to do, how would you do it? Of course we would have to do a dance.
R: You would have to do a dance or a song. Hell, you could just talk into it and then you'll post it and then you put it on the for you page and put certain stuff on there and people will watch it.
M: Okay. Okay.
R: I could see there being, for instance, a skit. Like you're walking down the street with your friends and you're eating snacks and stuff and you throw them in the street. And how the snacks go down into the drain and how they get mixed in with the water and the pollution and the side effects. Just what happens from you out having fun with your friends. This is what happens.
M: That's good. That's a cause and effect.
R: The skit can go a little bit further, if you throw it down there and it's going down the drain and the water hollers back up out the drain, hey. You know what I mean? The water talks back to you, it tells you what you're doing wrong. Hey, why'd you do this to me? Something funny, something unique.
M: And it's low budget. You don't need a lot of money to do something like that. Okay. Okay. All right. So we have the last questions before we wrap up. Are you satisfied with the water access site that you currently have or do you want something more closer to you?
R: I'm satisfied.
M: You're satisfied, Crystal? Quentin, what about you?
R: I'm pretty satisfied.
M: Montrell?
R: $\quad$ Satisfied. I'm satisfied as well.
M: Johnny?
R: I'm satisfied.
M: Valentine?
R: Yep, I'm satisfied.
M: Okay. So let's do the last one. So here we're going to do imagination right now. I want you to close your eyes, if you want to you can describe to me the ideal public water access site. One that you can imagine located close enough to you that you would actually go there and interact with the water in one way or another. What does it look like? What features does it have? What makes you want to go there and spend time there? Okay. You can also say the things that it shouldn't have, as well. I know nobody wants to be around a lot of people. I already heard that. So Crystal, I'm going to go with you first and then we'll go around and then we're done.
R: Okay. Well it would be one that's clean, that's free of trash and debris. One that you know can sit and just enjoy the scenery. You can...
M: So places to sit?
R: Places to sit, places where even you can walk your animals or your pets. A walking trail. And for anybody that's getting into the water in any type of way, controlled access. It shouldn't be that you can just walk up and do whatever it needs to be some type of a controlled...
M: For safety reasons, like Valentine was talking about?
R: Right.

## Segment A: Urban 1; July 9, 2022

M: Okay. Okay. Anything else?
R: That's about it.
M: Okay. Montrell, I know you want to build a Wawa in every park in the United States of America for that iced coffee. So let's just imagine that we... Let's put that out of the way. What are the things that you want to have in your ideal? What does your ideal spot...
R: Like a slide, a spa over there. A restroom.
M: Like a water slide you mean?
R: Yeah.
M: Okay. So a safe, enjoyable, swimming sort of area that's not too deep where people could get on a slide and go down in the water?
R: Then a boat where you can go on boat rides and stuff like that.
M: Okay. So nice boat rides.
R: Yeah. You can go shopping.
M: Okay, so shops and restaurants.
R: Like clothes, your restaurants... And Wawa.
M: Okay. All right. Anything else?
R: $\quad$ No, that's pretty much it.
M: Okay. Johnny, what's your ideal spot?
R: Oh, I'm sorry. A boardwalk too. I like...
M: Oh, a boardwalk. Okay.
R: Yeah, you got to have a boardwalk over...
M: And a pier, like you said, boardwalk and pier. Okay. Johnny?
R: Yes, it would have to have clean water, a boardwalk, maybe a food stand that's not too expensive so that if people want drinks or food, they could get some.
M: What about food trucks? Would you like some food trucks to come circulate some food trucks?
R: Yeah, but it would have to be diverse. Some Latino food, some soul food. Targeting every type of race so that more people could come out and have fun. Definitely do more events, like parties or a day at the lake so that anybody could come out and just learn about it and enjoy the features.
M: So have educational events, but also a planned event where people can come learn more, do some, I guess, I don't know. It sounds boring, but I know what you mean. To have someone talk to them about the lake and give education behind it, that sort of thing.
R: Yeah, some of it's partially like that, but also having, let's say a paint and sit at the lake where you just sit down and paint. Or if you like to write creative writing or poetry, maybe create a group that does an open mic near the lake.
M: Oh, that's fantastic. Okay. Quentin, what's your ideal public water access site like in your mind?
R: Well, ideally I want to see something where there're options for people who want to get in the... who actually want to enjoy the water. And there're things for people who don't want to get in the water but want to be near the water so they have a way to enjoy the area as well.
M: So a mix of on the water activities as well as off the water activities?
R: Yes.
M: Okay. And then Valentine?
R: All of the above. Everybody's already said it. All of the above.
M: Okay. Can't think of anything else to add to that? Okay. Because we have all the safety stuff that you were talking about earlier. Controlled access, we have the amenities. All right. I want to give you a round of applause to everybody. Congratulations. You did it. Yeah. Give yourselves a round of... Nobody's clapping their hands. Okay. But you will clap your hands after you get those a hundred dollars after this group, right?
R: Yeah, I was clapping for you.
M: You were? Ok. Good. I just can't see you. Okay. Maybe like this, you were clapping. Yeah. Okay. All right. Well thank you so very much. You've been a wonderful group. We learned a lot. And you should be getting the hundred dollar gift certificate very soon in your email box. If you don't see it, check your spam or junk folder. And if it's not in there, contact steve@opinionworks.com. Okay? Okay. Have a wonderful...
R: You'll call us back again for another group, right?

Segment A: Urban 1; July 9, 2022
M: I hope so. We hope to do that. We definitely hope to do that. Thank you so very much for sharing your afternoon with us. Take care.
[END]

Moderator: Even if you have, that's another cue. I'll explain all of this in about... I'll try to make it in less than three minutes. So my name is Shirley. I am an independent market researcher. I work for Opinion Works, like Steve, who's also on the call. And Steve is going to be helping with audio visuals. I am not going to be taking notes. I talk a lot with my hands, but if this is going, my hands are going too. So, it's just the way that I am. We are not going to take notes of everything that you say, which is the reason why we record. However, that does not mean that we're going to use your identity, or your facial features or your face in our reporting. So what we'll say is, when we want to quote something that you said, we'll say, "A respondent in Monday's group said," as opposed to, "Ann said..." Or "Margo said..." Or "Melissa said..." Caitlin said..." Or "Elizabeth said." What that does is that it inspires confidence in our participants, so that they feel free to share their opinions. The good, the bad, the ugly. I want to hear it. Steve wants to hear it. You're not offending me or Steve in any way, shape or form. I want you to let it out. Tell me about it. I mean, trust me, I've heard it all in 25 plus years doing this. Our goal is to listen, to learn, and to get you to tell us your exact, accurate feelings as best possible. That means that sometimes people might have different opinions. Guess what? There are no right or wrong answers. If you feel shy about speaking your mind, I may call on you, but I don't want you to feel like I'm picking on you. I want you to share your opinion as freely as possible.
And yes, I will call you, like "Ann, Elizabeth." Or "Melissa, Caitlin, Margo." Please don't feel like, "Oh, she's picking on me." No, no, no. I need you to represent your neighborhood, your city because all of you are roughly in different states and different cities, roughly in the mid-Atlantic region. So we want to be able to hear from everyone. And that said, once we get to talking and jiving with our topics that we'll be discussing, I would like to ask you to please speak one at a time since we are recording.
Look at that baby. Oh my God, I can't wait to meet the baby. Okay. Do you, Elizabeth. I'm a sucker for infants, except when they grow up. Anyways... I have a 24 year old daughter, so I've been there, done that. Just speak your mind. Feel free to speak your opinion, even if the rest of the group doesn't feel the way you do, and just have fun. This is a fun thing. And the best thing is that you get paid. Just talk your opinion. Easiest money you'll ever, ever make. So with that said, do you have any questions for me, Margo? Any questions for me, Margo? No?

## Respondent: Nope.

M: Okay. Melissa, any questions for me before we begin?
R: $\quad$ No, I don't think so.
M: Okay. Caitlin, do you have any questions for me?
R: Nope.
M: No. Elizabeth, any questions for me?
R: No, ma'am.
M: Okay. And Ann, any questions for me?
R: I think I understand. I'm fine.
M: Okay, perfect. Awesome. All right, so we did the early bird. Next, we are going to our introduction. So there's about five or six questions kind of combined into one. And I'll prompt you as we go through the prompt. So where do you live? Who do you live with? Give me an idea of your typical day, and something that worries you in the back of your mind, kind of ruminating there, like eh... And then something that gives you hope, joy, and satisfaction. So let's start with our early bird winner. Hi, Elizabeth.
R: $\quad \mathrm{Hi}$.
M: How are you? How's the baby?
R: Good.
M: Baby sleep? Oh look at that baby! Oh, my goodness.
R: $\quad$ Nine days old.
M: Oh my goodness.
R: $\quad$ Nine days old?
R: Yes.
M: Looks like that's a big baby. That's a big baby!
R: He was six pounds, 14 ounces.
M: $\quad$ But he is long.
R: Oh yes, he's really long.
M: Oh, how lovely. Well, congratulations.
$\mathbf{R}$ : How tall is the father?

## Segment B: Urban 2; July 11, 2022

M: What'd you say?
R: How tall is the father?
R: He's actually shorter than I am.
M: Okay, Well, all right. So Elizabeth, where do you live? Give me city, state area, that kind of thing.
R: I live in Binghamton, New York.
$\mathbf{M}$ : $\quad$ Okay. And is that, that's where the university is, right?
R: Yes.
M: University there.
R: That's it, yeah.
M: Yeah. SUNY.
R: Yep.
M: And of course, I know you live with your baby. Who else do you live with?
R: I have my husband and I have two daughters who are three and two.
M: Oh, lovely. Oh wow. What, three, two, and zero? Right. Wow. So you're busy.
R: Oh, yeah.
M: So the next question is your typical day. So hit me with it.
R: Hectic. I'm constantly moving, but l've had surgery, so I'm down for the count at the moment, but usually it's busy. I have two fur babies, three actual babies, and I'm raising an adult baby.
M: Oh, okay. Is that, may I ask if that's the husband?
R: Yes, that's the husband.
M: Okay, I got it. Okay. And something that worries you and you know, something that gives you hope and satisfaction. So...
R: Constant bills worry me, and satisfaction is seeing my girls and my son and my fur babies happy at the end of the day. And knowing they're loved, and taken care of, and sleeping peacefully in their beds.
M: Wonderful. That's an awesome response. Thank you Elizabeth. Okay, Elizabeth, you get to pick who goes next. So can you see our other respondents?
R: Let's do Caitlin.
M: Okay, Caitlin, you're next. Hi.
R: Hi.
M: Okay, so where do you live?
R: I live in Richmond, Virginia.
M: Okay. And I see a fur baby in your background.
R: That's one.
M: That's one of them. Okay. So who you live with?
R: Just the fur babies, but there's six of them, Four cats and two chinchillas.
M: Oh my goodness. Wow. And then give me an idea of your typical day.
R: Typical day, I usually wake up, get ready for work, take care of the pets, go to work, come home, take care of the pets again.
M: Okay.
R: Have dinner, take care of the pets again.
M: So it's like a cycle, right? Yeah. Okay. And so things that you're worried about, and then something that gives you joy and satisfaction.
R: Worried about... Right now I'm kind of worried about my finances with everything costing more, and some financial mishaps that have happened recently, don't really have enough money to pay for things right now.
M: So you're juggling with a lot?
R: Yeah.
M: Yeah. Okay. Well, I hope things... Well this hundred dollars are good. Definitely going to come good your way. And then something that gives you joy and satisfaction. Hope.
R: Joy, and satisfaction. I really enjoy traveling. I just got back from a vacation, so that was mostly nice.
M: Good.

## Segment B: Urban 2; July 11, 2022

R: $\quad$ So anything like that, that I can look forward to my next trip or reminisce about trips that I've had is something I really enjoy.
M: Okay. That's awesome. Thank you. Caitlin. Who goes next, Caitlin?
R: Let's do Melissa.
M: All right, Melissa, you're up. Thank you. So Cait... Melissa, where do you live?
R: I live in York, Pennsylvania. And it's like south central Pennsylvania area.
M: $\quad$ And who do you live with?
R: My boyfriend and my dog.
M: Okay. And give me an idea of your typical day.
R: Well, it depends on the day. Sometimes me and my boyfriend have some side jobs that we work, so if we have something like that going on, I go with him. If not, then I send him off to work and I'll do my thing at home. And then the weekends we try to relax, but still always trying to hustle for extra money all the time when jobs we can get.
M: Yes. Okay. And then something that you're worried about, I'm assuming it's the hustle, the money, the situation, and then something that gives you hope and satisfaction. So...
R: Yeah, I mean the financial stuff in general and just... I'm on disability, and I worry about his job security, stuff like that. But all financial related sort of. But we have a vacation coming up soon, so I'm looking forward to... we're going to Lake Erie, going camping.
M: Oh, lovely. Lovely.
R: Yeah, I'm huge into the outdoors, so I'm really excited about that. It'll be a nice break.
M: Well, we're going to be talking a lot about the outdoors today, so l'll make sure to get your tips and tricks. Okay. Okay, thank you. Melissa, who goes next? We have Ann and Margo.
R: Let's go with Margo.
M: Okay, Margo, and then Ann, you'll close out this section. Hi Margo.
R: Hello.
M: $\quad$ How are you? And where do you live?
R: I live in Tacoma Park, Maryland, which is just barely outside Washington DC.
M: Who do you live with?
R: $\quad$ And I live with all five of my cats.
M: Oh, lovely.
R: Yeah...
M: We got a lot of cats, feline energy in this group. I have a cat too. Well, it's my daughter's cat, but of course I'm the grandmother, so I take care of him. Give me an idea of your typical day.
R: So my day is kind of upside down because I work overnight, so today's my day off. So I, unlike both people, I wake up around 4:00 PM, and do the usual taking care of the critters thing, get myself caffeinated, and out the door, and I leave work sometime between 7:30 and 8:00 AM and then do the same thing in reverse.
M: So it's the cycle where it's like this... Going on clock counterclockwise to everyone else.
R: Yep, exactly.
M: Okay. And something that worries you and something that gives you hope and satisfaction.
R: Something that worries me. I think like everybody, it's money to some extent. Another, and something that gives me satisfaction is that I live in a really amazing community.
M: Oh, good. Where was that again? In Tacoma Park, Maryland, you said?
R: Yep.
M: Okay. All right. Thank you so much, Margo. And then Ann. Hi Ann.
R: Hello.
M: How are you? Where do you live?
R: I live in Towson, Maryland, which is not far from Baltimore.
M: I'm very familiar with the area. Who do you live with?
R: It's me and my two cats.
M: Love it.
R: $\quad$ [inaudible 00:12:57] and Shelby.

## Segment B: Urban 2; July 11, 2022

M: We got cat lady energy here. Love it. I love it.
R: They're both 14 years old.
M: Oh. Tell me your typical day.
R: $\quad$ Typical day, I work from home, and I am a writer, and I also take surveys.
M: Oh, lovely. Okay. Something that's on your mind that worries you, and then something that gives you hope and satisfaction.
R: Okay. Well, something that worries me, it's a combination of money and politics. I do. They worry about stuff like the Supreme Court decision to up end Roe, even though it's been around for 50 years.
M: And something that gives you hope and satisfaction.
R: Something that gives me hope and satisfaction. Well, I find satisfaction in some of... Leisure activities.
M: Like which ones?
R: Like swimming or taking a walk or...
M: The outdoors.
R: Yeah, they're like outdoor outdoors activities.
M: Okay. Well thank you so very much. All right, thank you. And so some of you did mention spending time outdoors. What are some of the activities that you do? So are you swimming outdoors, are you walking? Let's start with Ann, and then l'll call your name so that we can kind of get feedback from everyone. So Ann, what are the activities? So you said swimming?
R: Yes, swimming and walking. And I walk around the neighborhood, or I'll walk to the mall and walk around in that. It depends on the weather.
M: Right.
R: If it's nice outside, l'll either swim or take a walk and if it's pretty outside, l'll go to the gym.
M: Where do you swim at?
R: Swim... I live in the apartment that has a pool.
M: Okay. Any natural water locations where you go swimming?
R: Not often, but I have been to Beaver Dam.
$\mathbf{M}$ : Where was that again?
R: Beaver Dam. It's in Cockeysville. I have been there from time to time.
M: Okay. Beavers Dam. All right. Awesome.
R: Beaver Dam. No S.
M: Oh, oh. Beaver Dam. Yes. Got it. Thank you so much. Okay, let's go with Caitlin. Caitlin, what outdoor activity do you like to do?
R: I also enjoy swimming. I prefer when the water is clear though, so I can see what's in it. Hiking, riding my bike, gardening.
M: Okay.
R: I can't think of...
M: Any sports?
R: Not really, no.
M: Okay, awesome. But that's wonderful. Thank you so much. Hey Margo. Oh, there's another kitty. Hi kitty. Margo's kitty. So what outdoor activities are you doing currently? When you have time. I realize that you work an overnight job, so if and when you are out and about, where do you like to go, and what do you like to do?
R: I live in a great town. There's trails through the nearby woods, and my neighborhoods, my town is full of the... I don't know if you're familiar with the Little Free Library concept...
M: Okay.
R: But it's just kind of fun to wander from one to another, and just kind of see what's there. Usually that's the only activity I have a ton of time for. I love swimming, but I love putting in natural bodies of water when I have the opportunity. But I don't think there are any that are particularly close to here.
M: Okay. All right, well we're going to talk so more about natural bodies of water in a second. So thank you so very much, Margo. And Elizabeth?

## Segment B: Urban 2; July 11, 2022

R: $\quad$ Sorry. I actually do multiple things. I have, like I said, I have kids, so I usually go swimming with them, and I take them to Salty Springs. I don't know if you've ever heard of that. It's waterfalls and we climb up the waterfalls with the kids.
M: Oh, beautiful. Yeah.
R: I'm introducing horseback riding this year to them. They play sports, we play it when we go out front, they take their ball and we kick it around and I walk. But the neighborhood I'm in, not so safe. So I don't do typically that without my husband. There is, like I said, I have two fur babies who are currently... Well I have this one right here.
M: Yes, yes, I do see.
R: And then I have another blue, they're both pits. I walk them constantly. We do all kinds of things, and we mainly go to Salty Springs, which is a natural body waterfalls. They actually just had a disaster not too long ago.
M: Oh no.
R: So it's reshaped, and we go explore it.
M: Is it safe?
R: Oh yeah. Lots of people go there. There's hiking trails. It's right in... Okay, so the border of Pennsylvania and Binghamton, it's when they had the flooding about two years back is when everything changed, I think it happened...
M: Yeah. okay. All right. Thank you. And Melissa, what outdoor activity do you like to do? Where do you go?
R: Well, I'm a huge geocacher, I don't know if you know what that is. It's basically, people will go out and hide containers with little trinkets and a log you can sign and then they'll give you the GPS coordinates. They'll take you to a neat little spot most times. Then you have to look for, it's almost like a treasure hunt.
M: Like a scavenger hunt of some sort? Oh, that sounds fun.
R: And we have a state park near me. Pinchot, here in Pennsylvania. It has a big lake. So we frequently go up there and do cookout.
M: So what, can you repeat the name of the state park? Pinchot?
R: Pinchot. Gifford Pinchot State Park is the full name of it. Yeah.
M: Okay. All right, thank you.
R: [inaudible 00:19:45] and all that stuff. Yeah.
M: Oh nice. Thank you so very much. Okay, so now that we got an idea, are there any fishing people on the...
R: Yeah.
M: $\quad$ Melissa, fish?
R: Yeah. How about canoe, kayak, paddle boarding? Anybody that does that here? Occasionally, sometimes even, or...
R: When I was younger, but not great. Not in years.
M: And maybe you haven't done it yet, but you want to try? Okay. All right, so let's go from now... What we do, kind of like that rational, everyday kind of stuff. But now I want you to go deep emotional right now. Close your eyes if you want to, because this is going to be a kind of a deep question. How does it make you feel to be near water? Natural water, not a pool. I'm sorry, Ann. Not your pool in your apartment building, but I'm talking about a waterfall. The river close to your home, the ocean, a lake, a pond. Just kind of take a few minutes... Or a few seconds rather, not minutes, seconds to think about how it makes you feel. And anybody that wants to start can go. How does make you feel?
R: Peaceful.
M: Peaceful?
R: Relaxed, and...
M: Relaxed.
R: Yeah.
R: Rejuvenated.
M: Oh, rejuvenated. Okay. What else?
R: [inaudible 00:21:32] soothing.
M: Soothing. Okay. Elizabeth, I heard you just turned on your mic. So what I want to hear from you.
R: Oh, I said rejuvenating.

## Segment B: Urban 2; July 11, 2022

M: Oh, you said rejuvenating. Okay. Thank you. Any other words? How does it make you feel to be next to a natural body of water?
R: Powerful there... I don't know if I heard powerful, but I feel powerful.
M: Powerful. Why powerful? Tell me why.
R: It's... I've always considered elements a strong thing to be around. So naturally incorporating them, rainwater, lakes, ocean, any kind of water like that, they're healing you. They want you... But I've always been spiritual in my own way, anyways. So just being near it, I feel rejuvenated.
M: Powerful cause...
R: Powerful.
M: Because it's rejuvenating. You feel powerful.
R: I feel like this is giving me the strength to keep moving forward. That it's there to help, even if you're sad, it's there to assist you.
M: So it helps even with your mental health is what you're saying?
R: Yes.
M: Okay, that's good. So it's not just a physical rejuvenation, it's an emotional, psychological rejuvenation.
R: Yeah.
M: Got it. Okay. Anyone else?
R: I would agree with that. The positive impact on my mental health to be around a body of water.
M: Okay. Anyone else want to comment?
R: Yeah, l'd say energized.
M: Energized. Good word. Okay. How about you, Caitlin? What are the words, can you think of, or feelings, can you describe when you're near a body of water?
R: Maybe enthralled.
$\mathbf{M}$ : $\quad$ Enthralled. What are you enthralled by?
$\mathbf{R}$ : Water is such a powerful element, and it comes in so many different forms like rivers, lakes, ocean, and it does so much for us and for the environment around us. But at the same time it's such like... It's so simple.
M: I got it. Oh, that's wonderful to put in those... It's so powerful. This could kill you, but it's also a healing element. And I guess that's where the enthralled kicks in. How does this happen? This is amazing. Right? Okay. Ann, any words to add?
R: A mix of awe and play, at least for the ocean. I remember playing by the ocean as a kid, but I would also feel awe because it was so huge.
M: So maybe even, can I define that as maybe nostalgia or...
R: Yeah.
M: Or you feel like a child again, you feel young again.
R: Yeah, I remember...
M: Yeah, I remember when I was a kid and I feel like a kid. It's a different, it's not rejuvenating. Cause rejuvenating is when your body's feeling all tired and then it kind of lifts up. But in the sense you feel young again as if you were... The awe and the wonder of a child. You feel that when you're near water. Anyone had any local areas in mind when you pictured that? Any local sites that you've been to when you were kind of imagining that feeling? Melissa?
R: Yeah, I did. Aside from the lake, there's also the Susquehanna River here. When I was younger, my dad had a trailer on an island in the Susquehanna River. So I spent my weekends on boats, and swimming, and also just four wheeling and all the fun stuff you get to do during the summer.
M: Is that open to the general public?
R: Oh yeah. I mean, it's a pretty big river, so it wouldn't be necessarily one that you could go white rafting on or something like you... But yeah.
R: [inaudible 00:26:14]
M: What'd you say, Elizabeth?
R: The Susquehanna runs up this way too, so I get it up here. It runs through my, where I grew up, Halstead, Pennsylvania.
R: Yeah.
R: So yeah, that's a pretty nice one. I like that answer.

## Segment B: Urban 2; July 11, 2022

M: Yeah.
R: Sorry, had that comment on that, that brought some memories back.
M: Yeah. So what... Margo, what bodies of water, you said there weren't many nearby you, but are there any, and if so, have you visited them?
R: Well, there are, they're just... For some reason there is no swimming in any of them. Although a lot of them, some of them it's not particularly safe, because of just the amount of pollution in terms of runoff from the roads, and bacterial contamination. But there's a creek that runs almost right behind me, pretty shallow, but it's also shallow enough to be very clear. So you can see all the fish and the occasional turtle and the occasional water snake...
M: Oh no, no snake. But the other things good.
R: It's fun to just stand on footbridges, and just look down and watch what's going on there.
M: Okay, wonderful. All right. And Caitlin, what's nearby, and what's near you that you liked? Where you like to go, and where you imagined yourself kind of going and feeling that rejuvenation, that peace, that comfort, that being young again. Anything nearby that you could think of, Caitlin?
R: $\quad$ There is a pretty big river that runs through the city, but I don't go to it very much because it's-
M: What's the name?
R: The James River.
M: Okay.
R: It's very dirty here, so it's not really good for swimming in or anything. But l'm also fairly close to Shenandoah National Park and there's like a lot of waterfalls and the waterfalls all have pools and stuff like that, and they're pretty-
M: So that's where you would go to the Shenandoah State Park? Is it State Park?
R: It's a national park.
M: Okay. National Park. Okay. So that's where you definitely would go, not so near. How far is it to you?
R: Well it depends how far you're going. I think it takes about an hour to get to the closest entrance.
M: From your house to the Shenandoah? Okay. So that's not too, too bad. Okay. All right. And Anne, what's nearest you? What body natural body of water is nearest to you?
R: I am not sure what's near me in terms of natural bodies of-
M: $\quad$ They have public, where there's-
R: But I do know that up north in Cockeysville, there's a quarry and I used to go there from time to time. That's the Beaver Dam Quarry.
M: Okay, so the Beaver Dam Quarry is somewhere where you have, when was the last time you visited?
R: I haven't been there in years, but I used to live near it, when I lived in Cockeysville, and I'd sometimes go there.
M: Okay, so you moved?
R: Yeah.
M: Okay. Okay. So let's see. Any changes in behavior? Is it life just getting in the way that's prohibiting more activity near natural bodies of water? Is it gas? Because we all know gas is expensive. Is it time? What are the inhibitions? What are the things that are keeping you from enjoying more time? Is it distance? Maybe the situation change. Maybe your car's not working so good, maybe you don't have a car and you depend on public transportation. What are some of the inhibitions that you've encountered for enjoying more time in these natural bodies of water? Anyone can start. Is it a physical thing? Maybe there's not enough access for your physical condition, rails or life jackets or, I don't know. I'm just talking off the top of my head so anyone can start, please.
R: What keeps me from going is pretty much not having time. My husband, he's the sole breadwinner in our house because he wants me to be a staying at home mom. So he works 12 to 12 shifts all the time. 12 in the afternoon to 12 at night, three days on, three days off, two days on, two days off. So it's all about time. And then we have mainly other responsibilities, being a parent. I have my mom in Pennsylvania, I go down and take care of my landlord lives right below me. I take care of his dogs and his child. Time.
M: Yeah, time.
R: $\quad$ There's not enough in the day for me to do everything I would like to do.
M: Okay. Anyone else? Caitlin?
R: $\quad$ Time is definitely a big factor because I could very easily go to the river and look at it for five minutes, but what's the point in that? If I'm going to go to the river or to the national park, I want to spend time there and

## Segment B: Urban 2; July 11, 2022

it's hard to find a whole day where I'm available and l'd like to go with a friend, someone else who is available too, where we don't have other responsibilities, we're both off of work and we're caught up on all our house chores and our pets don't need our attention. Or there's just something we haven't gotten around to in the yard or something like that. There's so much responsibility as an adult that it's hard to make time to do things that are just for pure enjoyment, that might be more than an hour or two.
M: Right, right. Margo, any thoughts?
R: For me, I mean I don't have a car, so there are some places that as the crow flies are not far at all for me, where I believe canoeing, kayaking, and paddle boarding are available.
M: Or even just sitting by the water.
R: That I'm able to do pretty frequently. There's a [inaudible] that runs, it's a 10-minute walk to get there, so that happens at least a few times a week. Not there, but walking or just spending time there.
M: So transportation is definitely like to get to the ocean is?
R: I mean the ocean, probably. Baltimore Harbor's probably a couple hours' drive, Ocean City about an hour and a half. But even some of the lakes or the Potomac River, it would take me one to two hours to get to any of them unless we took an Uber, which is not impossible, but it is a little costly.
M: Yeah. Quite costly. Okay. Well thank you Melissa, I haven't heard from you yet.
R: I don't drive. So-
M: Can you speak up a little louder please? I can't hear you Melissa. I'm sorry.
R: Okay. I don't personally have a car, so I rely on my boyfriend when we go out. And his schedule's pretty hectic with work and he has the other motor vehicle, so if we want to go on a trip, when we go to this trip on to Lake Erie, somebody, it's not really feasible, [inaudible 00:35:08] his hours and hours us home a lot.
M: $\quad$ Right. So the time, the vehicle, the money. Yeah. Okay. Ann?
R: Well, for me it's just easier for me. It's just easier to simply go downstairs than use the pool as opposed to hop in the car, drive up to Beaver Dam and then pay money to use the quarry.
M: Right.
R: $\quad$ The quarry, just [inaudible 00:35:44] is the quarry.
M: Okay. And let's talk about things that you like or dislike of the places you mentioned. So Anne, what do you like or dislike about the quarry?
R: The quarry is very nice and cool. And I remember they used to have a swing and the younger people used to go and jump into the water.
M: Okay. And what do you dislike about the quarry? Does it get crowded? Is there not enough parking?
R: It can get crowded. It can get crowded, that's the main problem with it there.
$\mathbf{M}$ : Are there facilities like bath restrooms?
R: Oh yes. There are facilities and there are snack areas.
M: Okay. Okay, good. All right. Caitlin, what do you like and dislike about the Shenandoah Lake area that you like to go to? It could be anything, something you like, you dislike.
R: I like that there's so many different locations where there's different waterfalls and different pools you can get in. But it being like all within a national park, sometimes you have to go on a really long strenuous hike to get to a certain location. It does cost money. I don't usually mind paying it because it goes to the national parks. We actually try to get an annual pass every year, every other year now, just because it saves us money in the long run.
M: Right.
R: But it's not something we can just go there on a whim. We have to have, my partner and I, or whoever I'm going with has to have available time since it takes two hours round trip usually, and that's not even including getting to the water.
M: Okay. When you get to Shenandoah, you also have to account for the time to get to where you would like to go. So yeah, I understand that. Margot, things that you like or dislike from that nice little local creek, let's say nearby your home?
R: I mean really that it's much too polluted to be safe for ... and most of it's too shallow for the most part for things like canoeing, et cetera. But there are some thoughts that are pretty close to me that are pretty deep enough and big enough to be pretty functional little swimming holes except that they're much, much too polluted. They're just too close to heavily populated areas.
M: Okay. I'm going back to Caitlin for a second. What about that river that you mentioned that was close by to your house? What do you like or dislike about that river? The James River you mentioned?

## Segment B: Urban 2; July 11, 2022

R: Well, I like that it's close and in general it has areas where you can do many different things. Like there are spots where you can do white water rafting, there are spots where you can do canoeing, you can go swimming, but it's very, very dirty. I know multiple people that have gotten infections from an open wound in that water and almost had to have a toe or finger amputated because of it.
M: Oh my God!
R: It's that gross.
M: Oh my God.
R: I haven't been in that water in years and years and years because ... you can fish in it, but they literally tell you not to eat more than two fish out of that river per year. I don't even want to be near that water.
M: Who would eat a fish from there? Oh yeah, you're right. Yeah, that would gross me out. Totally. Elizabeth, let's talk about the river that's close to you or that location if you can.
R: Yeah, I'm free, sorry. It would be the Susquehanna River.
M: Okay. What do you like or dislike about that Susquehanna area near your home?
R: So a few years ago on my part of the Susquehanna River, they put a disintegrator.
$\mathbf{M}$ : What kind of disintegrator?
R: I have no clue. I've never seen it personally.
$\mathbf{M}$ : What are they disintegrating?
R: I have no clue. It doesn't say. So they say right there in Hallstead or right here or right here where it comes up, it's really dirty. So l've only ever seen somebody try to dive off the bridge for mine. We've never really seen people in it. We see people go out on boats on it and they fish a little, but I've never seen somebody actually swimming.
M: Swimming.
R: Yeah.
M: $\quad$ You're guessing it's polluted?
R: Yeah, I've seen people fish, but they throw the fish back. I have never actually seen anyone personally, doesn't say people don't, keep the fish.
M: Okay, okay, because of the pollution.
R: Yeah.
M: $\quad$ So that's definitely a dislike.
R: We have my little hometown right there in Pennsylvania, right on the border, they say if you jump into the creek or river, you're going to come out looking green, you're glowing green. And I've jumped in that, I've jumped in so many times. I'm not green yet, but.
M: Okay, but you don't want to take chances either?
R: $\quad$ No. The only times l've accidentally jumped in is that either chased the kid that was jumping in or accidentally falling in from the mud.
M: Oh. Oh goodness. That's so dangerous. Yeah. Okay. Well thank you. Melissa, what's nearby you? I know you're going to Lake Erie, but what about near you, where you live?
R: Part of the Susquehanna-
M: Okay. Can you talk into the mic a little more?
R: $\quad$... part of the place that I live near, but we have the state that I live near.
$\mathbf{M}$ : What's the name? What's the name of the state park?
R: [inaudible 00:42:16] State Park.
M: Yeah. I can't, I couldn't hear you.
R: Sorry.
M: Yeah, bring yourself closer to your computer. Yeah.
R: [inaudible 00:42:35].
M: Okay. Okay, now we can hear you better. Go ahead. So what do you like about it or dislike about it?
R: Well, the water's been so low, that reason we haven't been able to go, because the bathrooms won't be open. They can't spin it. They just recently opened it up a couple months ago.
M: Had there been a drought?

## Segment B: Urban 2; July 11, 2022

R: That's what it was from or drained the lake for some reason, I don't know. There's always something going on. There'll be times where they tell you not to swim in the water. Other times they tell you it's fine. So I'm never sure what the [inaudible 00:43:12]
M: Weird.
R: Yeah.
M: Okay. Okay. Well that's fair enough. All right, so I think we're ready for the screen, Steve. All right Steve, are you ready for the screen? He's going to show us some things on the screen. We're going to look at some statements, and these statements are basically attitudinal questions as we call them in market research speak. And the responses I want you to respond with are strongly agree, somewhat agree, neutral, somewhat disagree, strongly disagree. But I want you to tell me why. Why you disagree or agree. So let's start with Ann. Being near or on the water makes me feel happier. How much do you agree?
R: I'd say I strongly agree. I always feel good after I dip in the pool or the quarry or the ocean or wherever.
M: Okay. Melissa?
R: I'd say strongly agree. The nostalgia, I'm always happier near the water.
M: Okay. Caitlin?
R: I would say strongly agree.
$\mathbf{M}: \quad$ And why is that?
R: I just like the water and being in water and I know, I like how you can feel light in the water and there's cool stuff to see in the water.
M: Oh, okay. Elizabeth?
R: I strongly agree.
M: Okay, tell me why.
R: Like I said, it makes me feel energized and powerful. It's helpful for my mental health.
M: Perfect. Okay. And Margo?
R: $\quad$ Strongly agree. Yeah, there's definitely a nostalgic element being in the water. I love that. I feel you're almost unconstrained by just gravity.
M: $\quad$ So free. You're free.
R: In the water, I am Simone Biles and on the land I am a hippopotamus.
M: Right, right. I hear that. Okay. All right, let's continue to the next. All right, so here is the next one. When I am in the parks or on trails near the water, I see other people like me. How much do you agree with that? And I'll start with Ann again. And then tell me why.
R: I don't know. Always find the type of question.
M: So are you neutral?
R: Neutral. Neutral.
M: Okay. So you don't really know? You don't really see people like yourself?
R: It depends on what you mean. With white people, sure. People my age, sure. Other people with autism, probably not.
M: Okay. Okay. I understand. That's a very, very good point. That's a very good point. All right. Melissa, do you see other people like yourself?
R: Yeah, I would say so. I see a wide variety of all kinds of people.
M: Okay. Caitlin? Oh, Caitlin left. Let's go to Elizabeth.
R: Yes and no. I strongly agree and strongly disagree because there's no one else like me, we're all different.
M: True.
R: Not everybody likes the same. They could be liking trails, but you never know. They could be here against their will.
M: Right. That's true. Okay. That's a topic for another focus group. No, but I'm saying some people that are similar to your age, gender, demographic characteristics?
R: Oh yes. There's a lot of people. There's a lot of people who love it.
M: So you see a lot of diversity?
R: Yes. A lot of people. There's so many people you never know who you're going to see next. I've seen an elderly couple in their seventies. Okay?
M: Yeah. In the water having fun.

## Segment B: Urban 2; July 11, 2022

R: $\quad$ No, they were hiking up a mountain with us.
M: Oh wow. All right.
R: $\quad$ That's why I said there is, they're all different. Because I actually got along with that couple and me and my husband and my kids and my family because usually when we go, we all go. They hiked with us, they stayed right along with us. And when we stopped the break, they were keeping going. I was like, okay then.
M: Yeah. That's good. That's good. Okay. Thank you. And Margo?
R: I mean, yeah, I'm a 40 something American-born white female who lives in the United States, so there are people who look like me literally everywhere. I don't think it's really a ...
M: It's not like you feel ... Well, we ask that question is because we want to make sure that people feel welcome where they're going. And so sometimes as women, we may or may not feel welcome or safe.
R: Yeah. I mean no more or less so than any place else, but I keep a Whoopee Cushion in my purse to deal with street harassment.
M: Whoopee Cushion? So you just blow it right back in their face? Okay. Caitlin's back. So Caitlin, how about this statement? When I am in the parks or on trails near the water, I see other people like me. How much do you agree with this statement?
R: I guess somewhat agree, because people are so diverse, I can't assume they have a lot in common with me, but we have to have something in common because we both clearly enjoy being out in nature and think that it benefits us in some way to be out there. So that's at least one similarity, but I don't talk to other people usually, we'll say hi when you pass people, but I don't know anything, I don't presume to know anything else about anybody who's on trails that I'm on.
M: Okay. Okay, good. All right, let's go to the next statement. There is convenient access to the water for boating, fishing, or swimming near where I live. Strongly agree, somewhat, neutral, disagree, somewhat or strongly disagree. Ann?
R: Okay. Swimming sure, but I don't remember if they had boating or fishing at the quarry.
M: Okay. Okay. All right. So nope, not really?
R: I'd say somewhat agree or neutral on it.
M: Okay. Melissa?
R: I guess it depends on how near, you mean like-
M: Let's say within a 30 minutes from your home, 45 within an hour's time from your home.
R: Okay, then I would agree. Yeah, strongly agree.
M: Okay. Caitlin?
R: I would say strongly agree. I mean, having the river there, it's very convenient. Definitely boating and fishing, swimming you can, but ...
M: At your own risk?
R: Yeah.
M: Okay. Elizabeth?
R: Lots. I strongly agree. There is lots of access areas I would call them, right?
M: Yeah. Public access areas, anyone can go if you have a jet ski, if you have a kayak, or if you-
R: Oh yeah.
M: Okay.
R: There's a lot of them around here.
M: Okay, great. And Margo?
R: $\quad$ Not for swimming, for everything else, yes.
M: Okay, so not for swimming. Definitely. Okay. So there's a question from the beyond, and that means, Steve just texted me a question. He says, would you like to have closer water access where you live, Melissa?
R: Yeah, just in that it would take me 45 minutes, half an hour, 45 minutes to get anywhere I need to go. So walking, nowhere that I would be safe enough that I would feel comfortable walking to from my house.
M: Okay. Okay. All right. Let's go to the next part. Okay, so we're going to be now exploring characteristics or features of a public water access site. Now, part of what we want to do today, and by the way, I'm reading this on my screen, I don't have it totally memorized, but I want to get this right so you understand what we want to do in this section. Part of what we want to do and talk about today is making sure that people who want access to the water are able to do that and where they get it. And when they get there, it's a good experience. So be it swimming, be it paddle boating, be it kayaking, be it sitting by the water on a bench, be

## Segment B: Urban 2; July 11, 2022

it picnicking, barbecuing, anything by the water or in the water. So what features, and take a few seconds, what features would make you want to visit a public water access site? What are the things that this place needs to have that would make you want to go again and again and again? And I'll start with Melissa.
R: Good, I'd say bathrooms.
M: Bathrooms.
R: Having grills and picnic area is always a plus, and place you can swim and if they are available to rent, boats, canoes, stuff like that. That would be a big plus.
M: Okay. Caitlin?
R: Clean bathrooms are always a bonus.
M: Do you want the kind of bathrooms that are Porta Potties or do you want legitimate bathrooms with toilet stalls and sinks and showers even?
R: Running water is always best, but to me, as long as it's clean and well maintained. I think that that is nice to have.
M: Okay.
R: I like to know that I'm going to be able to get parking. There's a lot of places around here that the parking lots get crowded very, very quickly if you're not there at 7:00 AM or something like that. So just knowing that there's enough parking is nice. And then a place to sit, a picnic table or some benches or something is always nice as well.
M: Okay, wonderful. And Ann?
R: I say, let's see again, then clean bathrooms. Preferably ones with them that are actually buildings, not just Porta Pots.
M: Right.
R: And also I was thinking multiple access points. You know, could have a parking lot for people who drive there, but you should also have something for people who can walk in. And you should also have maybe a light rail access point.
M: Good point, so public transportation.
R: Yeah.
M: It's accessible by public transportation.
R: Yeah. Yeah.
M: Okay. Anything else?
$\mathbf{R}$ : Let's see. If you're going to have picnic tables, they should have maybe a snack area or even a small restaurant.
M: Okay, wonderful.
R: You get food.
M: Like a cafe or?
R: Yeah, cafe.
M: Okay. Wonderful. All right. Anything else?
R: And of course, let's see, you need the order itself, be it a lake or a swimming pool or query, you know-
M: Right. Okay. All right. Thank you so much. All right, let's go to Margo. And then Elizabeth. Margo, what features do you want to have, would you like to have in a public water access site?
R: I would love to see the availability of swimming, which does not appear to be a thing around here. I fully understand that there are, most of the smaller rivers around here, the Anechoic River and the creeks. Swimming just isn't terribly safe because of the, just because of the amount of pollution. But the Potomac River, for instance, or the lakes in the area. If it's safe enough for stand up paddle boarding, where let's face it, you're probably going to fall in the water, then it's clearly safe enough for swimming and it should be available.
M: Okay.
R: Also, the price point. For instance, to rent the paddle board is something like $\$ 30$ for two hours.
M: Ewww.
R: Lot of money, especially, certainly if you've got a family. So there really, whereas-
M: So the amenities need to be affordable amenities, not to be so stringent so that people, regular everyday people can afford it, rather than more well to do people.

## Segment B: Urban 2; July 11, 2022

R: Yeah. I mean, as a single person, I can afford to pay $\$ 30$ sometimes. I sure as heck, if I were a family of four, there's no way.
M: Right, right. Okay. And Elizabeth?
R: Bathrooms, play area, somewhere where if the kids don't want to play in the water, they can play on a jungle gym. Something to tire them out. Run, play, tire yourselves out.
M: So land activities. Land activities for children, a playground, swing sets, that sort of thing.
R: Yeah. So something other than the water, because some kids don't like water. There's autistic kids who don't like water. Yes, they'll play with sand. But I have a two year old, which you've probably seen her, a few weeks ago. She's autistic. She does not like water like that. She likes sand, she'll play on playground, stuff like that. She does not like water.
M: So that, that'll be very shocking for her if-
R: Yeah.
M: Cause the experience has to be there for everyone, for every child as well as adult. Understood, Understood. Okay. What is a make or break point feature? So you've mentioned a lot of things, but what is the must have, or I'm not going there, point? Ann, let me start with you, what is the make it or break it point? It must have this one thing, or else I'm not going.
R: Clean water.
M: Clean water. Okay. Melissa?
R: If it's too dirty for swimming, I'm not going.
M: Okay, Melissa?
R: Bathrooms, as I learned recently, when couldn't go to the lake when the bathrooms weren't working to enjoy your afternoon. So yeah, bathrooms have to be there.
M: Yeah. That's uncomfortable when you're in your swimsuit and it looks terrible. Either they haven't been cleaned, or they're not available. So very, very good point. Caitlin, what's your make or break feature?
R: I'm going to agree with clean water because if you can't get in the water, what's the point of going?
M: Understood. Okay. Margo?
R: I'm going to say affordability. There's places around here where the rivers where you can't get in the water necessarily, but that are safe for non-contact activities like canoeing and kayaking. And it would be great if they could deal with the pollution, but that's not going to happen overnight.
M: Right, and affordability. When you said that, did you say affordability?
R: Yes.
M: Like making the places that you are able to swim, because the water is clean, to make it affordable for people to go. Right?
R: And same thing for the non-contact-
M: Places as well.
R: For activities to be able to rent a canoe or a kayak or a row boat.
M: Okay. Okay. Elizabeth, what's your make or break?
R: I would have to say easier access. Most of the places around here is unsafe to walk towards the water. So there's mud that you sink down into the minute you step into it, like quick sand.
M: Oh dear.
R: So it's really hard to get down near it, unless you find the concrete area. Which my kids, knowing them, they'd run and break an arm on the concrete. So-
M: Let's say for example, someone that's in a wheelchair wants to go into the water, or at an access point for wheelchair access. So having some areas built out where the cement, or whatever they use, would take you down the water. Where A, someone with a wheelchair can make it in there. And then number two, you're not sinking into the mud like quick sand.
R: They would still have to maintain the concrete too, because some of the concrete around here is slippery. If somebody with a wheelchair went down in it, they wouldn't get back up easy. They literally have to have somebody with good gripping shoes or something help them out.
M: Right, so make sure that that concrete is-
R: Maintained.
M: Kind of not so slick. Right, okay. All right, let's go to the next slide then. We're going to see some images of, and these images are just, I want you to just kind of see which one you picture yourself in. And I'm going to

## Segment B: Urban 2; July 11, 2022

show you a couple of slides on this. So Margo, l'll go with you first. A, B, C, D. Where do you see yourself kind of participating in or visiting or just relaxing in?
R: $\quad$ Not D.
M: Okay. Why not D?
R: That's way too people-y.
M: Okay. I love that term way too People-y. Too many people. Okay. So let's eliminate D from your list. Which is the one that you like better? The best?
R: I would say that C looks like it's probably the most friendly for swimming. A looks, just with the weeds growing out of the water, looks like it kind of may be a little marshy and getting your feet tangled up-
M: Okay. So we eliminate A, we eliminate B. What about B?
R: $\quad$ That also, it looks like it's more geared toward boating. I would say I would not eliminate A or B, but if I had to choose, I'd probably lean towards C. But B would have its advantages too.
M: Okay. Awesome. All right. Caitlin?
R: I'd say A or B.
M: $\quad$ Tell me why.
R: $\quad$ They just look like the water's really accessible and there's places to sit, and put your food or drinks or whatever. And they're not crowded.
M: $\quad$ Not too people-y.
R: Yeah.
M: Okay. Okay. Elizabeth?
R: A or C? A? I would mainly go for, because it's not too different from where I originally grew up, I'm originally from South Carolina, and where I used to swim as alligators. So this ain't as half as bad.
M: Assuming this is an alligator free zone. You know, this is all alligator free water. Which one would you pick A then?
R: Yeah, A, it looks pretty decent, but C. C it looks decent too, but it doesn't look like it has a good access point. So I would still go with A, because you can walk down that grassy area-
M: Okay-
R: And it wouldn't be too hard for somebody in a wheelchair to just sit, if they didn't want to get in the water, to sit out there.
M: Right, right. Okay. Wonderful. Melissa?
R: I'm going to go with A, because that looks pretty typical of the places that we do go.
M: Okay. Okay. And Anne?
R: Let's see, definitely not D, too crowded. And let's see, B would be good if I were going boating and A, I'd say $A$ or $C$ for swimming.
M: $\quad$ Okay, so between $A$ and $C$ ?
R: Yeah. For swimming? Yes.
M: Okay. Okay.
R: And B would be for any kind of boating activity because it has that appeal.
M: Yeah, has that appeal. Okay, let's go to the next slide. Okay, here's E, F, G, and H.
R: Hmm.
M: Which one? Now lets go backwards now. Ann, I'm going to start with you then Melissa, then go on forward. Which one would you choose? Out of these four images, where do you see yourself participating, or having a relaxing time at? Near the water or on the water?
R: Okay. Let's see, l've never been fly fishing. So they can rule out F.
M: Okay. Take out F.
R: $\quad$ As for the others, well $G$ has the nicest landscape.
M: Okay.
R: $\quad$ And these are all boating, and they are all for boating areas.
M: Okay. Yeah. Well if that's what you, if yes.
R: Yeah. G would be the only one l'd pick for swimming but-
$\mathbf{M}$ : Or doing whatever you like to do near the water?

## Segment B: Urban 2; July 11, 2022

R: Yeah.
M: Or on the water. Okay, so G. Okay. Melissa?
R: I'd say G is the, yeah, G.
M: Okay. But, well, why did you choose G?
R: Well, it's the most appealing one, I guess. Out of all the ones that I see, the landscape, I agree with the landscape looking nice there.
M: Okay. And not so people-y.
R: Yeah.
M: Okay. I love that term. I'm sorry, I'm hijacking that term. Caitlin?
R: I would go with G because it looks the cleanest, even though it's near that marina area. The E and F both look kind of dirty, and H looks really cold.
M: H looks like they're kind of like chilly, right?
R: Yeah.
R: Yeah.
M: $\quad$ So $E$ and $F$ have murky water?
R: Yeah.
M: Yeah. Brackish water, I think it's described as. Okay, Elizabeth?
R: So typically I would choose E, but because that's what I'm used to, that's boating areas for me. I swam off them and boat off of them. But $G$ is also another salt springs. They have that little area for people to hang out in and camp. And that's almost like that except what doesn't have a marina. So G, or E for me.
M: Okay, perfect. All right, and Margo?
R: I'm actually, I'm looking past the, looking past the foreground in H. It actually looked like beyond that, might be some decent swimming areas.
M: In the horizon, on the other side where there's trees and whatnot.
R: I mean, there's a shot of what looks like some young people getting off a boat, which, but-
M: Looks like a field trip.
R: Yeah, and I'm way past the age of participating in field trips, but-
M: Right.
R: Looking beyond that, it actually looks like it might be the best location for swimming. And maybe for some other activity. The water also looks fairly open, but not too open.
M: Okay, so if we were to choose the first set of photographs that you saw to the second set of photographs you saw, which would you prefer? The first one or the second one? First one or the second one? Come on, people talk to me.
R: First one-
M: First one. So put your finger up if you the like a number one or a number two. Okay. So how many ones do I have? I have one, two, three, four, and five. We have unanimous vote for the first set of photographs.
R: Pretty in fairness though, all of set one looks like, with one exception, looks like they were taken on really nice sunny days. And looks like the second set, the weather just wasn't nearly as photogenic.
M: Pretty, photogenic, right? Okay. Okay, great. All right-
R: H looks cold.
M: H looks cold. Yeah. Okay. All right. So let's go to then, things that would encourage you or discourage you from going to a public access water site. I already know you don't want a place that's too people-y. Some people, but not too crowded. Okay. What would be too crowded? Is it if you set up your little chair or whatever your gear is, how close should people be? What do we think is too close? Caitlin, what do you think is too close? A few people or no people? What do you feel comfortable with?
R: I mean, it really kind of depends on the situation. As long as I can have some space between me and my group and other groups, if it's a crowded beach, it's probably always going to be like that when the weather's good. So as long as people aren't sitting on top of our stuff or close enough to get sand on my stuff or things like that, it's fine. And as far as space, as long as there's, like, to me, parking is an issue. It's too crowded if there's no parking spots. So as long as there's parking available, I think you can find adequate space to put yourself.
M: Okay. So we also have presence of parking, which you mentioned the presence of trash cans and or recycling bins. Someone being there to give you help, like a park ranger. Water safety and comfort, things

## Segment B: Urban 2; July 11, 2022

like the availability of life jackets or how to boat or boating safety tips. And then as mentioned before, the availability of rental or borrowed equipment like kayaks, canoes, fishing poles, et cetera. I heard low cost, does free appeal to anyone?
R: Oh yeah.
M: I'm guessing it does, right?
R: Free does, frees appeal, but you'd have to think how would you pay the people they got, people in charge of maintaining it.
M: What else are you charging me for? If this is free. Okay, let's explore. So we heard, okay, so a site being totally free of people or with some people, as long as that they're not in my personal space, for the first bullet. Are we all in agreement, or is there anything else to add? Anything else to add anyone? Anyone?
R: I would personally prefer some people, I don't know that I would necessarily feel all that safe being the only person there.
M: Good point.
R: But yeah, I mean, just thinking of a typical recreational site, maybe if there were maybe five other people or parties there, that might be a reasonable might an ideal ish number.
M: Yeah, sometimes, I mean, obviously as women, we all know there's safety in numbers. So you want to see some people, but not, you don't want to be the only person, loan person there, right?
R: Yeah, no-
M: Do we agree with that group?
R: Yes.
R: Yeah.
M: All right then, let's talk about the presence of parking, access to transit lines or bike paths. I think Anne was the one, or someone said that easy access, that there's a high speed rail close by where you can just-
R: A bike rail, yeah.
M: You were the one that said that Ann. So tell me about, Caitlin's point was if the parking's crowded, I'm not going. That means it's already too full. Tell me about the access to transit lines and or bike paths, Ann.
R: I would say that you can't expect everybody to depend on cars, because not everybody has a car.
M: Right.
R: And you may have people who live in the area who prefer to walk there, or bike there. So you should have something for, for cyclist, including a bike path and a place to put their bikes.
M: Okay-
R: And you should also, and if you've got a bus line or a light rail, there should be something for them too.
M: Okay. Okay. So how about a shuttle bus from the rail to the location, on busy season when the weather's good?
R: Yeah. Yeah.
M: $\quad$ Not too cold, you know, when it starts getting warm. Okay.
R: Yeah, through May through October if you're live in [inaudible 01:16:20]
M: Okay, great, great. All right, anyone else want to add to that? To Ann's comments, Elizabeth? Anyone?
R: I totally agree with the shuttle bus idea building, light rail access to existing parks, is again, that's something that's not going to happen overnight. It's going to be really expensive and maybe not worth the money to service one area. But in this area, to have a shuttle bus from the nearest metro rail station would be great. And bike path also for accessibility, but also why not have bike rentals?
M: Bike rentals, good point. Okay.
R: I was looking at another, of something y'all were saying for parking access. So for the handicap, I say they have the parking a little ways away from where you go, a shuttle bus or a little for access for people with accessibilities.
M: Yeah.
R: $\quad$ That would be helpful too.
M: Yeah. Especially like seniors-
R: A little more help, because they have park rangers, and they got officers there, they have people that clean up, that walk through. They have people with vehicles that ride through down where people are at, where hang out. So maybe access, having it better for people who have that handicap.

## Segment B: Urban 2; July 11, 2022

M: Okay. So you actually went to point number four, someone being there to give you help. A park ranger, but it also does tie into the access to transit and accessibility from parking or from wherever you're coming to the location. Okay, good-
R: I also thought of something else.
M: Yes. Tell me.
R: EV chargers, electric vehicle chargers.
M: Good point. Okay, so that-
R: Electric vehicles are becoming more common and so there should be chargers for them.
M: Good, good, good, good point. Excellent. Go ahead.
R: Another thing I thought about with that, you know what, I'll save this one for the other, point four. Maybe that'll be point four. Just yeah, let me save that.
M: Okay, we're going to do three and then I'll make sure to go back to you, Elizabeth, on that.
R: Okay.
M: Okay, the presence of trash cans and or recycling bins. Do you go to places like outdoor, public access, water sites where the trash can or the recycling bin is overflowing?
$\mathbf{R}$ : All the time?
M: How annoying is that? Tell me.
R: Very.
R: It's one thing if you have a car and you can reasonably transport things, you know-
M: Back home.
R: Keep a plastic bag in your car, it's not the end of the world.
M: Right.
R: That's not really all that functional.
M: So you have to have those trash cans or recycling bins emptied on a regular basis.
R: Yes, often enough to functional.
M: And also close by, not have one every half mile or something like that, right?
R: $\quad$ At least have them near the picnic table if you have picnic tables.
M: Okay, good point. Good point. Okay-
R: I would take frequently emptied over quantity if I had to.
M: Okay. So frequently emptied is higher on your scale than quantity of available trash or recycling bins. Okay. All right. Now let's go to Elizabeth, Someone being there to give you help, like a park ranger. What was your point?
R: $\quad$ So some walking trails that I've been to, I have never really seen this near a water access area, but they have these call help plate things that-
M: Right.
R: If you need help, somebody could press this button, and they'll send out, if you're a little farther away, they'll send out the help to come and help you. Or emergency services, I would think that would be encouraged to put out-
M: Like an alert system?
R: Yes. Like where I'm from in South Carolina, they have the Congaree River. We have access points in the trails that if you need emergency services, you press a button and they send out our army rangers with their ATVs or something. Or not army rangers-
M: Park rangers.
R: Yeah, park rangers with their emergency vehicles to come out and help you and assist you and get you back. So emergency vehicle, emergency EMT can take over.
M: Right? So make sure that we have proper personnel to help in an emergency or just, Hey, I got lost. Where do I go next? Right?
R: Oh yeah.
M: Okay. Okay. Number five. Point number five is water safety and comfort. Things like availability of life jackets, how to boat or boating safety tips. How do we feel about this one?
R: Definitely have that and you should definitely have a lifeguard.

## Segment B: Urban 2; July 11, 2022

M: Lifeguard. Good point.
R: I mean, any public swimming pool or public swimming area needs a lifeguard.
M: Okay. So we need life jackets, of course. These things that we can rent and I guess water safety and comfort and availability of rental or borrowed equipment, kind of go hand in hand. So one thing that I do want to ask, and Margo said it, make things affordable, like the kayaks, make it affordable to rent or bikes, affordable cost, right?
R: Yes.
R: Life jackets. Why not make it? Cause it's such a basic, you do not want somebody who is not a strong swimmer going without a life jacket of cost.
M: So life jackets for should be free of cost?
R: $\quad$ Or refundable to the club owners. [inaudible 01:22:56]
M: Okay, how much should the deposit be? \$10, five dollars, \$20 what?
R: $\quad \$ 10$ refundable deposit.
M: Say that again, Melissa.
R: $\quad \$ 10$ refundable deposit maybe.
M: Okay, $\$ 10$, that's the refundable deposit. Okay, great. Okay. Out of all these issues, and I'm going to go with Caitlin first, what are the make or breaks if a public access water site does not have this? I'm not going, from this list.
R: To me, the only thing that would discourage me is the presence of parking. If there's literally nowhere to park, then where am I going to put my car?
M: What's the point?
R: Get there and it's probably going to be crowded anyway.
M: Understood. Okay.
R: Everything else is kind of like bonus stuff to me, when I go somewhere. I expect that I should be bringing out my trash with me. So it's nice if there's trash cans and recycling bins, but a lot of people don't even use them correctly anyway. So what's the point of having the two separate ones? I always try to just take my stuff back with me. If I'm at the ocean, lifeguard is great, but if I'm going to a park ranger at the front is fine. I don't need somebody to be at every station. I assume that it would be a safe area if they're allowing me to go there. And then, all the other stuff, l'd be worried about maintenance of those things. It costs a lot of money to keep up with kayaks and canoes, especially when you're just letting random people use them. Even life jackets, unless you have this deposit system, there's almost no guarantee they're going to get put back, so that's just more money. That all just seems like a hassle. But that wouldn't make or break if I go somewhere or not. The big thing to me would be, do I have a spot to even put my car?
M: Right. Understood. Melissa, what's your make or break?
R: Yeah, just bathrooms are so my make break.
M: Bathrooms, they're not listed. Bathrooms aren't listed. So bathroom is your make or break again. Ann?
R: $\quad$ Transportation is my make or break. I either have to do to park my car or if I have to be able to use public transportation of some kind.
M: Elizabeth and then Margo.
R: Cleanliness.
M: Cleanliness.
R: It has to be a clean area. The water, I can understand there's fish, fish pee and poop in the water. Hopefully a human wouldn't do that, but you never know. There are people out there that do it. But cleanliness of the land area. If there's trash-
M: So no litter, but no polluted, littered area, that it'd be pristine, let's say.
R: $\quad$ Yeah. And as long as it's picked up. There's going to be trash, there's people that don't pick up after themselves. But I'm talking about garbage everywhere, like you're leaving it on the ground and it's not clean that area.
M: I understand.
R: I have kids. My kids will randomly walk up and pick up something and say, "Oh mommy, look at this and stick it in their mouth."
M: Yeah, that's not good. That's not good. So I agree. And Margo.
R: Go get me a diaper.

## Segment B: Urban 2; July 11, 2022

R: I guess accessibility is going to be the starting point. If I can't get there, then it doesn't matter.
M: Understood. And let's go then to our next section. Oh no, I think this is our last part where we're presenting. Oh no, we have some statements. Did Awesome. All right. Let's go to two more statements. So this is kind of an internal attitude, an attitude about helping to keep... I want to do more to help make local creeks, rivers, and lakes healthier. How much do you agree with that for yourself? I don't want to hear, "Oh, that person, this person." I want to know about what you personally, yourself as a human being, as an individual, how do you see yourself? Do you see yourself wanting to do more or not? And that's okay too, if you can't or don't want to. Melissa.
R: I actually do. They have these events with the geocaching called cash in trash. Cash in stands for geocaching. So cash in and trash out. You go to an area, everybody get supply, and brings trash bags. You go in, and there'll be like a meet up where you can trade different collectables that people do while also cleaning up the area while you're there.
M: So yes, you definitely strongly agree. Caitlin
R: I say strongly agree because I think it's important for the planet and its attributes to be healthy and clean. It's just hard sometimes to do more, because I as an individual can only do so much. I can't force our government to change their policies about what's allowed to be dumped in our water or not. I can do little things, but it's hard to put the big things in motion.
M: Yeah. Because you're just one person. But at least this way if we get a lot of little things together, it's one big thing. Ann?
R: Yeah, I strongly agree.
M: $\quad$ Tell me why.
R: Yeah, because we drink water, we need to eat, so we need to keep it clean. And we also need to protect it for the animals that live in or near it.
M: $\quad$ Right. Great. Who did I miss? Elizabeth. Oh, Elizabeth, you have your baby on your shoulder and-
R: Oh, I'm good. I can speak.
M: How much do you agree with this?
R: I strongly agree. See, we have a thing around here that we they have the merry go round space. So if my kids want to get on it, they go pick up a piece trash and they throw away. And whenever we leave places, we make sure we take our trash with us.
M: And Margo?
R: I strongly agree, and it just occurred me, it would be great in my area if there were kind of a citizens brigade that participated in water testing of the local creeks and whatnot.
M: Oh good. So get volunteers to also not just pick up trash, but also test water.
R: And there are times when-
M: Or collect water.
R: More and more-
M: For it's testing.
R: $\quad$ To even just let your dog play in the water.
M: Like a doggy water park or doggy water area.
R: Just in terms of bacteria levels. For instance, after storm, it's probably not safe at all. If there hasn't been a ton of rain, maybe it's [inaudible 01:31:11].
M: Yeah. Test out those areas so that it safe for people and for also your pet children.
R: $\quad$ So that people can make some informed decisions.
M: Awesome. All right, let's continue. All right. So some of the things that we just saw have to do with personal stewardship. And what are some things that you can personally do right now to help the water where you live and the lands nearby, cleaner and healthier? Anyone can start. All right, Melissa, I'm going to pick you again to start off. What can you be doing to help the water and the lands be cleaner and healthier?
R: I like that of being part of a community group that would make that a priority. Even, which is getting to make [inaudible 01:32:20]. "Hey," some of my friends to meet up and want to go and clean in there [inaudible 01:32:24].
M: What if there was no organization that allowed you to make your own group and be part of theirs? Have you done stuff like that before?
R: Other than geocaching, they do that once or twice a year, but I don't know of any groups, but I'm interested.
M: Anyone else?

## Segment B: Urban 2; July 11, 2022

R: We have a community thing they do around here too, where they commence on Facebook, they do a community trash pickup near the river sometimes.
M: Oh, good. So they do have stuff going on. That's wonderful. All right. Margo?
R: One thing that I do, I don't have a dog, but if I go out for a walk, I usually will keep just doggie poop bag in my pocket. And if I come across a pile, then I will try to scoop it, because that's a major source of bacterial runoff when it rains and all goes downhill and right to the creek.
M: Agree, agree. So, wow, you are awesome for doing that. Thank you.
R: I'm a vet pack, picking up poop is literally just a fact of life.
M: Wow. So you deal with the pet poop all day.
R: It doesn't even face me anymore.
M: Thank you so much for your service. Ann, how about you? What are the things that you could be doing or that you're doing currently in your little space in the world to help water and land be cleaner and healthier?
R: I have sometimes participated with organizations like Blue Water Baltimore to help with trash pickup. Haven't done that in a while ago, but I have done it.
M: And Caitlin?
R: Same thing, the trash pickup, participating in and helping organize, helping to advocate for stricter restrictions on pollution in the water and trying to help figure out ways to clean the water once it's dirty, and advocate for those policies as well.
M: Awesome. Some of those things could be convenient or inconvenient, like, "Oh man, I have to recycle this," or whatever. Some people say, "Oh, I can't put fertilizer in my garden because it's going to run off and pollute the water." Some people see that as an inconvenience. Some people see that as like, "Hey, I don't mind using organic fertilizer or dog poop or pet poop to fertilize my garden or whatever. Instead of it having run off," or compost, that sort of thing. So how motivated do you really feel to do those things? On a level from one to five, hold up your fingers. Five fingers is very motivated. Four is sort of motivated. The middle one is neutral. So just do it horizontal and then two and one. So five. Ann, neutral. Margo is a four. Elizabeth's a four. Melissa's a four. All right. Give me a neutral. Give me my neutral. Why Ann?
R: $\quad$ Sometimes I feel discouraged like it doesn't really matter what a group of people would do.
$\mathbf{M}$ : $\quad$ So you're saying the problem is too big for this little group to even try to solve?
R: Yeah. And then there are times when I feel like I'm being lazy.
M: All right. So there is a theory that's going around in certain healthy earth or healthy water groups, that bringing people in contact with nature, especially water, natural water, makes people care more about the natural environment. So if you expose people to the element, the water, land, or land near water, that will inspire someone, or people in general, to care more. How true is that? Do you believe that? How believable is that?
R: $\quad$ That may true, particularly with young people. I've read-
M: So the younger you've exposed children, young people, teenagers, to clean water, clean, pristine lands, and that sort of natural environment, they would care more for it as an adult?
R: Probably.
M: Melissa, how believable is that?
R: Probably [inaudible 01:37:34].
M: What'd you say?
R: I feel like me being out in [inaudible 01:37:41].
M: So probably true?
R: $\quad$ There being a lot of campaigns was in elementary school about cleaning up [inaudible 01:37:49]. I remember the commercials where you cut the [inaudible 01:37:53].
M: Right, the box tops.
R: I still remember all that stuff. No, [inaudible 01:38:00]. so the turtles don't get caught in them, stuff like that.
M: Oh, right, right. The six packs. Yes.
R: $\quad$ Yeah. Stuff like that has always stuck out in my mind.
M: Right. Margo, how believable is that theory of bringing people in contact with nature and especially the water makes them care more about the environment?

## Segment B: Urban 2; July 11, 2022

R: I think it's an element of common sense that if something's great in front of you, you're going to care more about it than if it's more abstract. But I would say at the very least, I can't [inaudible 01:38:36] possibly do any harm.
M: Elizabeth?
R: I believe it's true. My children, I introduced my oldest-
M: Hey, hi.
R: I introduced her to water a little bit after she was born. And she's the biggest outside, outdoorsy baby ever. As she sees trash, she runs and picks it up and puts it in the trash.
M: What about for you or in general, adults?
R: I was put in the outdoors a lot. So whenever I see trash, I pick it up. Which my husband thinks is most disgusting, but I keep gloves. Sorry.
M: So let's say your husband, has he been exposed to the natural environment his whole life?
R: Yes. He's a southern boy, so he was raised outdoors. He just is a germophobe. I have no clue why, but he's the biggest germophobe. But anything else, he's fine.
M: So he's okay with keeping areas clean, he's just not picking up someone else's trash?
R: Yes.
M: I get it. And Caitlin, how believable is this theory?
R: It probably has some aspect of truth to it, but I think it also has to go hand in hand with education about the environment, because I still see adults all the time throwing trash on the ground when they're out on hiking trails. But if you are educated as to why that's not good and why you're not supposed to do it, you're more likely to stop behaving that way. So I think it's multifaceted.
M: So an educational component must take place in order to let people know, "Hey, you can't throw that protein bar wrapper on the floor, that could choke a bear," or whatever the case is, or "Go into the water supply." Awesome. All right. Well, we're going to wrap up, and this is the last roundup that we're doing, the little roundup questions. We've talked about a lot of things, and I know this may seem like a repetitive question, but thinking now of all the things that we've talked about, I want to ask the question again. But now I want you to talk about your ideal, most awesome, amazing place, the ideal public water access site. One that you can imagine located close enough to your home that you could go there easily and interact with the water in some way, whether it's sitting by the water, dunking your feet, maybe doing paddle boating, maybe even swimming. So I'm going to start with Ann, what does it look like? What are the features? Give me your beautiful wish list.
R: Honestly, it needs to be used for swimming, because that's what I'm-
M: Ease of use for swimming, so clean shallow areas.
R: Clean shallow areas. But there should be a deep area so that people could dive in it.
M: So like a diving platform somewhere?
R: Yeah.
M: A little bit more beyond.
R: And if you're going to put it outside, it should be with an area around port of it, trees.
M: $\quad$ So trees, nature.
R: Yeah.
M: I already know about parking. I already know we need more parking. I already know we need to have bathrooms. So what else?
R: Let's see, you may want picnic tables with a cafe nearby so people can get snacks.
M: So picnic tables, a small cafe. Anyone else want to add to Ann's ideal place? Melissa? Oh, oh, Elizabeth. Elizabeth? Yes.
R: Oh, she can go if you want. You called on her.
M: No, go ahead. What were you saying, Elizabeth? And then I'll go to Melissa.
R: Play site for kids.
M: Playground for kids.
R: We said shade, plenty of shade.
M: So shady area. So canopy of trees, therefore you can have shady areas. So a balance of sun and shade.
R: Yeah. Or a little beach area, for people-
$\mathbf{M}$ : Umbrella, like a beach umbrella rental, if there isn't. Yeah. Melissa?

## Segment B: Urban 2; July 11, 2022

R: I always like having areas to sit down and eat. There's grills available you can bring [inaudible 01:43:41].
M: So you said picnic areas?
R: Yeah, like [inaudible 01:43:48].
M: Gazebos?
R: Yeah.
M: I don't know if they're called pagodas, but they're like pavilions. Yeah. Like picnic pavilions, that sort of thing. Margot, what would you add to this list?
R: I think definitely what everybody else said. I would add making sure that it's accessible for those with physical disabilities.
M: So physical disabilities that people seniors who are slow walkers or have mobility issues, has to have of good, great wheelchair access.
R: Especially given how much activities that involve water are things that people with physical disabilities often can participate in on the same terms as those without disability.
M: So have a wheelchair accessible area for people who have mobility issues and would like to go into the water there. And I believe in our last group yesterday, someone said that they actually have wheelchairs that can go on sand. You can rent them or use them for free. So if you're with a person who is a wheelchair user, you can have them go into the wheel... I don't know how it is, but I'm curious to see it, that the wheelchair can kind of glide through the sand.
R: And then beyond that, I would imagine that you don't even lot of people-
M: Rails, handrails kind of sort thing.
R: But I don't know how you do this with a natural pool, but I remember at the Mac they used to have a gadget that could lower you into the swimming pool, it could bring people into the swimming pool.
M: So they could lower people into the swimming pool or natural public access area, water area, safely. Caitlin, what do we add to this?
R: $\quad$ So the things I can think of is, I know some people have mentioned a kid friendly area. I don't have kids and I don't really like to be around them. So an adults only area would also be nice. And then the other thing I could think of, l've been to some places where they have a reservation system and you don't pay anything, but you still reserve a day or a time slot. And I think that would help alleviate the parking problem because then only people who have reservations can go. Or they have, everybody makes a reservation, but day of, there's a certain amount of reservation still in the morning and then there's just a limit on how many people can go and it doesn't become a crowded cluster.
M: Yeah, agree. So I have one more question from the beyond. It's from Steve. Would you travel to a beautiful remote site that's two hours away from your home with all the amenities that we listed? I mean, absolutely everything that we talked about. We're talking public water access site, a public access water site rather. Or would you rather have a site that's close to your home, like five minute walk, 10 minute walk, 15 minute drive, that's close to you, but it has half of the things? Yes or no? Yes, raise your hand.
R: Well, I would do either one depending on how much time I had.
M: $\quad$ Yes to both. Ann?
R: Yeah, I say yes to both. And of course it depends on the half that's missing. Yeah.
M: Right. Melissa?
R: I would be happy with more places closer to me that have half the amendment amenities. That would be fine with me.
M: Margo?
R: I would choose some place that's closer and good enough.
M: And Elizabeth.
R: $\quad$ Closer would be good.
M: $\quad$ Yeah. So average is good to go if it's close.
R: Yeah.
M: It doesn't have all the beautiful bells and whistles, but at least it's a bell. Has a bell. All right. Well we are done, ladies. So thank you so very much. At the end of this group, you will be receiving a $\$ 100 \mathrm{gift}$ certificate. Yay. Yay, Yay. What you say?
R: Just in time for Prime Day.
M: There you go. I know I put Jeff Bezos in space. Don't even talk to me about Amazon. I put him in space with all the shopping l've done during the pandemic.

Segment B: Urban 2; July 11, 2022
R: Yeah, but you didn't get him stay there.
M: I didn't say it, but you did. So Elizabeth, you are the early bird winner. So you get 150, everyone else gets 100. I want everyone to give yourselves a round of applause. Yay. You did it. You did a wonderful job. Thank you so much. And I hope to see you again in another focus group soon.
R: For sure.
M: Bye bye. Take care. Happy summer. Enjoy the outdoors. Take care. Bye-bye.
[END]

## Segment C: Suburban 1; July 10, 2022

Moderator: Okay, that's our cue. That it's recording. This is a no judgment zone. We want the good, the bad, the ugly. You will not hurt my feelings if you have something to say or if you think like, "Well, should I say that?" I want you to say it, please. It's important for us to learn everyone's perspective and everyone's opinion. On the inverse side, if I'm not hearing enough from you, let's say, David, you're not saying a lot. You're kind of listening more than talking. I'm going to call you out. Please, it's not because I want to make fun of you or bully. No, nothing like that. It's because it's important for me and for Steve to hear from everyone. Don't feel like I'm picking on any on you if you're not saying so much. It's that I really need to get everyone's opinion. Everyone's opinion is important.
Respondent: I have to shut me up.
M: Oh, okay. Yeah. Sometimes I have to do that when things we have to move on. I have a list of questions on this side of my screen here. Well, it's a second screen. I sometimes look over here to kind of make sure that I'm on pace, and I have to keep the group going because it is a two hour discussion. Sometimes we go over the mark, especially on a particular topic. I'll be like, "Okay guys, we have to move on." That will happen. I hope I don't have to do that too much. Anyways, so we all give each other a turn. Speak one at a time and don't be shy in telling me things that are the truth. With that, do you have any questions before we begin? Anyone, Everyone. Any questions? David?
R: Nope.
M: Any questions, Bill?
R: No, ma'am.
M: Any questions, Carole?
R: I'm ready.
M: You're ready? I like to hear that. All right. We're going to start with a brief introduction, and these are the prompts. Where do you live? Who do live with? Give me an idea of your typical day. What's on your mind? What are the things that are kind of concerning you? Then on the other side of that question is, what gives you joy, hope, and satisfaction? We'll start with our early bird winner today, Carole. Carole, after you go, then you pick the next person.
R: I live in Selbyville, Delaware, 10 miles from Ocean City, Maryland, which is a tourist area. What brings me... I live with husband. You've been happily married for 52 years.
M: Congratulations.
R: Thank you. Thank you. What brings me joy is family, cooking, beach time, traveling pre Covid. Yeah. My day since I'm, we're both retired, I'm an early bird, so I get up early and I have my breakfast. I have my coffee. I'm lucky enough that we have an exercise room in our house. Five days a week I exercise, I have an elliptical, I have weights, and it's important for my bones and my wellbeing. After I do that, I shower and then I get on with the day. It's a great life.
M: It's a good life. What are things that are on your mind? Things that are kind of, I mean, it could be personal, it could be public. Just general issues that kind of stay in the back of your mind, maybe worry you a bit.
R: Cost of living.
M: Oh yeah.
R: Yeah. Here we are retired, tourist area, still Covid. Would love to get on a plane and travel, but I'm immune compromised, so we have to be careful. Inflation is a big thing. Groceries.
M: Gas.
R: Gas. We filled up the car, it was $\$ 65$, which is a lot of money for us. I hope things get a little better, and the whole political thing is a worry. We should just respect and get along with everyone.
M: Okay. We're very well said. Okay, Carole, who goes next?
R: I'm going to say Bill.
M: Hey Bill, and then of course David will close us out. Hi Bill.
R: Hi, I'm Bill. I live in Hummelstown, Pennsylvania. I have lived in, I've actually had 33 different addresses in my life and obviously moved around a lot.
M: Were you military?
R: $\quad$ No, I was with General Electric Company.
M: Oh, well that makes sense you. Yeah, yeah.
R: They sent me from place to place and did some horrible things to people. I made... Every place I went, I had to close it and people have people lose their job. That, let me tell you, is a very, very hard thing to do. Especially in one location, I was working with third generation people in that facility and that was super hard. Other than that, as I say, I'm in Hummelstown and I live with my wife of 53, almost 54 years.

## Segment C: Suburban 1; July 10, 2022

## M: Congratulations.

R: Also, with [inaudible 00:06:16] sharing a split level house, where she has her portion we have done, we've been living with them in various places for the last [inaudible 00:06:36]. Simply because my daughter was going to college and she graduated. She got her doctorate in forensic psychology.
M: Congratulations.
R: She needed help with the little ones.
M: Of course.
R: Thank you.
M: Okay. We had that, and we have three other children and they all live in Indiana. I've got [inaudible 00:07:13]. Did I hear 12 grandchildren, Bill?
R: My wife has serious problems, so we don't get out very much. Yeah, all together. Yes.
M: Okay. Yeah, you were breaking up a little bit.
R : Are you still there?
M: Yes, hello, Bill?
R: Yeah.
M: Your connection was breaking up a little in between while you were speaking, so yeah. I'm sorry, but we did catch most of it.
R: Okay.
M: I'm assuming that your worry would be making sure that your wife is healthy, and that she's gets all the medical help that she needs.
R: That's right.
M: Then what's something that gives you joy? I'm assuming the grandchildren of course, but anything else that gives you joy and happiness? Satisfaction?
R: Being outdoors, looking at the sky at night, listening to the wind and the trees. That's my joy.
M: Oh, okay. Awesome. All right, thank you so much, Bill and David. Hi David.
R: Hello. Try to go by what I remember, information you wanted. If I missed anything, just tell me.
M: I'll cue you. I'll cue you up.
R: Okay.
M: Okay. So where do you live?
R: Fredericksburg, Virginia. I live by myself. Some things will bring me joy are woodworking, watching movies. There was something else that I can't remember, I like taking pictures. What else was there?
M: Okay, so give me an idea of your typical day.
R: Oh, okay. There's no typical day. I don't have transportation. On the weekdays I take a local buss that's now free, you used to have to pay for it. I get most of my groceries delivered, but I still go out to store sometimes. I used to go out a lot more, but since the pandemic, I want to say I realize I changed. I used to go out to eat restaurants. Now the only, I like to get fast food only because I cook so much more than I did before. Yeah, economy is ridiculous. It affects everybody. The gas indirectly affects me. What I mean by that is since I don't have a car and drive, it doesn't affect me at the pump, but it's still, the groceries go up because everything has to be shipped by vehicle. That includes the food prices and restaurant prices and everything.
M: So that's a worry, I'm assuming?
R: Oh yeah.
M: That's a big worry. I mean, I kind of hear the same kind of worries. Of course, health and the cost of inflation are two big things that are on your mind. What things, other than the woodworking, are you able to spend time outdoors or at least where near where you live?
R: Yes. I mean, I live in a subdivision and see my neighbors all time go out and walk around just to get in the sun. One of the things I have depression, and for depression it's really good to get out in the sun. It gives you vitamin D.
M: That's right.
R: Which helps your...
M: Your bones, your bones and also your... Well you said your mental health.
R: Mental condition. Yes.

## Segment C: Suburban 1; July 10, 2022

M: Yeah, yeah. Okay. Well thank you so very much everyone for giving me a little snapshot of your life. I'm going to segue to something that I asked David, and I'm going to ask the rest of you. Bill mentioned it too, is how much time do you spend outdoors and what activities do you like to do if and when you are outdoors?
R: Who first?
M: Anyone. David, how about you? How about you? You go first.
R: All right. It'll be pretty quick because since the pandemic, I have to make myself go outside. I am on the computer way too much, not wasting my time, but between email...
M: I'm guilty of that too, David.
R: Surveys... I mean it's the information super highway. There's nothing you can't do anymore. I have to get up every now and then to let my chair reinflate. You don't have to ask me for the truth, I give to you.
M: $\quad$ That's right, go ahead. I like that.
R: If both of those have to reinflate, I outside, I just look around. I just see anything that needs to be done in the yard, things like that. I do enjoy it, but I don't like the extreme heat or the extreme cold.
M: $\quad$ Right. You like a Goldilocks zone, just right.
$\mathbf{R}$ : Or the three bears.
M: Yeah.
R: But no, I love nature. I look at pictures all the time. One thing I take pictures of is the trees when they change color, flowers that are growing, animals. Anything.
M: Okay. Thank you so much. All right, Bill and then Carole.
R: Okay.
M: Much time do you spend outdoors, if at all?
R: Well, let's see. I have to go outdoors several times a day to take the dogs out. Therefore I get out and I sit on the patio and soak up the sun, listen to the birds. It's also, I do the mowing around the house. That's always fun. Other than that, in the evening, or not the evening, but nighttime, l'll sit outside for probably half hour, 45 minutes and just chill.
M: Awesome.
R: To me, that is wonderful.
M: Okay, and Carole? Thank you so much, Bill. Carole?
R: I don't like the extreme hot and we have a lot of humidity. I enjoy sitting on our front porch. We like to sit there in the evening and have a glass of wine, when the mosquitoes don't bite at me. Depending on what the weather is, it's beach time. We have to get up early so we can head to the state park, because we have the traffic problems and all the tourists.
M: Okay, so what's the park? Well you said Ocean...
R: State Park. There's a state park, there's a state park, Fenwick Island State Park. We're very close to that. We're close to Assateague, and that's a wonderful place to go to see the wild ponies. We've enjoyed taking the grandchildren there, and it's good to be out in nature. It's good to feel the sun. I just can't stand the extreme. With the humidity here, it's kind of bad.
M: Some summer days are just too much for you. I understand that. Okay. How about any water? I know that in Delaware you mentioned Ocean, Ocean, was it Ocean Park?
R: Ocean City.
M: Ocean City, right. Maryland. Do you do any visiting there in Ocean City? Go to the beach to have a swim?
R: Well, we go to...
$\mathbf{M}: \quad$ To or wading or just getting your feet wet?
R: We go to the state park in Fenwick.
M: Okay, and what's there?
R: The beach. The beach.
M: Which is it like fresh? Oh, the Atlantic Ocean. The total Atlantic Ocean coast, not fresh water.
$\mathbf{R}$ : Yes, and it's very nice. It's a nice place for families to go to. We like it better than Ocean City. We have a lifetime state park pass. It saves us money and we enjoy going there and just relaxing. We love to watch the dolphins and sometimes they really put on a nice show. I love to collect seashells.
M: Oh, lovely. Oh lovely. I collect seashells too. Yeah, I love that. David, any bodies of water near you?
R: $\quad$ Not close enough, and especially not without transportation.

## Segment C: Suburban 1; July 10, 2022

M: I don't mean a pool, I mean natural bodies of water. Tell me the closest one to you, that you visited.
R: Well, it was Colonial Beach, but that was back when I lived out there in Colonial Beach. Right now that's the closest, and that's about half hour, 45 minutes. Like I said, without transportation... I love the fish, but I can't even go fishing locally.
M: $\quad$ Are there any local creeks, rivers, ponds, lakes that you can visit?
R: There are, but again, with the transportation, only a few miles is too far if it doesn't go on the bus route.
M: It's difficult.
R: Yes.
M: Okay. Bill?
R: We live close to the Susquehanna River and I've lived close to that in several locations. All the way from upstate New York, all the way down to Baltimore and the Chesapeake Bay. Therefore, we have a close relationship with [inaudible 00:17:41]. Of course, a lot of activities that they have along the river there.
M: Which ones?
R: Baseball... The activities?
$\mathbf{M}$ : Yes. Can you list some of them?
R: Well, for one thing they have a baseball team, minor league baseball team that plays on an island here in middle of the river. They have events where you have, well things like when it's 4th of July and holidays and that sort of thing. They have special events and they get a whole lot of vendors coming in, and people just gather down there and just have a good time.
M: Lovely. How far is it from where you live?
R: $\quad$ The river itself is approximately two and a half miles.
M: Okay. That's not bad. Okay. All right.
R: It's not very far.
$\mathbf{M}$ : $\quad$ All of these sites are public access sites, am I understanding?
R: Yes.
M: Members of the general public can just go?
R: Absolutely.
M: David, the places near where you live, are they also public access? Just anyone can go?
R: Yes.
M: Assuming you have transportation.
R: Yes.
M: Assuming you have transportation. Okay. Carole, that the state park where you visit, is that also like any member of the public, they don't have to have a special permit to go?
R: You have to pay to go in.
M: Well, yeah.
R: Anyone can go, and also with Ocean City, Maryland, you can find a place to park and go on the beach there. Anyone at all can go.
M: Okay. All right. Let's take it back a second here, and I want you to think kind of emotionally. What makes you want to be near the water?
R: It's calming.
M: Calming?
R: Yeah.
M: Okay. David?
R: Therapeutic.
M: $\quad$ Therapeutic.
R: I'm drawn to water, which makes it even more upsetting that I can't get there conveniently.
M: Okay. Bill, what makes you want to be near the water?
R: Again, I have to agree with calming. It really, really sets you free. It lets you know that there is a whole lot of nature going on. It shows you what, for example, we're big problems with the environment these days. It shows you what can happen when we have these unusual storms and what have you. It's educational.

## Segment C: Suburban 1; July 10, 2022

M: I heard calming, therapeutic, it makes you feel free, but there's also a learning component. It's kind of like a thermometer for how things are going on in nature.
R: Yes, yes.
M: Okay. It makes you say like, okay, everything is going fine, but it also immediately warns of if there's a problem, like you said.
R: Right.
M: The recurring, very strong storms that maybe didn't happen when you were growing up. Okay, understood. Has there been a time in your life when you became more active outside and near the water than you were before? Think back to when you were a kid or young adult, or maybe even just a few years ago. Did anybody go fishing or any of the relatives go fishing, or friends?
R: I used to fish with my best friend, oh, probably three nights a week in the Susquehanna River. It was so much fun. We enjoyed it. We were out there half the night, as a matter of fact, just pulling in Catfish left and right. It was very much fun. In addition to that, I went to Ranger school up in the Adirondacks and New York State Ranger School. It was on the lake there, Cranberry Lake, and we got to do boating and fishing and all sorts of things on the lake. It was a lot of fun.
M: Oh wonderful. Carole, what about you and your family?
R: My husband would fish with my former boss, and that was very relaxing for him. When the grandchildren could come and visit, because we're three hours away. When they were small, they would come lots of times in the summer, and we would go to Assateague and we would get in the ocean with them. Also the state park in Fenwick, and just watching them in the water was just so much fun. With the waves crashing and splashing everybody, it's really enjoyable. They've grown up too fast. We have great memories of that, taking them to the beach, packing the lunch, staying all day, lathering them full of suntan lotion. Just good, good times.
M: Wonderful. Thank you, and David?
R: I'm sorry, I forgot the question.
M: Any fishing, any water activities, boating, even paddle boats or rowing or canoeing or kayaking, any of that your past...
R: $\quad$ Yes. I used to go fishing with my dad when I was younger and with other friends, as I got older. We did go boating on that local body of water that I was telling you about, that was accessible. He'd rent a boat, or he had one. I think you just had to have a fishing license. Done that, I've always, as a kid and as an adult, played around ponds, streams and all that. I like all kinds of aquatic animals, the frogs, tadpoles, fish, anything that would be around that area.
M: So you were just soaking all that nature in?
R: Oh, yeah. Whenever you have a problem, or you need to think, you take a little walk, you go down to some water, and like I said, soothing, calming-
M: Therapeutic.
R: Yes.
M: Like you said.
R: Yes.
M: Wonderful. Okay. So what changes happened? Are you going out less often? I know, David, with the transportation issue, that's a change. Is it because you're older now? Is it because your family's grown up and out of the house? I mean, are we engaging in those same activities? What changed? Carole?
R: Covid.
M: Covid?
R: Covid, and the tourists down here. We would go to the beach, and we would go early, maybe get there about 9:00, and we would leave about noon. We were courteous, we tried not to infringe on other people when we were at the beach, but by the time we were ready to leave, there was just people all around us.
M: It was too crowded. Yucky.
R: Yeah, too crowded. That's why we would like to go early. I don't want to go to the beach when the weather's too cool. I don't want to sit there in a sweater, because to me that's silly. We always try to look at the temperatures, and then get up early and get on the road before the tourists come out, because it's truly relaxing just to sit there. Just to sit there with your feet in the sand and look at the ocean, it's wonderful. I'm very fortunate that we can do that because we're just 10 miles away.
M: Right, right. Okay, Bill, what's changed? Bill?
R: I'm sorry. What?

## Segment C: Suburban 1; July 10, 2022

M: No, Bill, like you were talking about fishing when you were with your best friend, just had more time in the water, with the water. What things have changed for you?
R: Well, there's a whole lot more water that l've been around other than the river. Having lived in Hollywood, Florida, we were right there in the [inaudible 00:27:33].
M: Atlantic.
R: Beach right there. Living in Washington, we were right there in Puget Sound. We just enjoyed it. In the summer times, we would go to Ocean City, and we would rent a place in Virginia Beach and things like that. It was just always a lot of fun to do all that.
M: So now you're not doing that as much? Are you still keeping up with that kind of activity?
R: $\quad$ No. No, actually, we're not doing that at all now.
M: Okay. Is it because you're older?
R: We're pretty sedentary.
M: Okay. Yeah. Yeah. Okay. All right. Well, we're going to go to the next subject. This is going to be... We're going to show you something on the screen. Steve, I think we're ready. We're going to show you some things on the screen, and these are statements. Can everyone see the screen?
R: Yes.
M: Okay, awesome. All right. So the statement will appear on the top, and then your answer choices will appear on the bottom. Then I want you to tell me why you chose what you did. Okay? So I'm going to start, I'll read out loud, and then we'll discuss our answer choices. So being near or on the water makes me feel happier. Strongly agree, somewhat agree, neutral, somewhat disagree, or strongly disagree. l'll start with Carole. First. Let's hear your answer choice, Carole, and why.
R: Strongly agree. It's just something peaceful about the water. We've been very fortunate to take some lovely trips. When we were in Aruba, it was amazing. When we were in Alaska, that was also amazing. Water, just something about it. It just makes you feel good. You look out and you see fish, you see people enjoying themselves, it's just a happy, happy time.
M: Okay. Bill, and then David.
R: I cannot say it any better than what Carole just said. I strongly agree.
M: Okay.
R: It just, it sets you free.
M: It sets you free. I hear that a lot when you say that. You've been saying it. Okay, so a trend there. David?
R: Strongly agree. Love anything water-associated. I forgot to mention earlier that I also love aquariums.
M: Oh, aquariums. So you visit the aquariums, what's the closest one to you?
R: I think Baltimore Inner Harbor.
M: Okay.
R: I've been there about three times.
M: Okay. So strongly agree with this statement?
R: Yes.
M: Okay. So three strong... Oh, go ahead.
R: I also think that that's one of the things that makes yard and tabletop fountains so popular.
M: Oh, yeah.
R: If you don't go to the water, you can have it in your yard or on your tabletop.
M: $\quad$ Right, right. So you could bring the water to you.
R: Yes.
M: Okay. Especially in the summer.
R: Yeah.
M: Okay. Let's go to the next statement. When I am in the parks or on trails near the water, I see other people like me. So think of yourself, who you are as a person, and can you identify with the other people that are also enjoying this? I mean, your demographic, your age, your gender, that sort of thing. Are you seeing other Bills and Davids and Caroles as you're there, or do you feel out of place?
R: Well, if I speak, where we are living now, we're close to the Appalachian Trail. We go there occasionally, and we do meet other people there. It's a, what do you call it? You have like interests and you click with the people.

## Segment C: Suburban 1; July 10, 2022

M: So how much do you agree with this statement?
R: Oh, I strongly agree.
M: Okay. Okay. That's awesome. Okay, David?
R: I am neutral, and the reason is obviously we share an interest and a like, but the way I'm not included is I'm alone, don't have a family, not married. Most of the people are there with someone. Occasionally I'm with a friend, but in that way I'm very different. They have a group with them, a family, something like that. I don't have family. So in that way I'm different.
M: Okay. So neutral for you. Thank you. And Carole?
R: I strongly agree, especially in the fall after the tourists leave, because then it's all the people that are retired. We all have the same things in common. We don't have to go to work, we're not looking at the clock, we're just laying back, relaxing, doing whatever we want. So yeah, I strongly agree with that.
M: $\quad$ So when those pesky tourists are gone, the locals have fun.
R: Exactly.
M: Okay. Okay, great. All right, wonderful. We're going to be looking at public water access sites next. Part of what we want to talk about today is making sure that the people who want to access the water are able to do that. Oh, there's another one. Oh, I'm sorry Steve, I forgot. There's another statement. There is convenient access to the water for boating, fishing, or swimming near where I live. Strongly agree, somewhat agree, neutral, somewhat disagree, Strongly disagree. Let's start with David, then Carole, and then to close out, Bill. David?
R: For me, neutral. Most people strongly agree. Just because of my transportation situation. Other than that, it's like two and a half miles, three and a half miles down the road.
M: But that could be far for someone who doesn't have transportation.
R: Right.
M: Because the public transit, like you said earlier, doesn't pass through some of those places. Is that right?
R: Yes. Okay.
M: Carole?
R: I strongly agree. The Atlantic Ocean is almost in my back door.
M: Oh, wonderful. Okay. And Bill?
R: I am going to have to go neutral on this, simply because I have not done any boating, fishing, or swimming other than in a pool in quite some time.
M: Okay. I have a question from the beyond, and this means that Steve is asking me this question. David, if you had someone to go with, let's say maybe there was a group that would-
R: Absolutely.
M: You'd sign up? We'll have other single people that don't have family or don't have accompanying members, either family or friends to go with, and you could sign up for a group. Would you do that and would you get out more often?
R: Yes, I have done it. There's a travel... I mean, not with water... I mean, I have taken trips and cruises and things of that nature.
M: But let's say to your local place that's two, three miles down.
R: Yeah.
M: You would do that. All right.
R: If I can go overseas and a cruise, why can't I go locally? Yeah.
M: Okay. Awesome. All right, let's go to then to the next section, the one that I jumped. Features of a public water access site. Okay. So now we're going to be looking at making sure that the people who want to access the water are able to do that, and when they get there, they have a good experience. I've heard some of the things that you guys have talked about, what makes it special for you. So I want to list them and I want you to think about it. So you could type them in the chat and then we can read them out loud if you have the opportunity to do that. Bill, I'm going to start with you. Since you're on your phone, you can't really type too much. What features would make you want to visit a public water access site? I'm talking about physical characteristics, like facilities or amenities there, or maybe that it's just uncrowded like Carole likes it.
R: Actually, I like it both ways. I like it crowded because I'm a good people watcher, and I like it quiet so that I can just enjoy the water itself.
M: So enough space for everybody to kind of enjoy, but also quiet enough where you can have your me time.
R: Yeah.

## Segment C: Suburban 1; July 10, 2022

M: Okay. All right. Carole, what physical characteristics, amenities, facilities, in those water places that you like to visit ideally?
R: Easy access.
M: What does that mean? What does that mean?
R: Good parking.
M: Okay.
R: Safety.
M: Safety, like park rangers, security, making sure that everyone is safe, monitoring controls?
R: Yes. No alcohol because that's never good around water.
M: Yes.
R: Places to throw your trash so you're not going to litter.
M: Right.
R: Easy access to get into the water. Restrooms are always a plus, but once again, someone has to maintain that.
M: Right.
R: Maybe a snack shack, you could go for some drinks. Maybe you could rent an umbrella or if you don't have chairs, you could do that. I think that would be it.
M: Okay, wonderful. Thank you. David, what are your ideal... Okay, public transportation, I know that's on top of your list.
R: Well, that wouldn't be for most people, that's a small fraction. From what I remember, when my dad and I used to go to run, they used to have a little shack, for lack of a better word. Along with the trash receptacles and either porta-potties or bathrooms, some kind of facilities like that, because you can probably be there for hours in that shack. Not to the extent of a convenience store, but have a little bit of everything related to water. I mean, not only water, but food, snacks, drinks, and then anything water-related. Maybe some fishing items, hats for people that forget theirs, or they're going to be out in the sun and they're not bald, they just have a three-inch-wide part. Dad always used to tell me he's not bald, he just has a four or five-inch-wide part. Anyway, things like that. Things that you might forget that you might need on the water.
M: Sunscreen.
R: Yes. Bait.
M: Bait. Okay.
R: Small tackle. Boat rentals. Things like that, just convenience for the water that you might forget somewhere else.
M: Or that you don't have. Imagine you transporting a boat or a small paddle boat. I mean, a kayak even. Not everybody owns a kayak, but maybe I can rent one, so I could just take some lessons. If I'm more experienced, obviously, then I would just rent it and that's it. Okay, great.
R: Small Styrofoam coolers, ice.
M: Good, good, good points. Okay, we're going to see some pictures, and I want you to pick out the photo that you like the most, and then I want you to discuss why. So which is the place that you see yourself kind of attending, fitting in, returning, making it like, "Oh, this is my spot, this is my water location that I like to go to repeatedly." You can shout out your letter, and then tell me where. I'm going to start with Carole, then Bill, and then David again.
R: A.
M: $\quad$ A, tell me why.
R: It's secluded. There's a table with benches. It is right on the water. Looks like I could slip down there and put my feet in or the rest of my body. There's a tree, we could have a picnic underneath the tree. It looks calming and relaxing.
M: Oh, lovely. Those are great words. Thank you so much. Is there anything you would change in that picture? In that A?
R: $\quad$ No, it's simple. I like simple.
M: $\quad$ Natural, undisturbed peaceful.
R: It's not cluttered. Yes,.
M: Not cluttered, not crowded. Perfect. Okay. Bill, which of these pictures do you see yourself in?
R: Both A and C.

## Segment C: Suburban 1; July 10, 2022

M: Okay, tell me.
R: I have been actually in two places that are almost exactly like this. For A, on the Puget Sound, there's an annual salmon bake, and this setting is virtually the same. The only thing you can't see in the picture is the... God, I can't even remember what it's called. The bridge.
M: Oh, right.
R: $\quad$ The bridge that collapsed back in ' 36 or so.
M: $\quad$ The drawbridge.
R: No. I'm sorry, I can't say.
M: Well, let's just call it a bridge. You can't see it.
$\mathbf{R}$ : It's a bridge. In C, again, this is a picture which is almost exactly like... My memory is getting so terrible.
M: $\quad$ That's okay. If you remember it, just shout it out.
R: It's a town in Washington that's right on the sound, and it has a setting exactly like this, where you're looking out across the sound.
M: Okay. So how did-
R: You can sit there and watch boats come and go. The ocean liners, container boats, and what have you going by.
M: What do these two pictures make you feel?
R: Remorseful.
M: Why?
R: I miss that area so much. I really connected to the northwest. Really did. I just feel bad that I'm not there.
M: Okay. So is there anywhere-
R: These pictures make me think...
M: Is there anywhere in the Susquehanna... I'm imagining there are some places that may look like this that you could feel yourself going to. Are there?
R: No.
M: No. Okay.
R: $\quad$ Not at all.
M: Okay. All right. Well, thank you so much. David, which photo or photos do you see yourself attending?
R: C.
M: $\quad$ Talk to me about $C$. How does it make you feel?
R: Beautiful area you got, I like architecture also, and it's a beautiful building back there that is just nice scenery no matter what's inside.
M: Okay.
R: $\quad$ Then you got the peer, which you can fish off of, and it just looks beautiful.
M: Okay. Awesome. Thank you. All right, let's look at some more. Now E, F, G, and H. Carole?
R: I'm going to go $G$, with the people on the bridge. It looks like the... I can't tell,.
M: Is it G with kind of the rocks in front, or are you talking about H , which is kind of like they're getting off a boat?
R: Yeah, everybody's picture's covering the $H$. So it's $H$.
M: Okay. So it looks like a group are disembarking from a small boat or ship, like a motor boat. I guess they were taking a tour of some kind.
R: $\quad$ Yes, I'm all up for that kind of stuff. I love to go to new places, learn new things, and if you're in the water on a nice boat... Yeah, that would be just a fun. fun Day. We've done that many times on many different vacations.
M: Okay, awesome. Okay, David and then Bill, which one do you see yourself doing?
R: I like E and G in this one. E reminds me of when I was younger, my dad used to back up whatever vehicle he had at the time, back the smaller boat into the water. G just looks like a nice place to walk around and enjoy the scenery.
M: Okay, wonderful. And Bill?
R: I would say would G, mainly because it's very much like places I've been. It just reminds me of being able to fish where I wanted to, and to have other people around. It just reminds me of places I love to be.

## Segment C: Suburban 1; July 10, 2022

M: Okay, awesome. All right, let's go to the next set. Okay, here are the statements. So these are factors that would encourage or discourage you. So we want to know the importance, I want you to pick your top threes. So I already know Carole wants to be in a site being totally free of people. What is too crowded? What is too isolated? Of course, she mentioned parking and access to transit lines or bike path. I feel Carole and David in this statement, the presence of trash cans and/or recycling bins. Someone being there to give you help, like a park ranger. Water safety and comfort, things like the availability of life jackets, how to boat or boating safety tips. Availability of rental or borrowed equipment like kayaks, canoes, fishing poles, et cetera. Are there other issues that would encourage or discourage you? If you guys can give me some of those... I know you said some of the ones, you've mentioned the things that you'd like to see earlier, some of them are on this list, but what else isn't on the list? What else would you like to see? David?
R: I'd like to see all of them. I think they're all important. Some [inaudible 00:49:33] Some I didn't think of, but it would be nice to have. I'm never conceited enough where I think I know everything about the water.
M: Right. What would discourage you from visiting a public access waterway? What would be a discouraging factor?
R: Way too crowded.
M: Okay.
R: What I consider way too crowded, where it's hard to pick a spot that you're not in someone else's space where you're worried about person to the left and the person to the right, and especially if they're already there and you're there, you're in the way.
M: Right. Okay, Bill?
R: Well, I would say based on the number of different places that I have been at water, the presence of parking and access to [inaudible 00:50:37] would be good. Obviously, the presence of trash cans are recycling bins and those are primarily the things that I would like there. They would encourage me to go to it.
M: What would discourage you?
R: Well, that's what I'm trying to come up with.
M: Okay.
R: Okay. A location that is not cared for. It's got junk all over it. The landscape is totally just-
M: Litter, a lot of litter. Is that what you mean?
R: A lot of litter. Yes. That bothers the heck out of me.
M: Okay. Okay. And then, so imagining now not places that you've been to before. You and your wife, let's say, you want to spend some time in the outdoors. What kind of place would your wife and you like to go to now? Because she has health problems, considering that, are there any handicap access points that you're thinking about, easier access because of a disability or just older age?
R: We have joined the Hershey Community Center, which has got a tremendous, large complex with indoor pool, outdoor pool, tennis courts. Oh, you name it, they've got it there, and as I said, we just joined that and we have gone and we will be going more to this location and you can sit and you can relax either in the shade or in the sun.
M: What about a natural body of water? What are the things-
R: No.
M: $\quad$ Nope, won't do it?
R: $\quad$ Not for her.
M: $\quad$ Not for her. Because of her condition. Okay.
R: $\quad$ That plus her fear of water.
M: So she needs more facilities that are catered to people like her.
R: Yes.
M: Okay, I understand. And Carole, what are the things... And of course you see the list, you mentioned a lot of these earlier. What's not on the list that would either encourage you or discourage you?
R: $\quad$ Something I forgot to mention at the state parks, which we love, especially when we were taking the kids when they were little, the bathhouse. I could take the girls in there, I could shower them off, they could put on clean clothes. There were the restrooms. That is crucial, crucial. Now at our state park in Fenwick, they roll out this big sidewalk facility. It's fabric, but they have it tacked down to the sand, and they also have a very big, I want to call it a wheelchair, but it's made for the sand, and if you have someone that's disabled, you can put them in that wheelchair and you can get help and you can wheel them right down to the water.
M: Oh, that's lovely.

## Segment C: Suburban 1; July 10, 2022

R: It is lovely. And having the lifeguards there is just so important because they're educating everyone about the riptides, which are really bad this season, so everything that's on the screen plus the bath houses.
M: Okay, so private, running water.
R: Absolutely.
M: For either before or after being in the natural water, and then of course the wheelchair access to the sand to beach. Wonderful. Okay. All right. Let's go to the next section. And we're going to see some new statements. So these are new statements. Here it is. "I want to do more to help make local creeks, rivers, and lakes healthier." How much do we agree, strongly agree, somewhat agree, neutral, somewhat disagree or strongly disagree? Carole, I'll start with you.
R: Strongly agree. We have to recycle. We can't litter and we have to be careful what we're putting down in the sinks and what we're flushing.
M: What should we not put down in the sinks and flushing?
R: Oils, grease. Yeah, because eventually it all goes to the bay and that harms the fish and everything in there. You need the proper things for the right ecosystem.
M: Okay. And David. Thank you, Carole. David.
R: $\quad$ Normally I would strongly agree, but I put somewhat agree. I would volunteer, but what bothers me about it is that we need to make some laws and be able to report people while we're cleaning up that they're littering because what's the point of going out there if they're just going to replace it?
M: Some kind of committee neighborhood watch kind of thing for littering.
R: Right.
M: Okay.
R: There's no sense going out there and cleaning up and then you come back the next week and there's more than when you first started.
M: Right. I agree. So there's some punitive action for litterers.
R: Yeah, but I wouldn't mind volunteering to do that.
M: Okay. Okay. All right. And Bill?
R: Well, I strongly agree and one thing that hasn't been brought up is the fact of the way people dispose of unused drugs.
M: Oh.
R: Medications that is not a flushable or wash down the sink type situation for any kind of medication, and that is causing a lot of problems because it gets to the waste water treatment plants and it just creates havoc. But yeah, I wish I could do more outside to help make the creeks, rivers, and lakes healthier, but unfortunately can't do that.
M: Yeah. Yeah. Okay. All right. So let's go to the next section. We're talking about personal stewardship now. Oh no, that's right. We got the next statement. I don't know what's wrong with me and these statements today. I keep skipping over them. Okay. "My actions contribute to water pollution where I live." So Bill, you were talking about flushing down unused medications. You're conscious of that action, so you don't do it. Is there anything that, let's say for example, that you or your family may be doing that could contribute to water pollution? How much responsibility does each person have in terms of keeping the water clean? Do you strongly agree, somewhat, neutral somewhat, or disagree strongly?
$\mathbf{R}$ : We are very conscious of this sort of thing, but one of the reasons being is that my son-in-law works for the state with the Department of Environmental Protection, and so he is very much into-
M: So he's educating everybody in the family?
R: Yes, he is. So we have a good source there, resource.
M: Okay. David?
R: I don't know. Bill mentioned, I never heard of... But I never even thought of disposing pills that way. I don't usually have to dispose of pills, but if I did I would just throw them in the trash and maybe just as bad, I don't know. But l'd never consider put flushing them or something like that. As far as anything else, not to my knowledge, but like I said, I hadn't heard of flushing pills down the sink, so I'm not aware of any. I may be, but not that I know of.
M: Right, I got it. Okay. Thank you. And Carole?
R: $\quad$ Strongly agree. My husband keeps a beautiful lawn and he uses organic fertilizer. He does not want to put harsh chemicals down on the grass because eventually we're going to be drinking it.
M: That's right. That is correct.

## Segment C: Suburban 1; July 10, 2022

R: So everyone can think about what they're putting down on their lawn. That's really important.
M: That fertilizer then goes into our water system and... Yeah. Yeah. Okay. Great. Okay, now we can go to the next section. We're talking about personal stewardship and what are some things that you can do in your personal life to help make water and the lands near where you live cleaner and healthier? Anybody can start.
R: $\quad$ Not littering.
M: $\quad$ Not littering. That's a good one.
R: $\quad$ That was going to be my answer.
M: Okay. Any others?
R: Dispose of your disposables where they should be disposed of.
M: Okay. For example?
R: Separating your trash into the recyclable plastics, the glass. And one of the things that bothers me is the fact that, for example, our local waste people will only accept some recyclable plastic but not all. They'll accept one and two and not the others and there are so many food products that come with...
M: $\quad$ The different levels of plastic.
R: Five and seven numbered plastic, and that just bothers the heck out of me. And we separate our trash.
M: So accept. So expand recycling into accepting these other plastics and or material.
R: Absolutely.
M: $\quad$ Not limited, but expanded so that we're disposing of the trash in a more efficient manner where it doesn't contribute to pollution.
R: Right, and environmentally safe. Yes.
M: I got it.
R: Exactly.
M: Okay. Any other thoughts?
R: Composting.
M: Oh, that's a good one. Tell me how.
R: We do it. We do it.
M: Okay, so you composting your extra food that's not used, like peels of fruit or vegetables. You put them in-
R: Coffee grounds, yes.
M: Coffee grounds. Okay, good. So increased composting behavior in the family or the household.
R: Yes.
M: Okay. Any others?
R: I want to reiterate what Bill said. It kind of got me aggravated. We're going through a big thing with trash companies right now. One company bought out three different ones and now trash service sucks, but we have the separate bin for trash and recycle and they don't want plastic bags in there. It messes up the conveyor belt. Well, you're a recycling company. Fix your damn conveyor belts. I think the two thing things that are worst are plastic bags and straws and you're not accepting one of the major things?
M: Yeah.
R: They've heard from me.
M: Yeah, sure.
$\mathbf{R}$ : Can I say something?
M: Yes.
R: The plastic bags. Go back to the grocery store-
$\mathbf{R}$ : Do they accept them?
R: Where they get recycled.
M: Yes.
R: Oh, absolutely. They have bins-
R: I didn't know that.
R: By the doors. They have bins by the doors that you collect your plastic bags, put them in one of the plastic bags. It becomes a ball. And you have containers near the entrance to almost every grocery store where you can deposit those for recycling.

## Segment C: Suburban 1; July 10, 2022

R: I didn't know that. Thank you.
M: So this is a good point. This is a great point. Do you know all the things?
R: No.
M: $\quad$ That can be done. Obviously-
R: I proved it.
M: Okay, so do you want to know?
R: Yeah.
M: Okay. So aside from, let's say, word of mouth, how else are you learning about what do and what not to do?
R: Either internet or talking to friends.
M: Like we just did now.
R: Yes.
M: Okay. So would you like something, let's say, sent to your home or how do I get this information to you, David?
R: Doesn't matter. Emails, website address, mailed to the house, it really doesn't matter.
M: So for tips on how to lessen the impact of water pollution, here's your list. This is what you can do from the plastic bag recycling at your grocery store to composting, all this information in a concise way whether it's email, newsletter, direct mail piece sent into your home, you're okay with it?
R: Yeah. It depends on the information and how convenient it is. So I'm not going out of my way, I'm not paying more for it. But I deep fry and I used to pour old grease down the drain and I didn't have any plumbing problems, but I heard it was bad, didn't want any, and I'm like, now I store it in the old container and let it go to the trash, so trash people take care of it.
M: Okay. Right. Well that's good.
R: And composting I've heard of that. I don't understand it, but my feelings, and I could be completely wrong, is that you've got all this stuff that smells like rotting trash and that's why I've never looked into it. It just sounds disgusting.
M: Right. Well Carole, maybe later... Well I think how it works is, and Carole can correct me, is that you collect all of these items in a barrel where critters can't get in it and you also add certain enzymes or special soil to get it started, and I believe earthworms in this special barrel because earthworms ultimately break down those things and then it turns into soil.
R: Oh, okay.
$R$ : Yes, yes.
M : Is that right?
R: It's not stinky. My husband and our neighbor do it behind our neighbor's house, a little place in the woods. And we put all of our grass clippings back there.
M: Like leaf, grass clippings as well, right?
R: Yes, and the soil is just so fertile. Now this year we did two raised beds and my husband went across the street with a cart and he brought all of the composted earth back. We've had the best crop this year of zucchini. You just would not believe all the zucchini, and then in the raised beds, there's an area in the middle where we can put our tomato peelings and my coffee and things of that nature. It's not smelly. We don't put food or anything down there. We don't put any grease or anything like that, but it just enriches the soil. It's a very good thing.
M: It's a natural fertilizer.
R: Exactly. Exactly.
M: If you're interested in gardening and stuff like that, so I appreciate you sharing that, Carole. Okay, so where am I here? Some of these things though, seem inconvenient. Has anybody ever heard of a rain barrel?
R: Yes.
M: You can attach to your home. Does anyone have one?
R: No.
R: No.
M: Okay, so the rain barrel, you can attach it to your gutter system and instead of it just like going to that tube that goes on the side of your railing and then it just goes either down the street or in your yard down into the storm drain system. This barrel collects this water. So [inaudible 01:09:06] from the sky for your roof into this

## Segment C: Suburban 1; July 10, 2022

rain barrel, and you can use that to water your lawn or to water your vegetables, Carole's zucchini. Anyone heard of that idea?
R: I've heard of it. I didn't know what you use the water for. How do you get pressure for a hose?
M: My understanding is that you can attach it on the bottom and then there's an attachment that comes with it or you can build it yourself if you're handy enough, but I believe you can buy the ones at any home repair store like that with an attachment. Oh, Steve says it's gravity, so you put the barrel on a pedestal and then there's a hose attachment on the bottom so that water pressure just gives it the pressure to pour out of the hose.
R: I'll look into that.
R: [inaudible 01:10:02].
M: Bill, what did you say?
R: I thoroughly agree that it is a very good thing to do. I haven't done it. Well, I watch a lot of TV shows that show things like that that can be very, very efficient especially if you live in the country and not in a development or something like that. Although if you're in a development, you can certainly use it for gardening and that sort of thing or for watering your indoor plants or for watering your animals.
M: Oh, that too. Giving them that bath that sometimes they need. Carole, do you have a rain barrel?
R: No, we have an irrigation system.
M: Okay, okay.
R: But I have heard of them.
M: Sometimes you can attach the irrigation system and connect the rain barrel to that I've heard. Not that I know. Anyways, so is there an inconvenience to making some of these changes in your lifestyle or in your home? What are some of the things that stand in the way of people living a lifestyle that reduces water pollution?
R: Money.
R: We have to think of the future. We have to think of the next generations coming up. There's climate change. We don't want to do any more harm. We need to protect the environment and recycle as much as we can, and it's truly important. We have solar panels so we feel like we're giving back. It's great to reduce your footprint.
M: David, you said money gets in the way of living a lifestyle that reduces water pollution, so what is the financial impact that you see getting in the way?
R: Everything costs more. Organic is in the name, it's more. Green is in the name, it's more. I even checked in the solar panels because I heard things about where they actually pay you to do it, and I called a solar company and I wasn't eligible so I don't know if that's something they do. They didn't say it was ineligible because of the price or anything else. It was the amount of sun I get.
M: Oh, it's the amount of sun that you get in... Okay, I understand. The cost factor gets in the way because things that are healthier tend to be more expensive. Isn't that weird?
R: Yeah.
M: Yeah. And Bill-
R: Anything for good is more expensive and I'm not willing to do that.
M: Right. Because you have to think of your budget. You have to live within your means. Bill any... Oh, go ahead. No, go ahead.
R: I was going to say sky rocketing prices let me pay as much as I possibly can and I don't want to.
M: Right. Yeah.
R: Even if I had the money, I don't think I'd want to.
M: And Bill, any thoughts on this topic?
R: Yeah. For one thing, on the money situation, yeah, some people have so much money they don't give a darn. "Just get rid of it. I don't care how you get rid of it. Get rid of it." And they just don't care, and that obviously is the wrong mindset. And that's the other thing is people have to listen and pay attention to what the professionals are telling us about the environment and what we can do.
M: Okay. There are some people, let's say individuals, maybe nonprofit organizations that are rallying around the idea that bringing people in contact with nature and especially water, natural water, not a pool, but natural aerial water, it makes them care more about the natural environment. So, the more access people have to public water spaces, the more they care about the environment, particularly water and want and would want to do more to protect it. Other people or other organizations think that just spending more time

## Segment C: Suburban 1; July 10, 2022

out there in nature or near the water doesn't translate into caring more. So where do you stand on that, on those two kind of schools of thought? Carole.
R: I think if you can get people to the water... I mean, they don't have to go in the water. They can look at the water. They can see how pristine it should be and really want to care, want to preserve it for future generations. And just seeing the water just brings a smile to my face. So I would hope the more people that would have some kind of access, it's a good thing physically and mentally.
M: Okay. Bill, what school of thought are you in?
R: There are different views of different waters. The people who live near the ocean, along the shores, they see all sorts of crap that should not be. They are the people that are, to the best of my knowledge, they are more conscious, and they do pick up. A lot of people do pick up debris that they should not be there. As far as the natural waters go, the lakes and the reverse, the ponds, very few people that I know of have any strong feelings about protecting those waters. They don't care what they throw in it. If you're on a boat, and you're having a can of beer, throw the can overboard.
M: Yeah.
R: No. That's baloney. And it's...
M: So, you're saying that there's some people, you just can't change them.
R: That's very true. Some people you can't, but the more education that is put out there, and...
M: Yeah, like what does that one can of beer do?
R: It can kill some eggs and larva or and small critters that should not be killed. Okay. And there are so many... There are a lot of websites out there that people can look at if they would to find out... If they would, in order take care of things better and make the future for the future generations better than what it looks like now.
M: Okay. Thank you so much, Bill. David, you were saying something?
R: I just was saying I compare it to stealing. I saw one time...
M: In what way?
R: I saw one time where a little kid was stealing something, and the store was telling him. He says, It's only 10 cents. They said, Do you realize that every kid that live by every store sold something worth 10 cents, and it's not always the bottom tier. Sometimes it's a couple dollars. How much it hurts them. Well, you think you're the only one. Do you think you're the only one stealing? And it adds up to...
M: So, how does that relate to the water?
R: The one beer can that you're putting in, how many others are doing that? How many are throwing a six pack, a 12 pack, a case?
M: Okay. So you are stealing from nature when you pollute or...
R: Yeah.
M: You're stealing from nature. Okay.
R: And if you were the only one in the world, then yeah, you're the only one doing it, but you're not.
M: Understand.
R: It gets me upset because I don't litter. I used to when I was younger. I saw everybody else throwing out the window of a car, and I was in there, and I did that. I stopped. I didn't like the way the roadway looked, and I get pissed when something doesn't look good that's nature and know that I stopped 20, 30 years ago, and it looks like that.
M: Okay. Good point. Thank you. Can any of you think about a time when you learned something new about the environment that changed your mind, like David. David, did... You know. I mean, it sounds like you had...
R: The last hour in this interview. I mean, let's be honest, I learned about two things.
M: Okay. So, you did learn it just today. Carole, anything? Can you think of a time that you didn't know something about the environment that now you know, and it changed your mind about how you approach things. You know, what you do or how you do it?
R: I didn't realize I could dispose of my batteries at Lowe's.
M: All right. That's right.
R: $\quad$ Neither did $I$.
R: Yes. They have a bin inside the store, and you can dispose of batteries. I mean, I didn't realize it. I was throwing them away. That's a bad thing to do.
M: So, how did you find out about that, when you were just walking by there or did you?

## Segment C: Suburban 1; July 10, 2022

R: I happened to see it, and I thought, oh my gosh. So now I save my batteries, and I throw them away at Lowe's.
M: So you save your batteries when you go to Lowe's. Okay. How about you, Bill?
R: I feel that I'm in a constant learning situation. I pay attention to what people are doing, what they're offering, and I just look to be educated.
M: Okay. So you're always looking out for signals. Okay. And then David...
R: Absolutely.
M: David, in the past hour, you learned a lot this past hour.
R: $\quad$ Two to three things.
M: Aside from today, can you think of any time in the recent past that... Something about the environment that you didn't know or something that you just didn't have any knowledge of? Or you were doing it the wrong way, and then you learned how to do it the right way? Any thoughts on it?
R: Plenty of things. On my email...
M: About the recycling, the water, and the environment, littering, that sort of thing?
R: Yeah, emails. I mean, I could spend all day getting information. I read a couple weeks ago... I don't remember where it was, but they said that there's a site that's so beautiful, it's overseas somewhere, and they limit the number of people because they don't want damage done. Even adults sometimes want to touch. They've got a sign saying, don't touch, or you don't realize you're going to mess something up, even though it's natural. That might be that time that rock cracks or something or people will litter or something like that. And it was a beautiful spot, and they were protecting it by only... They said, make sure how many people were going each day because if you take this trip, you might not be able to go in.
M: So you have to make future reservations in advance before going. You just can't show up.
R: Right.
M: Right, because it will... They're limiting the amount of people that get to go to this place, so that it mitigates any damage to this natural location. Understood. All right.
R: [inaudible 01:23:40]. Go on.
M: $\quad$ No. Go ahead, David.
R: I was just going to say, this might not make me very popular, but I haven't been proven that... What do you call it? They just said it earlier. Everything going downhill naturally. I forgot the word for it. Bill said it earlier. The word's not coming to me. It's called global warming and climate change and all that. It hasn't been proven to me that it's happening.
R: Oh, l'm sorry.
M: $\quad$ No.
R: That's okay.
M: So Bill, David doesn't see how... Doesn't see the effects of global warming affecting him. So, do you think it doesn't exist or do you think that you haven't seen enough of it to believe it?
R: Enough proof.
R: Pay attention to what's just happening with the ice in Antarctica. Pay attention to what's happening to all the glaciers. Pay attention to how high the snow line is on mountains, and pay attention to how little water a lot of the West Coast has because of this. That's big education right there.
R: I'm not saying it doesn't exist.
R: Lake Tahoe, for example, is down by, what, 36 feet or something like that? And if you take 36 feet of water over the area, that that water covers, that is a lot of water that's not there. Now, where did that water go? Okay. It's gone into... Number one, it's gone into the atmosphere. Number two, it has been used and abused by people and...
M: It's not raining enough, also. There's no rain.
R: That's true. That's true.
M: The drought. The drought doesn't replace... Right. So David, I think you have... I think Bill gave you some homework.
R: Yes.
M: Right? Yeah. He gave you some homework. Okay. So let's bring it back.
R: I'm sorry.

## Segment C: Suburban 1; July 10, 2022

M: No, I think it's wonderful. I think this is an excellent conversation. You guys are the best focus group ever. So we're getting ready to close out. And I want to start with Carole, and then we'll go to Bill, and then David. We've talked about a lot of things today, and I appreciate so much your honesty and your candor and sharing your feelings. This is what you're doing. This is what we do. So, we're going to end this group with this last exercise. I want you to paint a picture in your mind. Just if you want to close your eyes, you can close your eyes, and I want you to imagine the ideal public water access site. It could be fresh water. It could be sea water. One thing you can imagine. Locate it close enough to your home that you can go to conveniently and interact in the water in some way. But does it look like? What features does it have? What is it that makes you want to go there and spend time over and over again? You can also say the things that it shouldn't have, like I don't want this. I don't want that, like too many people or et cetera. Like locations where you could be just isolated enough. So Carole, take us to your ideal public water access site.
R: I want to be off the road because I don't want to be breathing or inhaling fumes from buses, airplanes, cars, trucks, motorcycles. I want it to be clean air. I don't want to see any litter. I want to look around. I want to see sand, or I want to see the dunes, the sand, the grasses. I want to see it natural, a safe place where I can put down a blanket and just relax, not be afraid to close my eyes. I want to see some sea shells. I'd love to see children playing in the water, people fishing. I would love to see lifeguards because sometimes accidents happen around the water. And at our state parks, I like to have a bathhouse, and also the wheelchair access. It's very important that anyone that wants to can go and not be afraid that they can't get down to that water. Just a safe place to go whenever you want and just relax, have a good time, and just take the worries of the day away.
M: Wonderful. That's awesome. Bill? What's your ideal place? Take us there.
R: I want to go with Carole.
R: Deal.
M: So what Carole said. So we're going... How about we call it Carole's place?
R: Yeah, right. I cannot improve upon that. I just can't improve upon that. Closing my eyes and seeing that picture just... She took me there.
M: All right. So Bill is going to Carole's place.
R: Yep.
M: Okay. And David?
R: Okay, before I answer that question, I want to make one comment to Bill. First of all, I don't mind constructive criticism, and it's only when I'm attacked or you're stupid or this, that and the other, or something like that, that's wrong. So I have no problem with what you said. There's a lot of false information on the internet because l've also read things that were like, Okay, this has been 70 years and it hasn't changed at all, in pictures. But anyway, so there's no ill-will towards you at all. I just wanted you to know that.
M: Well, that's wonderful. This is why we have focus groups because we want differing opinions, and we respectfully have different points of view. And this is the wonderful thing about my job is that I'm able to bring people together even though they don't agree to talk things out and make them have a nugget in their mind, so that maybe they can take what they heard or learned from someone else and maybe want to do more of their own research. So I thank you so much. And Bill, I'll give you time to respond and then David, give me your ideal place.
R: Okay. I'm sure you've seen some people in your focus groups that are opinionated, though.
M: Well, that's the name of the company I work for, Opinion Works. So Bill, I'm going to hand it to...
R: Yeah. Dave... I...
M: I'm just giving you a chance to respond to David, and then we'll go to David's ideal place.
R: Okay. David, I am type of person that says what he means. The last thing I want to do is to insult people, even though I do it in unfortunately too often. And if I offended you, I am very sorry because...
R: You absolutely did not.
R: Well you talk to my wife and find out just how miserable I can be, as far as...
M: I didn't hear any words. I didn't hear any...
R: As far as telling... Go ahead.
M: No. What I was going to say is that if I would've heard... David, if I would've heard in any tone changes other than friendly and inviting and open, then of course, I would stop because I don't want anyone to feel uncomfortable, especially in an open discussion, and I don't think Bill did that.
R: No, not at all.

## Segment C: Suburban 1; July 10, 2022

M: Yeah. I think it was an exchange of ideas and I'm glad that...
R: I even knew it wouldn't be a popular opinion.
M: No. And you know what David, but it's your opinion and that's what makes it valid. All opinions here are valid, and I appreciate the fact that we were able to share differing opinions in a way that everyone felt heard. So, I hope you felt heard, David.
R: Yes.
M: And of course Bill, I hope you felt heard, and I'm glad that both of you shared your opinions, and as well as Carole, of course, the way you did. So, I want to go now to David's ideal public water access site in his mind. So, are we going to Carole's place? Are we adding, or is it a different place?
R: We're going to Carole's place, but we're adding that shack that has everything you might need.
M: So, we're adding a little convenience shack.
R: Yeah. That has the items that we've discussed earlier. Maybe a few more, maybe a few less. Doesn't matter whether it's rented or free or for sale.
M: So, some snacks and then items that may have been forgotten, like that sunscreen, like a hat, maybe a beach towel, maybe some T-shirts and shorts, maybe some souvenirs that you could take home to someone. Is that kind of the idea? Maybe some fishing equipment?
R: Yes.
M: Bait and tackle. Maybe a fishing pole. So, a little bit of everything, like a little happy convenience store that is not too big, but not too small.
R: Right.
M: Okay. Anyone else want to add to their perfect Carole's place?
R: You can't add a whole lot.
M: Okay. Well I...
R: The shack, I agree.
M: Go ahead, Bill.
R: I said, the shack I agree with. I think that's good addition.
M: Okay. Awesome. Awesome. All right, well we are done. I want you to give yourselves a round of applause.
R: Yay.
M: hank you so much for participating. At the end of this group, a little bit later on during this afternoon, you will be receiving your hundred dollar gift card and Carole gets one 150 because... Who won? Was it Carole?
R: Yeah.
R: Yeah. Carole.
M: $\quad$ Carole was the winner.
R: Thank you.
M: Yeah. So she will get 150. Everyone else a hundred dollars. Thank you so much.
R: It was rigged.
M: Awesome. Thank you. Yeah, I love it. I love it when people end a focus group, just kind of with big smiles and that they feel heard is what I'm hoping you all feel today. So, thank you so very much for joining us, and I wish you a very happy, happy Sunday.
R: $\quad$ Thank you. You made it [inaudible 01:35:55].
R: Thank you for choosing us all.
R: Thank you.
M: Okay. Thank you very much.
R: $\quad$ And the same to you, and thank you for guiding us through it.
M: Okay. You're very welcome. It was my pleasure. Thank you again. Bye-bye.
R: Thank you again. Bye-bye.
R: Bye.
M: Bye.

Segment D: Suburban 2; July 12, 2022
Moderator: ...start it now.
Respondent: Fine with me.
M: $\quad$ That is so that I don't have to take a lot of notes. You may see me scratch, I've got another keyboard over here. I might scratch a few notes as we talk, just as a reminder to myself. But we are not going to post the video. You're not going to get famous by doing this. You're not going to show up on TikTok or YouTube. We're not going to attribute any comments to any individual people. We'll work with first names only here tonight. Tell it like it is. We're not trying to catch anybody in a moment or anything like that. This is about hearing your opinions and your impressions. We're going to talk about stuff that's very benign, so speak your mind. Let's speak one at a time, of course. But I think that's easy in a Zoom setting. It's hard to talk over each other too much.
Like I said, if necessary, I'll just call on people. I'll do that here at the beginning because what we're going to do first is introduce ourselves. I'll just ask you all to give us a little thumbnail. I think what's interesting to know is, where do you live? Maybe city, state, and tell us a little bit about your life. Just give us a little thumbnail. Who do you live with in your household? What's a typical day like for you? Just give us, "I get up in the morning. This is what happens, this is my day. As I walk through that day, here's what's on my mind. This is what I worry about. This is what I feel satisfied and happy about." Donald, you're first on my upper left, so why don't we start with you? We'll just go around. Go ahead.
R: All right. I'm 78 years old. I'm a retired schoolteacher. I taught for 35 years in both Baltimore City and Baltimore County, Maryland.
R: You should be blessed.
R: $\quad$ Thank you. I did love it, really.
M: Where do you live today, Donald?
R: I live in Forest Hill, Maryland, which is right next door to Bel Air, Maryland, and that is about 25 miles North of Baltimore City. Things that I do, several days a week, I go to a gym. I have a small antique and collectibles business. I sell things on eBay. On Sundays, I go to a flea market on Pulaski Highway. It's at a bingo hall. I sell antiques and collectibles. Don't make a lot of money, but I have a lot of fun. I really enjoy talking to people about them. My favorite collectible is Zippo lighters. No, I don't smoke, but I have about 500 Zippo lighters.
M: Wow. Describe your favorite Zippo lighter to us.
R: Darn.
M: Do you have one you can show us?
R: No. Can you believe that? I went to the gym, so l've got my shorts on. The only thing I carry is my wallet and my iPhone.
M: $\quad$ That's alright.
R: I live with my wife, Virginia Jenny. She is a retired school nurse. I retired about 10 years ago. She retired about three or four years ago. Our oldest son, Zachary, lives with us. He's into writing, art, a little bit of model making, and video games, of course. We have four cats and just got a dog. It's what's called a Clumber Spaniel. It's the word "lumber" with a C in front of it, a rather rare breed. My wife... What did I click, something wrong here? Sorry.
M: We can still see you. You're good.
R: Okay. You're connected. What did I do?
M: That's okay, Donald. While you get that sorted out, I'm going to move around the screen to Bob. Bob, why don't you introduce yourself to us?
$\mathbf{R}: \quad$ My name is Bob [inaudible 00:04:30]. I'm retired and disabled. I suffer from a neuromuscular disorder called myasthenia gravis, kind of screwed up my life big time. Had to sell my motorcycle, things like that. About the only thing I do, I get up in the morning and three days a week, I go up to the pool in our development and I do water walking for exercise. You'd be surprised the amount of money I make in a year doing these surveys.
M: Oh, all right.
$\mathbf{R}$ : Oh, yes. I've made quite a bit of money. In fact, the laptop I'm using right now, I bought with Amazon gift cards.
M: Wow. How about that? Good for you. Where do you live?
R: I live in Odenton, Maryland. Just moved here a year ago. We live in a 55 plus community in an elevator building in Pine Orchard in Odenton.
M: $\quad$ Nice.

## Segment D: Suburban 2; July 12, 2022

R: I live with my wife, [inaudible 00:05:38]. She's a senior legal secretary. She's only 64 , so she ain't old enough to retire yet. She'll be 65 in November. I'll be 68 in October.
M: Bob, you're about 10 or 15 miles west of me. We're getting some pretty big storms right now here.
$\mathbf{R}$ : They came rocking through here about half an hour ago.
M: I'm hoping that we don't lose power or anything. If anything bad happens, you guys can just talk amongst yourselves. But hopefully, that won't happen. What else can you tell us, Bob? What brings you satisfaction in your day?
R: My granddaughter. I have one grandchild. We have one son and we have a granddaughter. She's four. She's scary smart. I have a niece who's six weeks older than our son. I can remember when she was three, she was talking in full sentences and our son was still grunting. My granddaughter's scary smart. She really is.
M: Bob, what do you worry about? What's on your mind?
R: I don't really. The only thing I worry about is politics in this country of ours. We used to be able to have differing opinions, you were not attacked for your opinion, and you were treated well. We are not that way anymore, and that's scary to me.
M: I think we probably all agree on that. One thing I wanted to accomplish in starting this firm some years ago was to create safe spaces like this where people could talk about stuff. I think that in these focus group settings, hopefully you find that issues can be talked about without people feeling like they're yelling at each other. We always try to make it an environment where people can have a nice conversation about things, even if they disagree.
R: $\quad$ That's fine with me.
M: Create that atmosphere. Welcome, Bob. I'm glad to have you here. Liz, I want to turn to you, if you're ready to introduce yourself to us.
R: Yep. I'm here.
M: Here you are. Tell us a few sentences about yourself. Where do you live? Who do you live with? What do you like to do in your spare time? What's a typical day like?
R: I live in Ocean View Delaware, which is near Bethany Beach. I've lived in Delaware all my life. I retired from teaching. I'm a young retiree, two years ago when Covid hit. I live with my husband. He also just retired as well. He worked for the Department of Corrections for 23 years. I fill my day now with outdoor activities. I'm a runner. I've trained and run marathons. I ride my bike. I like to kayak. I like to hike. I do a lot of those things with my husband when he's not working. He got a part-time job after he retired. I also just started a pet sitting, dog walking business this year, which took off pretty quickly. That also occupies my time as well. It's busy here in the summer. I don't travel very far from my home in the summer. We have a lot of parks and trails nearby, so I don't have to drive more than a couple miles to get to somewhere nice to go hang out, run, and enjoy nature.
M: That's great. Thank you. You're a busy person and living life. What worries you? What's on your mind?
R: What worries me, I would just say the state of what the country has become. People aren't as nice to each other as they used to be. I've really noticed that a lot. Also, I worry about just environmental issues. There's a lot of unnecessary pollution. I worry about the side effects, the long lasting side effects of some of the environmental pollutions, pesticides and whatnot, and poor drinking water. I think we might see a lot more adverse health effects in another 10, 20 years that they don't know about yet.
M: Of course. You bet. Thanks, Liz. Welcome. Kevin, you're next on my screen.
R: How are you guys? I'm 62 years old. I'm not retired as of yet. I wish I could be, but I'm not. I live in Joppa, Maryland, which is not too far from Forest Hill, where Donald is, just North of White Marsh, Baltimore, Maryland. My wife and I actually bought an old farmhouse about 20 years ago. We have a pretty good piece of property. We back up right to Gunpowder State Park. We like to do a lot of hiking down there. There's actually a steel bridge. We go down and do our fishing off the steel bridge, which is walking distance. We're also not too far from Mariner Point State Park, which is right on the bay. We go boating on that quite a bit as well. I live with my wife. I have three children, 19, 14, and eight. I have the broad spectrum. I have a son that just graduated from high school a year ago. He tried college for a year and just didn't like it. Now he's working as a plumbing apprentice, working for a commercial plumber, and trying to learn the trade that way. My other one's going to be starting high school next year. The other one will be in middle school as well. I still work full time. My wife works full time, but the things I enjoy is just spending time with my kids and watching them grow.
M: What's on your mind? What's worrying you?
R: Just like everybody said, it's just the state of the country. Like Donald said, we used to be able to debate with people and have a conversation with a person. It didn't matter if their opinion was different than yours,

Segment D: Suburban 2; July 12, 2022
you respected it and tried to understand it. But now it's not like that. It's like everybody's at each other's throat. If you don't agree with them, then they're ready to attack you, do physical harm to you, or what it might be. I don't know how it got to this point, but we need to try to get back to where we can talk to each other without demeaning somebody else or attacking them personally. Everybody has a right to their opinion. You can learn from other people too. I don't think there's enough of that going on right now. That worries me. For my kids, I worry about their future, what the environment's going to be like in 20 years from now. I worry about that. I worry about what kind of jobs are going to be available 20 years from now. I just don't know. There's a lot of things that I worry about, but I try not to dwell on them too long because it gets really frustrating if I do.
M: That's for sure. Thanks, Kevin. Welcome. Allan, you're next.
R: Just took it off of mute. I'm an economist by training. I started out professionally as an academic teaching at Rutgers University, then moved to the Washington area as [inaudible 00:14:12] economic policy fellow, then took some positions in government. My wife and I, we've been married 55 years and live in Rockville. My day, I get up, the first thing I do is get on the treadmill for about an hour. I have a weight machine, which I'm not as faithful about as I am about the treadmill. My salary's retired at this point, but I'm not. I have a not for profit that I founded that's created a free open source algorithmic financial contract standard, which we started because I was head of a financial regulatory agency and on the board when the 2008 financial crisis hit. No one knew what was going on, not the secretary of the Treasury. He was totally out to lunch. Not even the Fed chairman, who is the leading expert on the Great Depression. Basically, no one had the data or the analytics to understand what was going on and what was going to happen. We basically have created the computational infrastructure to transform regulatory data collection so that in fact, the regulatory community can be on top of things in real time basis and really get an early warning system. If they deploy it for the first time, they'll be able to see the interconnectedness and potential for cascading failures in the financial market.
M: That's fantastic. Is your tool in use at this time or is it still in development?
R: Yeah. Last year, the FDIC had a rapid phase prototype competition to come up with a better way to collect data. There were 44 big for profit companies like Deloitte and others. We were the only not-for-profit. Our whole team that we fielded who did the work, we're all volunteers. We were one of the finalists and actually secured a quarter of a million dollar prize for it. There's a risk model that's built around our standard. There is in India, a mobile bank that's built around our standard. I'm sure you've all heard of blockchains and cryptocurrency. Basically up until now, most of what took place on blockchains was just payment systems. For a disproportionately high amount of it, it was paying for illicit drugs, little girls, and escaping capital controls. But if you want to bring finance to the blockchain, you need to have smart financial contracts. There are, at this point, already three or four blockchains that are adapting our standard as the computational core for their smart financial contracts. We have two kids, one lives in Massachusetts. We have a granddaughter. He has a daughter who is starting high school this year and a daughter who lives in Colorado. She has two kids, a daughter who's also entering high school this year, and a son who's going into seventh grade. That's my life. As I said, my salary's retired, but I'm not.
M: $\quad$ Right. Keep it going. Thank you, Allan.
R: I was in Davos in May giving a talk. I was invited.
M: Fantastic. That's impressive. Thanks for joining us lowly people here today. We're grateful to have you and everybody, all of you. Paul, we're going to end with you in this introductory round.
R: Thank you. My name's Paul, obviously. I just retired somewhat and moved to Chester, Virginia. I had worked previously for the federal government, USDA Agricultural Research Service, and then at Texas A\&M Corpus Christi as a professor in aquatic biology. My specialty in a number of ways was in optimization of fertilization practices to have less problems downstream, as well as working on harmful algal blooms that occur in both freshwater and marine systems. I have crossed over basically from biology into chemistry. I do remote sensing and have published on it. We've named, I think seven species, new species, the science, and one new toxin that we discovered. I decided that life was passing me by, I was a workaholic, and the only way to break away from that and lend some support to a parent who was suffering from cancer was to totally step away. I did so last year. With her death, I coincidentally was talking to a colleague. A new facility opened 20 miles from where I live, and they're very eager to have people working there. It looks like I may get into a part-time scenario. My enjoyment is founded on growing up on a farm. I enjoy raising vegetables and fruit. I hopefully will be able to get into a bit more travel and other hobbies that l've put to the sidelines for the last 38 years. I think that's a fairly good summary. I'm single and have no children.
M: What's on your mind? What do you worry about?
R: I think that the other panelists have pointed out the real tough issues. There's not going to be much of a social climate for the next generation, and the environmental status of the environment is going down the tubes pretty darn quickly. Water is perhaps one of the biggest features that is going to impact even the

United States, as we're seeing out West. It will become more and more of an issue in the next 15 years in the United States in terms of water quality, having safe drinking water, and the downstream effects of recreation and other trivial things.
M: You've got a great deal of affinity for the subject matter of this group, and I think we all do to a degree. You're professionally though working on some things that are very directly related to some of what we're going to talk about. What I want to take us all to, and I think Liz and Kevin both talked a bit about this in their introductions, but what do you like to do outdoors, specifically with regard to the water? I'm just wondering how connected people feel to the water that's near you. Except for Liz who lives at the ocean, everybody likes to drive from wherever they live to the ocean and be able to experience the relaxation of the waves crashing on the beach and all that stuff. But there's water that's close to us in creeks, lakes, ponds, or bays. What kind of relationship does each of you have to your most local water? Do you relate to it? Do you find relaxation in it or recreation in it, or something else like fishing? Talk to me about... Just jump in, I think.
R: $\quad$ This is Bob. I hate the ocean. I hate salt water. I grew up in upstate New York in the Finger Lakes region, swam in a lake, love fresh water. I have friends that live on the Magothy River. They have a boat, well, had a boat. We would take the boat down to Lake Anna in Virginia so we didn't have to deal with the salt water. My wife loves the ocean, but she's local. She was born here. I wasn't. Like I said, I love the water, don't get me wrong. I wish I could afford a boat, but I don't want to deal with salt water. It's corrosive to the engine and everything else.
M: $\quad$ Sure. But you go out there on Lake Anna, you find your fresh water. What are your feelings when you're out there on the lake?
R: I love being out on the lake. I miss it. This being disabled is the pits. I have to walk with a cane.
M: I want to ask you specifically about that. As a person who needs to walk with some assistance like that, do you find a way to still get near the water? Is that something you're able to do?
R: I go to the pool where I live every three, four days a week. I enjoy the pool. I water walk, I can swim in the pool. I don't need that much help. Yes, I have to use a cane. I use a cane more because I'm afraid of falling more than anything. I have what I call a stand up walker, which allows me to stand at my pool height at 5 ' 10." When I'm not water walking in a pool, I can walk around my neighborhood. I also miss being outside on a motorcycle. I miss my motorcycle. I miss being able to play golf. Life sucks some days.
M: Right. We're so sorry about that, Bob. Hopefully, as you continue to move forward in your life, you can find other forms of enjoyment in the outdoors.
R: I enjoy the outdoors. One of the things I used to do a lot outside was I coached and managed little league baseball for 20 years. After my son was no longer playing, I was still out there umpiring. That was fun. I had more fun umpiring than anything.
M: All right. Let's hear from others. What kind of relationship do you have with your local water, anybody?
R: I'm not, in general, an outdoor person. Although, we have a friend who owns a boat. In fact, his home is on the Magothy River. We would take rides in his boat. He and his wife also have a place in Florida. They are snowbirds. They go down there in the winter. He has a boat down there. My wife and I visited him the last two years and we went on his boat. It just blows my mind to be about out on, particularly the ocean, this huge ocean. My wife really loves the water more than I. We go to Ocean City, Maryland, at least once a year. Actually, when she was growing up, her parents had a house on what's called Keenwick, which is an area near Fenwick Island, which is right across the border from Ocean City, Maryland. She loves Ocean City. When we go there, she loves going to the beach. I go. I get in the water a little bit. I sit on the beach and just contemplate the ocean. I do enjoy that. But actually going into the water, not so much.
$\mathbf{M}$ : All right. Others, what kind of experiences do you have?
R: I'm sorry, Allan, go ahead.
R: $\quad$ No, you go ahead. I'll do mine after you.
R: I mentioned a little bit in my introduction about some of the things that I like to do. I live right next to Gunpowder State Park, which is very fortunate. We do a lot of hiking in that. But there's also a little river or stream that goes through the neighborhood. There's a steel bridge that we like to go down to. We'll fish off the steel bridge quite a frequently. I'm also really close to Mariner Point State Park, which is in Joppatown. It's actually where Bird River and Gunpowder River converge. That's where Mariner's Point State Park is. My wife's sister's husband has a boat there. We go quite frequently. We'll go out there on his boat, we'll go fishing, swimming, and things like that. We stay pretty close connected to the water close by to us. We use it quite a bit during the summer, especially now.
M: Give me a few adjectives to describe your feelings when...

Segment D: Suburban 2; July 12, 2022
R: When you get out there, it's peaceful. You don't hear the buzz of the city or the traffic. It's quiet. It's just relaxing. You can just unwind because you don't feel all the pressures of the day being weighed down on you.
M: $\quad$ Right. Allan, you wanted to say something.
R: I do want to put in a good word for salt water. I much prefer salt water to fresh water. Both my wife and I grew up in Connecticut. She grew up literally on the shore in New London. I was inland a little bit, but spent a lot of time on the shore. One of the benefits of salt water is if you have a cut, scratch, or anything else, salt water heals it very quickly. Secondly, if you are in salt water, it takes a lot less effort to float when you're swimming than when you're in fresh water, because you get more buoyancy out of salt water. There is something about the shore, about the ocean or a sound that's part of the ocean, that it just has a tremendous appeal. And even though my kids didn't grow up on the shore, because we're in the DC mesh [inaudible 00:30:33], they had enough of exposure to the beach growing up that, I mean, it's like my daughter really feels, it's incredibly special. When she comes to visit with her kids, she always goes off to the shore for a few days so that they get the beach experience as she puts it. So I mean, there is something great. As a kid, I used to love body surfing. They used to love the end of August, because the hurricanes were coming in and we get great waves and the body surfing was wonderful.
M: $\quad$ There's got to be an upside to a hurricane, I guess.
R: Yep.
M: All right. Liz or Paul, did you want to add anything into this conversation about water and your enjoyment thereof?
R: $\quad$ Sure. I can chime in if you want?
M: Yeah.
R: Okay. So l've lived in Delaware all my life and I grew up fishing with my dad and we go out in the bay, the ocean. I don't have a motor boat, but I have a kayak and I kayak a lot in the inland bays, which are very close by to me. I mean, there's the [inaudible 00:31:45] Wildlife Refuge, Holtz Landing, [inaudible 00:31:50] canal. We kayak at all those locations. I also like to swim, but swimming's really not that conducive, except for maybe two months out of the year here, because the ocean water is too cold for me. I mean if it's not at least 78 , I'm not going in. And it's rough too. I'm usually stuck out there swimming alone months. It's finally warm enough, because my husband can't swim. And we typically go to [inaudible 00:32:21] to go swimming because the beaches aren't as crowded there. But I love to swim. I mean, I just came back from the Dominican Republic two days ago and I swam the whole time I was there. I can swim for hours and hours. I do wish that opportunity was more available here, but it's more a climate issue just with water not being warm enough. And also, we have pollution issues here as well. We get water advisories where you can't go in. It's becoming more problematic through the years.
M: Do you swim only on the ocean side or do you swim in the inland bays too?
R: I wouldn't want to try to swim in the inland bays near me. They tend to be pretty polluted. Ocean, but when I was growing up, I used to swim in Bay Lewis and that's still a nice place to swim. But Lewis is about, it's quite a hike during the summer. I don't even attempt to go up there during the summer.
M: Yeah. Okay. Paul, anything to add?
R: So I have a 1977 Boston Whaler that has been renovated and is my principal boat with kayak and canoe also available. I am involved with the river keepers locally and I have a lot of concerns about the water quality generally, as I probably preface in my earlier conversation. But I live three miles from a launch point and that's very convenient. The one thing I would have to say, that I'm very displeased about having moved to Virginia, is the exorbitant costs associated with using their boat launches. They have multiple sets of fees associated with that and I think that it diminishes people's desire to use those facilities.
$\mathbf{M}$ : Those are boat launches run by the state?
R: By the state, the state sponsored. So you of course need the fishing licenses if you have any sort of fishing gear, whether or not you're planning on using it. And the second step is that you need a parking permit on the launch in order to be able to avoid a ticket. And then of course all the stickers on the boats, et cetera.
M: All right. So Paul is taking us to a place that I wanted to go next. I mean, I want you all to, whether you like to go there or not, near you hopefully is an access point for the water, salt water, fresh water, whatever you live near. If you can imagine that or think about the nearest access point that you are aware of close to you. I'm wondering what the barriers are for you? What are the things that discourage you? So Paul has just talked about high fees for boat launching near him, and Liz mentioned a little bit about pollution in the inland bays. What are the things that are keeping you away? There could be other issues. What are the things that keep you away from your nearest launch point or your nearest access point, whether that be a park, a bench by the water, a trail along the water, a fishing hole, whatever it is? But on public land, I'm talking about public access points, not private property. So what discourages you from going to those local points?

## Segment D: Suburban 2; July 12, 2022

R: Well, this is Bob. I've only lived in Odenton for approximately one year. I have no, and near me is two. It's called Little Patuxent River. But that's so filthy dirty. I wouldn't go near it anyways.
M: Okay.
R: Okay. But yet I see people fishing in it and I see other people swimming in it, but I wouldn't touch it.
M: Now can I pause you? I just want to pause that and ask you, how do you know it's so filthy and dirty?
R: Well, it doesn't look all that good from when you drive over the bridge and look into the water. I mean, I can remember going to Bermuda and going to Honolulu and you're flying in an airplane at 500 feet and you can see 50 feet down into the water. This ocean city is stuck in the water. You can't see your feet anymore. Let's be honest about it.
M: Yeah, okay. But you haven't heard talk in the community about it being dirty, you're mainly basing it on your visual?
R: Yeah, on my visual.
M: Yeah. Okay.
R: I would not imagine fishing in it or swimming in it, because it is the Patuxent River. Who knows what's been washed further down into it? I mean, we have three of them. We have the Patuxent, Little Patuxent and I think the Middle Patuxent. Okay. And through here it's called Two Rivers is a new development in Odenton, that's sort of at the end of the Patuxent River. But I wouldn't go swimming in it. Sorry, not happening.
M: No, that's fine. And think back to where you lived prior to Odenton. Was the situation similar there?
R: I lived in Laurel. I mean, I moved all of 17 miles. I moved from Prince George's County to Arundel County.
M: $\quad$ And was it same thing over there in Laurel?
R: Well, we had the Patuxent River, which you couldn't go swimming in it, because it had a big old dam for the WSSC on it. And nobody swam in the Patuxent River, where it went through Laurel.
M: Okay.
R: It wasn't allowed.
M: What about other folks? Access Point near you, what keeps you from going there?
R: So the access point I have is not too far from where I live. It's probably like five or 10 miles at the most. The only issues I've ever run into is there's basically only one access point. If you go on a day when it's popular, like a Friday or a Saturday, there'll be people lined up with boats, trying to get their boat launched and you'd sometimes have to wait hours and hours to get your boat into the water. So that's the only problem that I foresee, run into occasionally is just getting able to get into the water and not spending a couple hours trying to get into it. But if you go during the rest of the week, sometimes on the off peak hours, not that hard.
M: Kevin, can you imagine other places you know on public property near you where a boat launch could be added? I mean, is there potential to increase access?
R: Yeah, there's definitely potential, especially in Mariner State Park, there's definitely more places that they could put in more docks easily, to have more boat launches. But right now there's currently only one there. So that's part of the problem.
M: Is it a boat launch only that's needed? Or do we need more dock, marina type facilities?
R: No, I think probably a little bit of both. They definitely need more boat launches. They really don't have much of a marina there at all. They just basically have a boat launch. But even a couple more boat launches would be beneficial. Especially when it's a weekend or something like that when everybody was trying to get out there.
M: You bet. All right. Other folks?
R: Yeah, this isn't boating, it's just access to the shore. Quite honestly, Absent and New bridge over the bay. I mean, it is such a difficult trip if you want to get to the ocean from the Washington area that it really discourages people from doing it. We put a pool in and I swim laps every few days in summer weather. I'd love go to the beach, but it's just a really tedious trip. It's horrendous.
M: So Alan, what about, I know it's not the ocean, but would you ever consider going over to Glen Echo or going to, I mean, Great Falls or something on the Rock Creek or whatever that's closer to you?
R: Well, I mean what we do is I bike every weekend along the canal. So I mean, if you consider that water access, it's there. Anytime we get company, we always take them to Great Falls and we hike in Great Falls. The scenery is beautiful, there's lots of interesting things to do, but that's a very different experience than going to the beach for the beach experience. It's very desirable, very pleasurable to take advantage of it, because it's a 10 or 15,10 minute ride to get to Great Falls. It's a 15 minute ride to get to a trail that'll take me down along the canal. But the ocean is, it's just too hard to get to.

## Segment D: Suburban 2; July 12, 2022

M: So besides your love of the ocean and the fact that makes you want to go over there as opposed to enjoying some of your more local freshwater, which is totally understandable of course, but l'm just wondering what else keeps you from some of these more local access points for your local water?
R: I would say if you consider hiking along the C\&O canal, going to Great Falls, biking along the canal, then we access them regularly. We don't go swimming in.
M: $\quad$ Yeah, no, that's fine.
R: Yeah, no and quite honestly, we consider the Washington area in that respect really a desirable area to be, because you've got all of these lovely parks to go to that you can walk along, hike along. They are easy to get to during the weekend. The roads and Rock Creek Park is shut down so it's easy to you want to bike in the park. It's great to bike in the Rock Creek Park. So there are lots of things, but they're not what I think of is access to the water. I think of access to the water as putting on a bathing suit and jumping in the water or getting on a boat.
M: Or a boat.
R: Yeah, I'd love to see somebody go swimming here at Great Falls.
M: Probably not advisable. It's not advisable.
R: I've seen a lot of people kayaking.
M: Also not advisable.
R: No, actually they have a lot of kayakers along Great Falls. In fact, they have a course set up there for the Olympics one year, that's were training for the Olympics in Kayaking.
M: You just have to be really careful at Great Falls. I mean, it's very unpredictable.
R: There is a boat launch on the Potomac, across the river from the city. It's called the... Shoot. Coming I work for I ran It. It's right there by the Pentagon. That's a boat launch. The next boat launch that I know of is all the way up at Whites Ferry. Then there's a couple boat launches in on Anacostia.
M: So Donald, any issues for you that are keeping you away from your local water?
R: Like I said, I'm an indoor person. However, as I was listening to everybody talk about their experiences, I remember when I was a kid, well my dad had a small boat with an outboard motor and he was, remember the Odd Fellows and they had a club called the Triple Link Club on the Delaware Bay and they had a house there and we would go down there and fish off the dock and so forth. That was always fun. I went fishing with my dad a lot of times and the access water around here, when we got the Rock State Park and we're not too far from Gun Powder Falls Park. And most of the times when I've been to them, my kids wanted to go. And it's funny, I always enjoyed it, but I wasn't someone to say, Hey, let's go. But if other people suggested and want to go, I would go with them and have a good time.
M: $\quad$ That sounds good. You might be surprised.
R: Yeah.
M: Paul, anything from you? Anything that keeps you away, besides the high prices that your local boat launches?
R: I have had negative experiences in my lifetime with remote boat launches and damage to vehicles. Basically, being uncontrolled and having break ins occur to the vehicles once you leave them. And the other issue of course is one of having any of the resources that you would normally think of, a portage on or other means of taking care of bodily functions, often are missing. A phone, back in the day before everyone had phones, but having a means of connecting in case you have some difficulties. Some of the launches are in somewhat remote areas or pockets, lower elevation, where your signal is not as well trans transferred.
M: So one of the points of curiosity here in this project is whether there's been a change in anybody's relationship with the water and what that's meant in terms of your appreciation or your behavior as a result? So mainly I'm interested in, I know that as in Bob's case, health events do occur in people's lives and that definitely changes your ability to do certain things that you've always done. So there's that. I think I'm interested in hearing about any times in your life, going all the way back to childhood if necessary, when your relationship with the outdoors or with the water has increased, where there's been an inflection point, where something's happened and you've been more connected to the outdoors and specifically if possible to water. But I mean, has there ever been a time like that for you when things have changed in that direction?
R: For me, the change came when I was 13 years old. My father worked for the VA [inaudible 00:48:36] New York. We lived on [inaudible 00:48:38] Lake. We swam fall, winter and spring at the YMCA and then we spent the summer swimming in [inaudible 00:48:48] Lake. My father transferred down here and then all of a sudden it was three hour drive to Ocean City. And of course, back then there wasn't two bridges either. So it was very tough for me, because I was the oldest of four boys and I was used to having the run of that stupid little town. I'd get up in the morning, I'd get dressed and I would go out to the park, we'd play baseball in the

## Segment D: Suburban 2; July 12, 2022

morning, we'd come home for lunch and then we'd hit the lake, didn't come home for dinner and then we'd be out until the street lights came on.
M: So how did that extreme engagement with the outdoors as a kid translate for you into your aptitude?
$\mathbf{R}$ : It didn't work out. I disliked having moved down here. Okay?
M: I hear that. Yeah.
R: But now l've been down here since 1967. Okay. But some days I wish we'd have never moved down here. But then l'd never met my wife. Well, we'd never had our son. So it goes back and forth.
M: That's life, right? But I'm just wondering about those experiences as a kid, did that impact you in some way in terms of your priorities or what you care about or how you've lived the rest of your life? Is there anything you take from that experience as a kid, being in the outdoors?
R: Well, it was just difficult to change.
M: Yeah.
R: $\quad$ Okay. Try going from having to run of a little town of 9,000 people to now moving into a major metropolitan area and all of a sudden I wasn't allowed to run. I used to run and it was very difficult for a while.
M: Yeah. What about other folks here?
R: Well, as I said, when I was a kid, my father loved to go fishing and I would always go with him. To this day, if I get near a telephone pole or any wood that's been treated with [inaudible 00:51:01], the odor of it takes me right back to being on the docks with my dad or out the boat, fishing and so forth. And he also had a couple of friends, who had boats and several times we went fishing with them. I always enjoyed that very much. As I got older, I kind of drifted away from that. No pun intended of course. But I just have such fond memories. That's some of the best times l've ever had with my dad, where we went fishing, because there were so many different places where we could go fishing.
M: I'm wondering if those experiences with your dad way back when fishing, have meant something to the rest of your life? Has that translated for you into priorities or attitudes as an adult? I'm just curious.
R: Yeah, I'm not sure about that. One pleasant thought I had as an adult, whenever we're down at Ocean City, my wife always says when we win the lottery, where do you want to buy a place? And the idea of having a vacation home on the water is just mind blowing. It does in a way take me back to when I was a kid and my wife, of course she has many fond memories, because she used to spend every year her whole summer down near Fenwick Island and they had a house that was right on the water and she used to catch crabs and all. She didn't like them then, but her mother always ate them. She loves crabs now. In fact, we had them for dinner tonight.
M: $\quad$ Nice. All right. Well, anybody else before I leave this topic?
R: Yeah.
M: Yeah.
R: It's like when our kids were little, we wanted them to enjoy the things that we enjoyed, which was the beach and swimming, being outdoors. When our kids grew up and moved on to adult life, we didn't feel the same imperative to sort of endure a long drive to get to the beach.
M: Right. Yeah. All right, so I want to share my screen with you. And you've already seen that welcome screen. So I want to test a few ideas. Just we're going to do this as a lightning round of it. Everybody doesn't need to talk, but agree, disagree, strongly, somewhat neutral, somewhat strongly. So being near the water makes me feel happier. How do people feel?
R: $\quad$ Strongly agree.
M: Okay.
R: If it's fresh water?
R: We'll agree.
R: I agree.
M: What if it's salt water, Bob?
R: That's my wife's son. She loves the beach.
R: $\quad$ No, I absolutely strongly agree. But again, I love the smell of salt water, the sound of the waves. Even if they small waves, there's just a wonderful calming sound of the ocean sort of lapping up on the shore. The Seagull squawking. I mean, it's just a very wonderful environment. You feel good in it or I feel good.
M: Yeah. Liz, what do you think about this statement?
R: I would say strongly agree. I like both fresh water and salt water. But one of the parks that I'm running at, Holtz Landing, it has both. It has little burrow pit, which are filled fresh water and they're actually really

Segment D: Suburban 2; July 12, 2022
scenic to look out, especially in the spring and fall. I take a lot of pictures and then of course there's the bay right there, which is one of the places that I like to launch my kayaks. But I would say strongly agree. I like being around the water. It makes me happy. I couldn't imagine not living near some sort of body of water.
M: I want to go to the next one. When I'm in the parks or on trails near the water, I see other people like me. So you can interpret the like me part of that however you want. But what do you think about this one?
R: Strongly agree. Yeah.
R: Yeah. Strongly agree.
R: Others enjoying the same thing. That's nice.
M: Does anybody disagree with this? I'm curious. I mean sometimes people don't feel this and so how do people feel?
R: I disagree with it. First off, I'm not big on walking on trails.
M: Okay.
R: I do like the water, but seeing people on trails, man.
R: I actually agree. When you say, see other people like me, I interpreted that as people enjoy being outdoors, walking, taking in the beauty of nature. There's a sense of bonding. It doesn't matter how old they are, how young they are, what they look like. If they're out there enjoying the outdoors, out there enjoying being close to water, there's a sort natural presumption that they value the same things you value.
M: Yeah, absolutely. Okay.
R: I find-
M: Go ahead. Sorry.
R: I disagree. Paul here. I disagree just from the perspective that most of the people I see on the water are not concerned with leaving it in as good or better shape than when they got on it. So that is the one issue that is bothersome to me.
M: Paul, I want to come back to that point with you in a few minutes, because you'll see this conversation is going to kind of go in that direction. So I want to, let's put a bookmark in that thought, because I want to explore that a little bit more with you when we get there. Part of this, the purpose of putting a statement like this on the screen, is that one of the things that we often hear, and it's not really the case in this particular group tonight, is that some people don't feel welcome in our public spaces. Some people go into public spaces or go near the water and then they don't see people that they feel connected to or don't feel that affinity with others, or they kind of almost get a sense of lack of welcome from other people that are there. Sort of like, hey, what are you doing here? Kind of a thing. So it's always an important thing for us to be checking in with each other around our public spaces to see if all of us feel equally welcomed into those spaces and feel like they belong to us. If it's a public space, it should belong to all of us. So do we feel that way? It sounds like mostly do. Yeah.
R: Actually, there's quite a class society associated with boating and so that still exists.
M: Sure. It definitely exists. You're right. But what are you talking about, Paul, specifically? Can you describe what you're saying?
R: Well, as an example, I mentioned having a 77 Boston Whaler, center console lawn dock. I don't keep it in perfect shape. I enjoy the boat. I keep it up in terms of its maintenance, but I don't worry about having a beautiful paint job inside and out. I'm not going to spend $\$ 75$ for the most fancy life preservers for some of the people on the boat. Maybe for myself l'll do it. But for the people who go out on a one shot deal, where I'm providing them with the needed safety equipment, I may spend the $\$ 15$ and they won't have the nice fancy units. So I think that there's a little bit of snobbery associated with, even sailing is probably a bigger one that l've seen over the years, where if you are in a smaller, older boat, you kind of get looked down on.
M: Okay.
R: I remember I had a friend who owned a sailboat. In fact, he brought it down to the Baltimore Harbor one time. My wife and I went down and went out with him on it, and he was telling me that there are sailboat people and power boat people and they stay apart. And I don't know that there was animosity, but the feeling was you sailboat people are not like me and the same for the sailboat people. So I haven't had any experience for that in a long time, but I remember him very clearly telling me about that. That there was the power boaters and the sail boaters and they just didn't mix.
M: Right.
R: I think you're absolutely right. I mean, it's like Oklahoma and the farmers and the cowboys.
R: Oh yeah. Right, right.

## Segment D: Suburban 2; July 12, 2022

M: All right. Let's go onto another statement. There's convenient access to the water for boating, fishing, or swimming near where I live. How do you all feel about that one?
R: I strongly agree with that. There's definitely that where I live, so several places I can go fishing or swimming.
$\mathbf{R}$ : So l'd somewhat agree because while the areas I am there is easy to go boating, fishing, swimming, not quite as much.
R: I tend to disagree, but based on my friends who boat, I think access to boating is probably better than access to swimming, if you're looking at public waters. Fishing, I think is also, if you fish, I think there are places where you can fish easily by the canal off the river. Always people fishing.
M: So as Kevin said earlier though, even if there's good access, there could be better access. I mean, there are some issues, overcrowding or whatever the case may be. What I want to do next is kind of ask you to help me think about a water access site. Let me put some boundaries around this. So we've got two really strong ocean people here tonight, and I want to reveal to you that we're here on behalf of the Chesapeake Bay Program tonight. So we're focused on the Bay and its tributaries. We're not focused on the ocean. You all live, I think Liz probably technically lives just outside the Chesapeake Bay watershed, it sounds like, but you're awfully close and it's accessible to you. And everybody else lives inside the Bay Watershed.
So we want to think about, my goodness, that's a big rumble of thunder, sorry. So we want to think about accessing that kind of water. That's what we're talking about. So the Bay itself, the main stem and the tributaries that come off of the Bay, which includes some of the ones that you all have mentioned, like the Potomac or the Patuxent, or the Middle River, or any of those that you all live relatively close to. So tell me some features that a public water access site should have as far as you're concerned. If it's a place that you want to visit, what does it need?
R: It should have facilities. I would hope they have fuel.
M: Facilities, meaning restrooms, is that what you're saying?
R: Yes. Restrooms, facilities. It'd be nice if they have some place where you can get some to eat if you need some, if you want. Or where you can buy stuff to put on your boat when you go out on the boat.
R: All little stores that people are running. So it's not really something and my opinion that you know, can just snap your fingers and people are going to automatically set up a shop there.
M: No, that's true. Although, let's say for the moment that we can wave a magic wand and things like that can happen that are otherwise not always so automatic, but just kind of thinking about what might be appealing, even if it's not easy. So in Bob's case, maybe a little store that sells some things would be helpful. What do other people want?
R: Lifeguards, if we're going swimming. You also need fuel.
M: All right. For the power boat folks among us. What else?
R: Multiple docks. Maybe more than one launching point. Maybe several in an area instead of just one to make it easier for people, multiple people to access the water.
M: $\quad$ That's clearly a need you have where you live. What else?
R: $\quad$ Those things all appeal to me too, even though I don't own a boat or anything, but it would just give me a feeling of, gee, this is a place where people can fish. They can maybe go swimming, they can obtain things, they need food and have rest rooms and stuff. So that it's kind of something for everybody type of thing. Makes it appealing to me.
M: Other people?
R: Maybe some trails along the river or the park or wherever it is. Some walking trails. Defined walking trails, because not everybody likes to go swimming or boating, but if they're at least walking, like Allan likes to walk along by the C\&O canal, maybe walkways or pathways through the park or around the water would be helpful too.
M: Okay. Go ahead, sorry.
R: There was something that was just wonderful on the canal, and it's not available now unless something's changed, but they had the park service ran these mule pool barges, and whenever we had kids coming to visit, we would always take them for barge rides on the canal. That was really a delight. And the rides always included going through a lock and explaining to a kid the role of a lock and the canal is just when they see the barge going up and down and gates being opened and closed. I mean, I don't know, the boats deteriorated or the budget got caught out. I don't know what it is, but they have disappeared. You could take them from both Great Falls or from Georgetown.
M: Yeah. My impression is that-
R: They're back.

## Segment D: Suburban 2; July 12, 2022

M: I think they've brought those back. There was a period of renovation or something like that, but I think they may be back. Any other thoughts on features, things you'd like to have at a public access site near you to make you, I mean-
R: Parking.
M: Parking? Okay.
R: Let's be honest. Police patrols, so your car doesn't get broken into.
M: How many people feel that way? That's an interesting point, Huh? Is that a widespread feeling in this group?
R: I think so. People will feel safe. I was really surprised to hear the thoughts that all the expenses involved with launching a boat and everything and parking and all that. I always had an impression that, especially when was run by the state, that there were nice places to launch a boat and the fees were nominal enough to support the system, but not that they were extremely high. I was really surprised to hear that.
M: And I think as you said, I think it would discourage people.
R: I think Steve, you got more thunderstorms headed your way.
M: Oh gosh. We just had a big one. I don't know, but I saw the lightning flashing behind you as well. I just saw that.
R: You should have heard it here.
M: It's crazy. Okay, I want to show you all some pictures. And what l'd like you to do is just imagine yourself in these settings. And the lower right one has got a lot of people in it, but I think what we're trying to illustrate there is kayaking class, just kind of an activity. So don't get hung up on the fact that there's 50 people, maybe there's 10 or it's not so many. But I think I'd like to ask each one of you, and you can just jump in as you look at this screen with $A, B, C$ and $D$, do you imagine yourself in one of these settings, which one feels most appealing to you and what do you like about it?
R: I'll go to, if that's a store or a restaurant, you'll find me there in the upper right hand corner.
M: $\quad$ There you go.
R: Because I can't sit on that bench and I sure as heck can't get in the kayak.
M: Okay. All right. So Bob's up in B there sitting at the outdoor cafe. That sounds good. What else?
R: What I don't like? There're no beaches.
M: $\quad$ No beaches. Okay.
R: It's like for whatever reason, in order to get into water, I just instinctively feel you have to walk through sand.
M: Right?
R: No, there are no sand beaches here. Which, so in the B picture, I can't tell exactly what they're doing, but I guess you can jump off of those docks.
R: Yeah, when I was a kid, we'd been diving off the docks.
M: You probably could jump off those docks. I think they're probably launching those sculls. Is that what those are? I don't know for sure.
R: Yeah, the closest doc, whatever you call it, looks like there's one or two sculls on it. Yeah. But it's sort of like the pictures of the seats and the picnic table. They don't look like they're a location to sit and look at the water, not go into the water.
M: Okay. So that's not your thing, Allan. You're not going to do that, right? What do other people think?
R: $\quad$ Oh, I realized that picture $B$, it's sculling.
M: Yes.
R: I used to work for Ran Thompson Boathouse on the Potomac River. That's what they did down there was sculling.
M: All right.
R: $\quad$ This is kind of a point from the last question, but it also fits here. There's little effort with $A$ and $C$ particularly to have any sort of full activities such as a grill or other means of entertaining yourself other than sitting there. If it was possible to make it into more of an outing with a meal and spending time, I think it could add to the experience and increasing the time exposure on a lake or on a water body will give the chance for people to learn more about that system.
M: Okay. All right. So you would add grills and maybe some other amenities. I don't know what, but volleyball courts, I mean, who knows, right? Paul? You would add other things to A-
R: Yeah, and even $C$ them.
M: And C. Okay.

## Segment D: Suburban 2; July 12, 2022

R: Well really there's no power boats going to be at any one of these pictures.
M: Well, I mean, no, probably not. You're right. This is not a power boat series of pictures. Well, let me show you one. All right, let's flip the screen.
R: $\quad$ There we go.
R: Before you change, I was going to say one other thing would be next to have geese police to keep all the geese away from what the people are going to be.
M: Okay. Right. Those darn geese. And so here we've got a power boat launch. We have some other things going on, some fly fishing. By the way, these are all actual pictures from different parks around the Chesapeake Bay region. So they're all actual sites that are near us, relatively near us. So who's drawn to anything in this series?
R: So I would probably say E because of the boat launches, it looks like there's multiple boat launches right next to each other, so that's a bonus. Just so you can have easier access to the water. Although I like to see some other things there. I can't really tell from this picture what's all close to that, to the launch there. But obviously it would be nice to have restrooms and things like that close by and other things like that as well.
$\mathbf{M}$ : What is your feeling, Kevin, about security in the parking lot that's been mentioned?
R: I don't really have that, haven't had that much of an issue by where I live now. It could be just because of what time of the day that I go maybe I don't know. But usually when I go, there's other people around in the park and so it's not like it's scarce. I like the only one there. So I haven't really had any problems with it security wise, but I could see where one of the gentlemen suggested if they had regular patrols going through the parks and I think they do occasionally, but just to monitor it would be helpful.
M: All right. What other thoughts do we have about this screen? Liz, what are you thinking about? I see you're examining it. What are you drawn to anything here?
R: I think I like G just because it seems to be a more natural area. I could kayak out there. Although, I mean the boat launch one's pretty good too. That looks like a pretty nice area to launch. We've rough launch area, they've been fixed since then, but it's not fun to try to launch a kayak boat launch.
M: All right. So I want to take you now to, this is, I would call this a screen of trade offs. So there's a bunch of bullet points here. We'll just kind of briefly talk about each one. And I just want to get a feel from you about some of these kinds of issues with regard to these public water access sites that we're looking at. So would you rather have a site that is totally free of people? In other words, you're going out into nature and you don't want to see other people? Or do you want something that's busy where there's people around, there's activity or something in between? People have feelings about this issue?
R: I like people.
M: So are you a busy, you're a beach guy so you probably don't mind if there's bunch of people around, right?
R: Oh, I would love to see people around with the old company I used to work for, because we ran stuff for the park service all around DC.
M: So people equals money, right?
R: Yeah, people equal tourists, equals money, man.
M: I'm talking about you though. I'm not talking about your company when?
R: $\quad$ Oh, I don't work for them anymore.
M: $\quad$ No, but I mean if you were out there on your own, if you were-
R: We would be renting the equipment. I mean on the Potomac River we ran, shoot, it's south of National Airport, it's the Washington Sailing Marina. We ran that. We ran the boating marina by the Pentagon just north of the 14th Street Bridge. We ran a place that you could fish up off the Clara Barton Parkway near, I can't remember the name of it. We ran that, we ran all kinds of neat stuff and then we ran golf and ski resorts in West Virginia. We were the concessionaires at Mount Rainier National Park.
M: Wow.
R: We were concessionaires at Sequoia National Park. I got to travel all over the country.
M: I want to ask Kevin or Paul what you think about this issue of people. How many people should there be?
R: I would like to have some people, but I'd prefer not to be the only one there because that's kind of, can sometimes just feel, I don't know, sort of isolating. So I like to have people around. I just think, like Allan said earlier, it's sort of like when you have other people enjoying the same thing that you like, you feel connected to them a little bit better.
M: Okay, so for you it's kind of camaraderie.
R: Yeah.

## Segment D: Suburban 2; July 12, 2022

M: Is that fair to say when I go out to the nationals game, even though they think this year, you know feel a sense of connection to the other people sitting around you?
R: Exactly.
M: Okay. So Paul, any thoughts about this issue of people?
R: It depends on what I'm doing. If I'm going out and in a kayak and I just want to enjoy nature, then the fewer people the better. If I'm looking for that trophy fish, then I don't want to share my locations with everyone. But it is nice to have at least some people on the water for safety. And so I think that in many cases you can with a few people, some people out there, you can have the best devotional world. So if it's a parking lot, then why bother going in the water? You can just get into a traffic jam and enjoy yourself as much because you get in the same attitudes as you would have on shore.
R: Exactly.
M: Okay, well that brings, that's a nice segue to our issue of parking and access to transit lines or bike paths or whatever, meaning transportation links. And so what do you all think about that? How much parking is the right amount of parking? Does too much parking distract from the natural experience? Do you want big wide parking birth so that you have plenty of room? I mean, what are your thoughts about all this?
R: Oh, l'd like there to be a fair amount of parking so that when you get there, you don't find yourself running around hoping you'll find a parking place. So adequate parking, but it could be set back somewhat from the actual water area so that it doesn't intrude, if you will.
R: And you've got to watch out. You got to have certain types of parking, you got to have regular car parking. And if it's a boat lunch, you got to have a place where people can park their vehicles and their trailers. I mean at Columbia Island Marina, that's the marina down north of the 14th Street Bridge near the Pentagon that the company I worked for ran, we had both types of parking. When you came in, if you were going to go to your boat at the marina, there was certain parking and if you were bringing in a boat that you wanted to launch, there was another place to park and it could get rather crowded on the weekends, because we used to ride our motorcycles down there to watch the boats go out.
M: So let's go to the next issue. Trash cans and recycling bins. What are our thoughts about needing them? Not wanting them, wanting a lot of them. How are we feeling about the presence of trash cans and recycling bins in these water?
R: You got to have trash cans because otherwise people are going to throw their trash wherever they feel like.
R: Yeah, absolutely.
R: Let's be honest people, some people are basically slobs and they have no respect for other people's property.
M: Well let me ask about yourself though. I mean, what's your need or desire for trash cans.
R: Well, you've got to have enough trash cans. Especially you're going to have a busy weekend. If it's a nice day and it's nice and sunny and people are going to be out, you got to have enough trash and you're going to have employees to come around and empty it when they get full, because otherwise people keep putting trash in it.
M: What do other people think about this?
R: You need lots of dispensers with plastic bags for people to pick up the poop after their dogs. I mean, that's a big one.
M: It is.
R: I definitely would want trash cans and also recycling bins because that is a reminder when you are, this water that you were on, the idea of recycling brings to mind the idea of the water should not be polluted and so forth so that it's part of the same philosophy in words. Recycling kind of connects with the idea of not putting trash or pollutants into the water.
M: Okay. Kevin, any thoughts about trash cans, recycling bins?
R: Like everybody said, there needs to be enough there so people can have easy access to them. And especially recycling bins because otherwise the trash is going to be into the water or somewhere where it doesn't need to be. But definitely. And they also, like the Donald said, they need to have emptied on a regular basis because if they get overflowing, they're just going to be a mess.
R: Oh yeah, l've seen that.
$R$ : That's terrible.
R: And the idea of having lit stations for your dog is excellent too. I don't see that very often and pretty much any park that I go into. And there's people that do a lot, take their dogs out along the trails all the time and unfortunately don't always clean up after themselves. So they figure they're out in nature. They don't need to, but that's not the case.

## Segment D: Suburban 2; July 12, 2022

M: Okay. What about this next one, having somebody there to, it says to give you help. I mean the type of help might be advice on an activity or a nice trail to take or something like that. Or it might be more of an assistance in case you get into some kind of difficulty, but a park ranger or somebody like that, how important is that at these, at water access sites?
R: It depends on where you're at. I can see having a park ranger on a C\&O canal because they can give you information about the canal. I can see having one up the great balls for the same deal. But other parts, no, I don't think so. Especially on the Bay. We couldn't afford all the park rangers.
M: $\quad$ All right, Paul, I see you're lit up there. Anything you want to say on this?
R: Well, I was actually thinking that electronic signage is something that wouldn't be that expensive, but it could provide some guides weather coming in, you're experiencing right now, so that some of the boaters that may not be as experienced and didn't check, aren't caught with their pants down, so to speak.
M: That's an interesting idea on the weather radar or weather alerts for boaters. That's a great idea.
R: And if you're talking about Steve, if you're talking about trails along the waterways and associated the rangers can be a source of information or you can make sure you've got trail maps that people can pick up so they can orient themselves on where they're going and how the trails branched.
M: So the next two bullets we can take is sort of a unit, but you've got availability of things like life jackets or how-to information et cetera. And also equipment that you could either rent or borrow like kayaks, canoes, fishing poles, and so on and so forth.
R: So in my opinion, water safety and comfort. Things like availability of life jackets, how to boat or boating safety tips. You should already know that stuff because you to be taking the Coast Guard courses when you purchase a boat.
M: Well, but a lot of people that are coming are not boat owners. They might be-
R: Well they shouldn't be renting them a boat.
M: Well, I mean maybe they're going out in a kayak or maybe they're, they've never paddled in-
R: Oh kayak. Well, if you're going to go out in a kayak, you're renting a kayak, it should be coming with a life jacket. Fishing poles, I can see running fishing poles, that next thing you know you're going to be calling 911. Somebody's got a fishing lure through their finger.
M: I'll be right back, I got a dog issue, one second.
R: You're bringing too much professional expertise to bear here.
M: Yeah, sorry. Dogs are nervous. So what do other people think about this availability of things like life jackets, et cetera, or actual kayaks or fishing poles or whatever? Is this a plus?
R: Definitely. I think it would be definitely be a plus. And I think they could be run out at low cost. I don't think they should be free because obviously there would be upkeep and maintenance on that equipment and somehow that's going to have to be covered. So if they could be run out at a low cost, I think people would be willing to do that. I know I haven't been on a canoe for a long time and I would love to go on a canoe, but yeah, I think those, that thing that just even having life jacket, it's like I don't own a boat, but my wife's sister or brother has one. But when we have friends, when we invite friends out, sometimes they come and they're not prepared and they don't have a life jacket, so you have to find it somewhere. So if they would have it available at the park or wherever you're launching at, that would definitely be helpful.
M: Okay. I agree.
R: I thought that the only things you can safely rent to people with no experience or rowboats, they're stable. They generally don't tip over and the oars are locked in so that in fact they don't need a lot of instruction on how to propel themselves with it. These new kayaks are much more difficult. Well, I don't know about kayaks, but certainly I know enough about canoes that I mean-
R: Okay, when you talk about canoes and stuff like that, many, many years ago they used to rent canoes down on a title basis. Now it's paddle boats. And I took my girlfriend at that time down there and we were out in a canoe and she decided to stand up.
R: Oh.
M: $\quad$ Not for long.
R: $\quad$ No, I got a new girlfriend after that day.
R: I hope she didn't drown.
R: No, there was no fun.
M: Well, so we were just up in the Thousand Islands and we had a kayaking expedition where they took eight of us in four tandem kayaks and there was a guide along with us. I mean there are things like that where you could be guided even if you have little experience in something. So all of these things are possible. I'm

Segment D: Suburban 2; July 12, 2022
curious, as you look up and down this list, which things here are make or break? If there were a park ranger or if there were the kayak rental or if whatever on this list existed at the site that's near you, would that make you more likely to go there? What are the especially important items on this list?
R: I think really it's a question of the stage of your family. If you have kids around, renting robots, renting kayaks are a great thing to do because you're always looking around for things that are entertaining for the kids and you want to introduce them to the outdoors. No little kids around. I mean, I don't think I go out of my way to rent a boat or row boat or anything.
M: Okay. Yeah.
R: I like the idea of the [inaudible 01:32:01] rented or borrowed equipment because that gives you more things that you can do other than just to say, hike around and enjoy the water. But obviously with the boating and the other equipment and fishing poles, there's lots of options.
M: Yeah. And Donald, would you appreciate having the park ranger there to tell you how to use the equipment? Or do you not need that?
R: I think that would be great, yes. Especially if you have a park ranger who's knowledgeable about the area. Maybe even knows a little bit of the history, how this area went from being totally water and land to the facilities and stuff that it has now and how that all developed.
M: Okay. Anybody else have any items on the list that are particularly jumping out at you?
R: They're... REI runs lots of courses from basic introductory courses for anything you want to do outside up through much more expert levels. Maybe the solution is to hook up potential users with services that are out there providing that kind of training. I mean, one of the things about REI is a co-op... Now a big for profit company. It's supposed to serve its members and maybe the solution is to provide more of a link between these, what's available out there in terms of nature and the ability to get training from organizations like REI.
M: Okay. Yeah, that's a great idea. Absolutely.
R: $\quad$ But by the way, I want to go back just one second to the question about bike path. The area around Washington is so congested. I will not ride a bike out on public road any longer. I mean, l'll go down Rock Creek Park, I'll go down the trails, et cetera, but l'm not going to fight cars for the right of way. It's just too dangerous. And the more bike paths that you have around these places, the more attractive it becomes. And around the city, there are all these bike rental installations you can plug in your card, pick up a bike and leave it wherever you want. And having more trails and also having the ability to rent bikes, I think is really nice.
M: Yep. Yeah, that sounds great. Okay, I'm going to move us forward as we begin to work towards wrapping up our conversation, but we're going to do another... Did we get two of these statements, I think, to cover before we get to the last section. I want to do more to help make local creeks, rivers, and lakes healthier. So what do you all think about that one? I want to do more, so this is not a soft... No, sure. But is there a kind of a drive that anybody's feeling who's here I want to do more?
R: I'd say somewhat agree. Go strongly agree, would say to me, I really pitch in and do a whole lot. I'm not sure I'm up to that, but certainly I somewhat agree that I'd be willing to do some things. In fact, we were at a dog training course and a random lady who's involved in that sort of thing, she came your card and I want to get in touch with her and find out some way I could be involved in this sort of thing.
M: What are some of the things that people could do? Do you have a sense of what you could do that you're not doing today?
R: I think that you need to turn it into a social event. And I've never seen a park area that couldn't benefit from people coming out and cleaning up trash and cutting back brush and usual maintenance stuff. I mean, I did a number of Habitat for Humanity builds, but I got into it because for a number of years I thought, "Gee, that's something nice to do." And then I wound up working with some people who were doing it. And it's a social event. If you want to get people involved in helping to do clean up and reconstructing and building stuff, you can do it if it's part of a sort of social network social experience.
R: Yeah, I agree. That really draws folks in and they feel, "Gee, there's other people like me that are interested in doing things for the public good."
M: Okay. So let me throw an idea. What if the public good were improving the local public water access site near you, building a second boat launch or putting in some benches or barbecue grills or just cleaning up the trash? I mean, is that the kind of thing that people would be willing to do?
R: $\quad$ Yes. But let me just say the reason why the Habitat for Humanity Builds work, is they have professional lead carpenters on site who tell you what to do to make sure that the house is right.
M: Right.
R: Got it. Yeah.

## Segment D: Suburban 2; July 12, 2022

M: That's an important point. Okay, let me move to the next one here. My actions contribute to water pollution where I live.
R: Hey, I flush the toilet.
M: $\quad$ So is that a yes?
R: Disagree.
M: Disagree. Bob disagrees.
R: Bob disagrees.
R: I don't have that much. My actions don't contribute to water pollution where I leave. I don't boat, so I'm not putting gasoline in the water, that sort of thing. I mean, they had a fuel spill at a marina around here, the last couple days. Wasn't much. It was only 30 gallons, but they still had to clean it up.
R: I lean to somewhat disagree. We have store grains in our neighborhood which I'm sure end up in the Chesapeake Bay. And for the weed problems around in our lawns, I was using chemicals to kill the weeds. But I'm happy to say my wife just bought this... It's actually a rufus torch, shoots out a huge flame and what we're doing is burning the weeds to kill them.
M: Okay.
R: But for what?
M: Don't set your grass on fire now, Donald.
R: Well, yeah.
R: Don't burn your house down.
$\mathbf{R}$ : $\quad$ And I have the holes at the ready.
R: Montgomery County just outlawed the use of a number of chemicals and fertilizers. When the residue got washed into the bay, it went through the storm sewer system. It was problematic. And interestingly enough, cost, I assume all the stores I wrote saw out at Costco. They're caring wheat killers and grass killers and fertilizer and stuff, all of which satisfy the standards established by the statute that basically outlawed most of the stuff we had been using.
M: The State of Maryland's got some pretty tough laws in general. And Montgomery County's done something stronger? Sounds like.
R: Yeah. Yeah.
R: I assume it's... My understanding is just Montgomery County, but what is going to a Montgomery County Ordinance, not to a state ordinance.
R: On the state. It's strictly Montgomery County.
R: Yeah.
R: PG County doesn't have it and [inaudible 01:40:33] doesn't either.
M: Well, the state's got some pretty strict limits on fertilizers and what can be used on that. That's been in place for a while. Does anybody else besides Bob disagree with this? Which is fine. Lots of people disagree with this. Is anybody else disagree?
R: I strongly disagree over here.
M: You'd strongly disagree, Liz. Okay, tell me about that. Tell me about that.
R: Yeah. I mean, I'm a nature person, so I do whatever I can to not pollute the environment. Yeah, I mean, I kayak, I don't motorboat, so that's one thing. I'm very anti chemical, I'm on public sewer here, so I don't have a septic tank. So worry about, and I don't flush things down the toilet that you shouldn't. But yeah, I do whatever I can.
M: Okay. All right. So this little statement here, "My actions contribute", and the previous one, "I want to do more", lead us into our last little section. I'm going to stop sharing and we've only got 15 minutes or less. To wrap things up. I just want to kind of bring this down into a final quick little section. l'll just share with you that one of the hypotheses of some of the people that are sponsoring this work, people that want residents to have more access to the water, the Chesapeake Bay Agreement, which governs a lot of the work that's being done to clean up the Chesapeake Bay and its tributaries, has a specific goal around increasing access to the water so that residents get a chance to come in contact with the water that we all love.
And the theory that drives that, besides just wanting to give recreational and emotional benefits to the public, is also that it's thought, and I don't know if this is true, this is why we're talking. It's thought that if people have more access to the water, they're going to care more about the water and that will translate into doing things in their personal life like Liz just described. So is it true... I mean, this hypothesis that if we give people more access to water, that they will care more about the water and therefore they'll do different things in their personal lives to try to help, like picking up dog poop. That's a great example. If you have a dog, that's

## Segment D: Suburban 2; July 12, 2022

a simple thing you can do. It's lots of people don't do it. And so if I bring people in contact with water through one of these public access water sites, will some light bulb go off and they'll be like, "Oh my gosh, l've got to start picking up after my dog because there's bacteria washing off into the water."
What do you think about that? I mean, what do you all think about that hypothesis? Is it true? Does it describe you? If you think about your own life and the whole arc of your life and the contact you've had with the outdoors, has that bred any kind of an ethic in you? Or is it immaterial? Do people either care or don't care about the water? How is that?
R: I think it does have a connection. When I was a science teacher, I went on a weekend trip with other teachers to Tilghman Island, which was sponsored by the Chesapeake Bay Foundation. And it was an enormous experience seeing that little island community and the waterman, which is a Maryland term. But having more connections to the water is going to make you think. For instance, this places where there's stencil over storm drains, this goes to the Chesapeake Bay. People will think more about that stuff and say, "Yeah, maybe I shouldn't put all this crap on my lawn that's going to wash into the bay."
M: Okay, yep. What do other people think?
R: Yeah, I agree. I think it definitely is important. And to have more people access the water, because I think they would learn to appreciate it more. And when you appreciate something, you want to take care of it more. So if more people could get outdoors and not just get on the water, but even just walk the trails or bike the trails and learn to appreciate more of what Mother Nature has to give us. I think more people would care about taking care of it.
M: Part of what I wonder about that, because intuitively that feels right to me as well, Kevin. I think part of what I wonder about that is what sort of help do people need? People might need a little education or they might need a little bit of... What? Social pressure or some... Yeah. Go ahead.
R: You're getting to a point that I was going to make, I think, which is, it's people who don't have as part of their experience. As a general rule, and I can take advantage of whatever physical facilities that you provide to provide greater access to the water. You have to couple physical facilities that support greater access with all sorts of social programs. It's like when I grew up, everybody was in the Boy Scouts, and we learned all sorts of things about camping and nature and doing. And so liking being outdoors was part of what we learned and probably what stuck with us longer and more strongly than anything in terms of the specific skills. And I think if you're talking about kids growing up in urban areas where they have very little access in terms of their life to nature in the outdoors, you have to have some kind of a socialization program, organizations activities that get them involved or the access points won't be used.
M: Okay. So can you draw that out for us a little bit more? How would that look? How would you design such a thing?
R: Well, I think when Donald was talking about when he was teaching, going to Tilghman Island. I mean, I think the states involved in this compact should build into the science courses and the school courses, outdoor experiences so that these kids when they're growing up, if their families have no history of taking advantage of the outdoors, the kids aren't going to get it at home. And so the school is the alternative.
M: Okay.
R: Look at the group of people who are part of this collective, this seven. All highly educated. And the education aspect is one of the things that's lacking in regard to an appreciation of the environment for many of the disenfranchised or the largely inner city kids that you're talking about. And so that has to be developed in order to move things forward. That idea of the electronic signage, for instance, is where you have flashing messages that you cannot afford to have a park ranger at every site. You've got to try a variety of ways to plant some embers and hope that you get a fire with regard to their buying into environmental awareness.
M: I muted again. So Paul, you probably thought a lot about this in your career and in your life. I'm just curious what you would do. So how do you create those embers in people?
R: We had a program where we had a licensed boat captain go around to different schools offering basically both hands on in the school, but also opportunities for the teachers to bring their students out to the environment and actually experience that. The fourth grade, fifth grade were about the best students that we found to try to do that. By high school, it was too late for many of them to really show the same level of pre and post exposure response. So I think having... One of the problems of course is education system is set up to do well on standardized tests. It's not designed, have an awareness of the environment. In most of the education programs that I'm aware of, even in Maryland. And it's something that I think is an important step to try to reinstall in the teaching system, the education system for particularly the younger kids.
R: Yeah. The Chesapeake Bay Foundation does have programs that connect teachers as when I went to Tomman Island to connect teachers to the science of the Chesapeake Bay and so forth. And the hope is that teachers will carry that back to their students. And particularly as you said in the younger grades, educate kids about the bay and all the things that go into it. I remember-

## Segment D: Suburban 2; July 12, 2022

R: I'm sorry. One day on the water is enough typically to open minds, and in some cases just teaching teachers to relay their experience is not going to have the same output. It's getting them out where they actually experience it themselves and have something to bring home.
R: Yes.
M: Well, okay, so I agree that younger kids will be more impressionable and probably will be opened up much more quickly than older kids or adults. But l'm just hoping that we're not writing off the adult population, so what do we do there?
R: I'm about the older adults, but if you're dealing with school age kids, by the way, and I think what you need is age appropriate programs and activities for each age group. [inaudible 01:52:19] school, middle school, high school, et cetera. But if you want to get adults interested, get their kids interested to the school program so they go home and they pester their parents and say, "I want to do this, I want to do that." Then you'll get some adults involved.
R: Well said Allan.
M: Yeah, no, I agreed. I mean, there's no doubt parents will follow their kids and I think all of us who have been parents in our lives certainly can attest to that personally. But what about the rest of the adults out there or older adults or whatever? What are our thoughts about that?
R: We're a lost cause.
M: No, come on. I don't accept that. Liz, you're a very active outdoors person. How did that happen to you? What was it that got you there in terms of your love of the outdoors?
R: I grew up with parents who were always outside, especially my dad. My dad was always very active. He rode bikes and boat and fish and he's basically the one that always had me outdoors. And that's just continued on through my life. And I think also just living here since I live near the Inland Bays and I live near all these parks, that promotes it as well and encourages it and it's encouraged me to take up even more hobbies outdoors.
M: Let me ask you a question, Liz. I mean, it sounds like you've been all over the region in terms of being out in the water and in parks and such. And I just wonder if you've seen things that are educational or otherwise would be persuasive for people that are maybe not coming from a lifelong appreciation of the outdoors like you have. I mean, what have you encountered or seen that would be a real positive that should be replicated elsewhere?
R: One park that I visit, it's Delaware Seashore Fresh Pond. They have put up signs to educate people about certain landmarks there, and even explained why the certain body of water is brackish. It's pretty neat. And I've seen people stop and read them and even kids talking to their parents about them. I like that idea a lot that it's kind of like somewhat of a guided tour and you can stop and read about the history of the park and the waterways.
M: Yeah, that sounds cool. Has anybody else ever seen anything that impresses you in that way?
R: Yeah, the signage. If you go to Great Falls, there's a trail that goes out over an island, and there's a lot of very delicate plants that are sort of rare and protected, et cetera. It's like a boardwalk and the signage along that is really outstanding in terms of pictures of everything that's growing there and the history of it and where it's from. I mean, that kind of signage is really valuable.
M: Yeah. Okay. Well listen, it's 9:30. I've kept you for the full two hours. I want to let you go. I don't have any more questions for you. I'm wondering if there's any final... Has this conversation sparked any additional thoughts on anybody that you want to make sure to leave on the page before we all say goodnight?
R: $\quad$ No, I think you did a great job. I mean I found it a really interesting discussion and it certainly got me thinking about this whole issue in a somewhat different, more expansive way.
M: Great.
R: Agreed.
R: Yeah.
M: Thank you.
R: Absolutely.
M: Good. All right, well, you've all got my email address because it's connected to the invitation that you received. So if you have any further thoughts and want to convey them, don't hesitate to do that. And look at your email inbox a little bit later tonight and you'll have the 100 or who was it? Alan? Who got the early bird 150.

R: Yeah.

Segment D: Suburban 2; July 12, 2022
M: Anyway, that'll be waiting for you shortly. Make sure to check your junk folder if you need to, because sometimes they land there. But anyway, it'll be there and if somehow it's not there, just notify me. But it will be sent within the next hour. So thanks for all your time and your great thoughts tonight. It's been a pleasure.
R: $\quad$ Thanks folks.
R: Thank you so much.
R: Goodnight.
R: Thanks guys.
M: Thanks everybody.
R: $\quad$ Nice meeting everybody.
R: Same here.

## Segment E: Rural 1, Low-income; July 12, 2022

Moderator: Okay. We are recording. What I'm going to do is find out how important or not water is to you. Can you tell me about what it's like to be near water or to visit a public water access site? I'm not talking about the ocean. I'm talking about where you can put in either with a kayak or a boat or start swimming into a lake, a river or stream. Tell me about the public access sites near you.
Respondent: Well, there's a pond where people go and put their boat in the water. They get in the boat and they go riding on the boat and visiting different sites in the water [inaudible 00:01:02] the mountains.
$\mathbf{M}$ : Can you tell me where it is near to you and what it is that you like about it?
R: Well, I don't know the exact area because I just moved to Binghamton, New York a few years ago. So I'm still new to this area.
M: So you don't know where the public access sites are yet?
R: No, not yet.
M: Okay. And then for the other people in the group then, do you know where the public access sites are for you? Hello? Is there anybody else on the group?
$\mathbf{R}$ : Yes.
M: Tell me about the public access sites near you.
R: We have a closer river in here that people go kayaking and some other people go fishing. Some little adventures in the water closer to us here.
M: $\quad$ So where is that put-in site for you? Where is that public access site for you?
R: I think in Shamokin down here in the Pennsylvania area.
M: $\quad$ Have you been there?
R: We just only pass by, drive from the bridge. Go somewhere, wherever we're going to go. We just only see it in the bridge.
M: Have you been to the public access site or no?
R: Pardon?
M: [inaudible 00:02:42] been to the public access site?
R: You're a little breaking.
M: I'm going to sign off and sign back in because apparently my audio is like that. Can you tell me though, before I sign off, have you been to the public access site?
$\mathbf{R}$ : I can't really understand this. Your voice is breaking really.
M: Okay.
R: Maybe I need to get some headset so I can heard it pretty good. Wait a second.
M: Can you hear me okay?
R: Yes.
M: Okay.
R: [inaudible 00:03:38] still breaking a little.
$\mathbf{M}$ : Why don't you [inaudible 00:03:42] and sign back in again?
Steve: Kathy, I think the problem is on your end. Why don't you go ahead and sign out and sign back in. Everybody else is clear. So just you go back out and come back in and then let's the rest of us just stay here until Kathy gets back.
R: Okay. Do I need to leave?
Steve: No, you don't need to leave. Hi, this is Steve. I was communicating with you on... I know we're off to a bad start here. So Kathy's our moderator. She'll be back. She just was having some connection problems, but you guys are good. So just stay put and she'll be back in a minute and then you can get started. Sorry about the rough start.
R: It's okay.
Steve: Just sit tight and she'll be right back hopefully.
$\mathbf{R}$ : [inaudible 00:04:48] three of us in here?
Steve: Rebecca, you're in Binghamton? Is that what you said?
R: Yes. Upstate New York.
Steve: Yeah. And Jessica, where are you? Oh, now I can't hear you.
R: $\quad$ Sorry. [inaudible 00:05:22].

## Segment E: Rural 1, Low-income; July 12, 2022

$\mathbf{R}$ : She had it on mute.
Steve: Oh, okay.
R: Sorry. I'm from Pennsylvania.
Steve: Pennsylvania. Where are you in Pennsylvania?
R: Williamsport area.
Steve: Oh. Williamsport.
R: Lycoming County.
Steve: Okay. Sounds good. Rebecca, do you live right in Binghamton City proper or outside of it or where do you live?
R: Close to Broome County [inaudible 00:05:50] on Cochran Avenue.
Steve: Okay. Right. And Jessica, you live outside of Williamsport or right in the town?
R: Outside Williamsport. I'm in Watsontown. Nobody knows where is that. Mostly they're knowing about Williamsport area. They're a big city or more big building, whatever.
Steve: All right. Well, l'll get us started while Kathy's trying to reconnect. So we like to start by having people tell us a little picture of their life. What's a typical day for you? And as you're going through that day, what are you thinking about? What kind of challenges do you have? What are you hoping for? So Rebecca, talk to us just about a typical day in your life.
$\mathbf{R}$ : Well, a typical day is just to relax and visit family and spend time with my cousins and everything.
Steve: Okay. And what do you do when you get together with family?
R: Have a cookout, go swimming and play different card games and stuff like that.
Steve: That sounds fun. And so what is worrying you in your life? What do you think about and find yourself worrying about?
R: $\quad$ How to get more income on the side.
Steve: Okay. That's a problem a lot of people are thinking about these days, right?
R: Yeah. Yeah.
Steve: All right. And what are you hoping for? What gives you happiness?
$\mathbf{R}$ : Just being alive.
Steve: Being alive.
R: Yes.
Steve: Yeah. Well, yeah. We can praise God for every day that we have, right?
R: Yes.
Steve: Yeah. Jessica, how about you? Will you talk to us about a typical day in your life? What happens? You get up, what happens next? What happens next? And what are you thinking about while you're walking through your day?
R: $\quad$ For me, it's easy day [inaudible 00:08:17]. I just do work over here just helping my husband/ and if we have time, we go out, some friends meet up, some park. Mostly work in the house. That's all my typical day in here.
Steve: What kind of work?
R: [inaudible 00:08:40] really excited.
Steve: Nothing exciting? Well, what kind of work do you and your husband do?
$\mathbf{R}$ : My husband is plumbing, so I help a little bit. I have a little knowledge about. Just little. That's all.
Steve: Did you say plumbing?
R: Yeah.
Steve: Oh, okay. That's good. So what worries you in your day to day life?
R: Worried about for me, the higher price that we have now in our economy. If we can afford whatever that we want to buy, that's make me worried or maybe health wise, that's one of the reasons to get more worried.
Steve: Right. And what brings you satisfaction?
R: Healthy life. And see my family, friends, I think.
$\mathbf{M}$ : Is this better?
Steve: That sounds better, Kathy. And we can see you too.

## Segment E: Rural 1, Low-income; July 12, 2022

M: It looks like I'm in prison. There's a shadow on my face. Well, thank you very much for your patience. I apologize. How are you?
R: I'm fine.
R: I'm doing good.
M: Can we start over? My name is Kathy. I'm a focus group moderator. We're going to be talking about public access for water. And if you love that idea, that's great. If you don't love it, if you hate that idea, that's great too. I am going to ask you that you be as forthcoming as you can. Can we just please start over? Let me ask you about the importance of water for recreation in your life. Rebecca, what's the importance of water for recreation in your life?
R: $\quad$ For people to go swimming and fishing.
M: Not people. Just you.
$\mathbf{R}$ : Oh. For me to go swimming or just see the ducks swimming in the water.
$\mathbf{M}$ : When was the last time you were in or near the water?
R: It's been a while.
$\mathbf{M}$ : $\quad$ How long is a while?
R: $\quad$ Maybe about five years ago.
$\mathbf{M}$ : $\quad$ So you haven't been swimming in five years?
R: Yes.
$\mathbf{M}$ : How long has it been since you've walked along the water? Or sat.
$\mathbf{R}$ : I sat by the water three days ago.
$\mathbf{M}$ : $\quad$ And what is your first name? Is it Jessica?
R: Yes, I'm Jessica.
$\mathbf{M}$ : Jessica. How important or not is water for recreation for you?
R: Water for me, it's very nice to have closer to your place because every time that you want to go, you can easily access and enjoy yourself in the nice weather and the water. For me, water is very important.
M: How long ago were you near or in the water?
$\mathbf{R}$ : Lake or in the beach? [inaudible 00:12:00].
$\mathbf{M}$ : Which one? How long ago was it when you were near the water?
R: Two years ago we went to Florida in the beach in Sarasota. It's pretty nice there. We get nice warm water in there too.
$\mathbf{M}$ : And how about near you?
R: Here in close to us, maybe a week ago, I think. Yeah, a week ago. Because we have a carnival in here and we have closer to the water.
M: Rebecca, can you tell me what feelings you were having when you were sitting near the water?
$\mathbf{R}$ : I was having good feelings. I wish I could jump in the water and start swimming and see how far I could swim.
M: What made you not jump in?
$\mathbf{R}$ : Well, the town that I live in, the water right next to where I live at is contaminated so they don't allow people to go in that water.
M: So were you with friends and family? Tell me a little bit about the ambiance when you were sitting near the water.
R: I was by myself.
M: Okay. And Jessica, don't go off and on mute, just keep on. Thank you, Jessica. No need to go on mute. So Jessica, tell me how many people there were with you and what the mood was when you were near the water last time.
R: Just few people over there. Because some people go kayaking. I didn't [inaudible 00:13:48].
M: [inaudible 00:13:49]. How were you feeling when you were near the water?
R: Oh, it feels good because water feels when you're in your skin, it's really nice to have. Because we have four season, just only summer that you can get, or more warmer days. It's a very nice feeling to be in the water.
$\mathbf{M}$ : $\quad$ And were you in the water this last time?
R: Yeah. Just only in my feet just walking a little bit in the shore and not really in the deep area.

## Segment E: Rural 1, Low-income; July 12, 2022

M: And how far was that spot from your home?
R: $\quad 15$ minutes drive, I think.
M: Okay. Doesn't sound like you guys are very connected to the water. Do I have that correct?
R: Yes.
M: It sounds like you have good ideas about the water but don't seek out very frequently. Am I right or wrong about that?
R: Yes.
M: Rebecca, what would make you go to the water more often?
R: To just sit there and think about different things that's going on in the world and clear my head.
$\mathbf{M}$ : What would make you do that more often? Or what would help make it easier for you to do that more often?
R: If the weather was hot every day of the year.
M: I see. Jessica, what would make you want to go to the water more often?
R: In the hot days. [inaudible 00:15:44] your pretty good feeling in your body if you're in water in the hot days, in the summer day mostly. People go jump in the water in the summer days. It's really feel great.
M: Is there anything about that location that would make it easier for you to go to or more present in your mind? Like, "Oh, I'll go to that water today." Is there anything about that specific location that would make it more appealing or easier to access?
R: I think yeah, easy to go [inaudible 00:16:23]. Mostly it's not really often people go over this area swimming in our water mostly.
M: I'm not interested in people. I just want you, Jessica, and you, Rebecca, nobody else. By the way, you, Jessica [inaudible 00:16:42], there was a 50 dollar early bird reward for being on time, unlike me. Who has an eight in their address? Who has an eight in their address?
R: $\quad$ No.
R: No.
M: No? Okay.
R: You said an eight?
M: Yeah. Who has an eight in their address?
R: Me.
M: You won the early bird, Rebecca.
R: Oh wow. Thank you.
M: Very good. You guys speak about water in the theoretical way. Can you share your latest memory of what it was like to be near the water for me?
$\mathbf{R}$ : Well, when I was a kid I used to have a swimming pool in the backyard and I used to go in the swimming pool with my brothers and sisters and we used to take the bucket and put the water in it and pour it on each other and the water was nice and cold too.
M: Yeah. And what about that feeling? Do you wish were still possible for you today?
R: If my sisters and brother was living nearby me and we all go to the beach together and go swimming in the water like a family picnic again.
M: And Jessica, can you share a memory with me about water?
R: My memory for to go in water, I like to go in the water because I didn't know how to swim. I'm going to try to go as possible to the water so I can do a little bit swimming.
M: Okay. So I want to understand about public access for you. Can you describe where you go now, where you see people going in with the boat or wading in, how far is that from your house and how inviting or not is that area? Rebecca, how far away is the public access from you and how inviting or not is that spot?
R: Well, it's in another town. Not in the area where I live at. It's in another part of upstate New York so I don't really know the area. [inaudible 00:19:22]. Maybe about two or three hour ride.
M: So there's no [inaudible 00:19:28] into the water near you?
R: No.
M: There's no creek or no river, nobody does any boating, nothing?
R: It's a creek but nobody can't ride a boat or anything in it.
M: Huh. Okay. And Jessica, how far away is the public access from you?
$\mathbf{R}$ : $\quad 15$ minutes drive in the town.

## Segment E: Rural 1, Low-income; July 12, 2022

M: And can you describe that public access site to me?
R: Just closer to the road and you can easily access in there. They have a boat area also that you can access their boat to the water and they also have an area where people can get in the water.
M: And what is it like when you're there? What does it feel like? What is the mood or what is the vibe when you're there?
R: It's a nice feeling to be closer in that place. It's feels like the water's calling you to go in if the weather's really warm. And any time that you can access the area to go through it, in that public place, that easy to go swimming, go kayaking in our area here.
M: I thought you couldn't swim.
R: Yeah. I can't swim but I can easily walk through in the closer shore. I'm not going to go in deeper area because I'm scared to death to be in the deeper area.
$\mathbf{M}$ : Has either of you been in a canoe or a kayak?
R: No.
R: No.
M: What is the likelihood of you going into a canoe or kayak?
$\mathbf{R}$ : I wouldn't mind trying it one day.
$\mathbf{R}$ : Yeah, me too. It's a little bit scary.
$\mathbf{M}$ : If you were to take lessons, where would you go to take lessons?
R: I don't know. For me, I don't know. Just maybe my husband can teach me.
M: Okay. Has your outlook on water changed over time? As we get older sometimes our outlook on what we can physically do changes. But I'm wondering if your appreciation of water has changed. I remember my grandmother liking the rain and I never understood why she liked the rain. Now I understand why she likes the rain. Has your appreciation of the water changed over time?
R: $\quad$ No.
R: $\quad$ Not at this point.
M: Okay. When you think of water, what makes you think of water for a recreational activity?
R: [inaudible 00:22:53].
M: Jessica, what would make you go to your public access site? For example, what kind of day is it or what kind of evening is it when you say to yourself, "I'll go to that little public access site"?
R: In the afternoon. Afternoon.
M: Afternoon. And what is it about the afternoon that makes you want to go?
$\mathbf{R}$ : Oh, in the sunny day, hot day, humid day, like to go in the water. It's refreshing to go in there because it's hot and we don't have swimming pool or closer or neighborhood can I go swim. So it's easier for me to go to the public river to go swimming in the hot days and maybe afternoon in humid day.
M: And Rebecca, I wanted ask you. You said that there's a river or a creek near you [inaudible 00:24:02] to go boating. Are you allowed to sit near the water?
R: Yes.
M: Do you have to bring your own chairs?
$\mathbf{R}$ : There's benches out there where you can just sit there and watch the ducks go by in the water.
$\mathbf{M}$ : $\quad$ Are there picnic tables or anything like that?
R: No.
M: Okay. Let's see. Well, for the next few minutes I want to throw out a few statements and get your reaction to them. We're calling this the lightning round. So I want to see how much you agree or disagree or how strongly you feel and why you feel that way. So here comes the first one. [inaudible 00:25:00] on the water makes me feel happier. So pick the answer. You can strongly-
R: Strongly.
R: $\quad$ Strongly agree.
M: [inaudible 00:25:11] just pick the answer and keep it to yourself. Strongly agree, somewhat agree, neutral, somewhat disagree, strongly disagree. Being near on the water makes me feel happier. Jessica, do you have your answer? Don't give it to me, but do you have your answer?
R: Yeah.
M: Rebecca, do you have your answer?

## Segment E: Rural 1, Low-income; July 12, 2022

R: Yes.
M: Okay. Rebecca, what's your answer?
R: $\quad$ Strongly agree.
M: And Jessica, what's your answer?
R: $\quad$ Strongly agree.
M: Okay. So if you tell me what makes you strongly agree with this statement.
R: Just to be able to sit by the water and feel the cool breeze come on your body.
M: Well, that describes what you do. But I could sit near the TV and feel the cool breeze of the air conditioner on my body and feel happier too. What is it about the water that's unique in there?
$\mathbf{R}$ : $\quad$ The ambiance of the view and also the winds blowing in your skin and it's saying all the flows in the waters like calmly. That's make more happier feeling to be closer in the water.
M: What is it about the view that makes you happy?
R: Because you can see some birds, ducks. Some people go kayaking and some people-
R: And fishing.
$\mathbf{R}$ : ... in their boat that do their fishing. That's seeing all those things in the water.
$\mathbf{M}$ : $\quad$ Rebecca, in that spot where you sat the few days ago, were people fishing in that water?
R: $\quad$ Further down, there was because that's where the clean water was.
M: Do you know if there's a public access site further down?
R: $\quad$ Not that I know of.
M: Well, Jessica described a little bit about what makes you feel happier and you said breeze and [inaudible $00: 27: 22$ ] and air conditioning and TV. What is it about being near the water specifically that you want to tell me makes you feel happy?
R: You can put your feet in the water and then you can see the little rocks or different kinds of fishes swimming in the water.
$\mathbf{M}$ : What makes you feel happy when you see little fish in the water?
R: I wish I could be a fish too.
M: I agree. Is there anything else that's unique to the water when you sit near it or wiggle your toes in it? What's unique to that feeling do you think?
$\mathbf{R}$ : $\quad$ Thinking about life.
$\mathbf{R}$ : $\quad$ Thinking about life.
$\mathbf{R}$ : If you are in the problem process, you're thinking calmly in the water, thinking yourself that outcome to surviving, something like that. Also, if you are in the water while your [inaudible] and feel the waters look like some of your problem, stress, you can think wisely and also -
R: $\quad$ And be by yourself.
R: Yeah, and you can think more on how to calm yourself.
$\mathbf{M}$ : $\quad$ So it's an enriching solitude then really?
R: Yes.
M: Well then, let's go to the next statement. When I am in the parks or on trails near the water, I see other people like me. So don't tell me your answer yet. Strongly agree, somewhat agree, neutral, somewhat disagree, strongly disagree. When I'm in the parks or on trails near the water, I see other people like me. Jessica, do you have your answer?
$\mathbf{R}$ : Yes, strongly agree.
M: And Rebecca, do you have your answer?
R: Yes.
M: Rebecca, what's your answer?
R: $\quad$ Strongly agree.
M: Jessica, what's your answer?
R: $\quad$ Strongly agree.
M: You guys agreed again. So Jessica, what makes you strongly agree to this statement? When I'm in the parks or on the trails near the water, I see other people like me.

## Segment E: Rural 1, Low-income; July 12, 2022

$\mathbf{R}$ : I strongly agree about park or on the trails or on the water near me, because while I'm in the trails, you can go walking too and some trees. That one time we went to the trail and we see some falls, some area over there. Then-
M: You saw somewhat?
$\mathbf{R}$ : Local falls, waterfalls.
M: Waterfalls.
R: $\quad$ Then it's amazing that you see those creatures that in the mountain that you see this falls that you never seen, and the water in the park. I didn't see water in the park, just only in the trail, because I went one time in the trail.
M: $\quad$ Thinking of the people when you were there, how true or not is the statement that you were able to [inaudible 00:31:00] other people like you?
R: $\quad$ Say it again. [inaudible 00:31:05]
M: Sure. We're not talking about the trails, we're talking about how frequently you see other people like yourself. For example, if I were to go on a trail, the question would be, are there any other old ladies on this trail? And I [inaudible 00:31:21] I like being with other old ladies. So Rebecca, can you tell me what makes you strongly agree with this statement that you see other people?
R: Well, I see people my age hanging by their self. Then I go over there and sit and talk with them, and we take a walk on a trail in the park and see different leaves that's growing on the tree and the different colors.
$\mathbf{M}$ : You know what, I'm going to ask this question a different way. When you're on the Parson Trails, does it feel like they belong to you?
R: Yes.
M: What makes you say, "This part of nature is mine and I can play in it."?
R: It's a easy way for me to get things off my mind and just walk down the trail.
M: Well, for example, I feel one way when I'm walking in my yard and I feel another way when I'm walking in somebody else's yard. It sounds like you feel like in your own backyard when you're in the public access spot.
R: Yes.
M: What makes that park or trail feel like it belongs to you?
$\mathbf{R}$ : The scenery or how the trees is and the water.
$\mathbf{M}$ : Jessica, when you are on the parks and trails, how often do you see other people like you, that are your age or have families of your size or have-
$\mathbf{R}$ : More on here, it's more on older people.
M: When you go to those public access sites, does it feel like that's your property and you can be there?
R: Yeah.
M: What makes it feel that way to you?
R: Because in the park, sorry, it feels like you're in yourself over there, and when you see some people, they're enjoying what they're doing in there and you're also enjoying yourself looking for them. Also, it's very refreshing mind that you are in the park, that you see people enjoying your life also. You're enjoying your life too while you're in the park.
M: That's true. There's a feed on effect where your people watching. When you see other people having fun, it's easier for you to have fun too. Here, let's go to the next statement. There's convenient access to the water for boating, fishing, or swimming near where I live, strongly agree, somewhat agree, neutral, strongly disagree. I'm sorry, somewhat disagree, strongly disagree. Jessica, can you pick your answer?
R: Strongly... Oh sorry.
$\mathbf{M}$ : No, no, don't tell me your answer, just pick your answer. And then Rebecca, can you pick your answer? Don't tell me. Just can you pick your answer?
R: Yes.
M: There is convenient access to the water for boating, fishing, or swimming near where I live. Jessica, what is your answer?
R: Strongly agree.
$\mathbf{M}$ : And Rebecca, what is your answer?
R: Somewhat agree.

## Segment E: Rural 1, Low-income; July 12, 2022

M: Out of curiosity, Rebecca, if you think that the water is cleaner further down, how far down is further down from where you are?
R: It's in another town.
$\mathbf{M}$ : How far is that other town from you?
R: Maybe about a half an hour away.
M: That's not two to three hours away, it's a half an hour away. So that's [inaudible 00:35:22] Have you ever been there?
R: No, I haven't.
M: What would make you want to go there, do you think?
R: If I had a ride to get there.
$\mathbf{M}$ : Oh, if you had a ride to get there. So if there was a bus, would you go?
R: Yes.
M: All right. Jessica, tell me more about how you strongly agree with this statement. There's convenient access to the water for boating, fishing, or swimming near where I live. In 15 minutes, how many different places can you look at or be in or be near the water?
R: $\quad$ 15. Just only, I seen one access area only in this 15 minutes drive, and there's another 20 minutes drive closer in here also. That can boating, fishing and swimming. Pretty convenient area that were around in my place.
M: When you have those two sites to compare, how do those two sites compare to each other? The public access sites, how do they compare to each other?
R: $\quad$ They look similar for me, because they're closer to the route, same area and 15 minutes and 20 minutes area. They're easily to get in on that place too. You can also go, there's an area that you can walk through on it, then you can fish in there, and there's also an access area to go to park your vehicle on that place. They're both same. You can park your vehicle, you can do your boat, go to the water and there's an area that you can walk and, sorry, there's a fly, and there's an area also that you can go swimming in that place. There's also closer a creek that you can go fishing.
M: Wow.
R: Both same area that it's around us here.
M: Rebecca, for that other spot that's about 30 minutes away, you mentioned that you wish there was a bus that could take you there or a street car or a trolley or a Batman. Is there anything else that you wish about that public access site?
R: $\quad$ That they have more benches where people can sit and fish, like a picnic area for the family.
M: Let's go to the next statement. Features of a public water access site, now give me the list of what you would like. Rebecca, you started that. You want picnic table, benches, family picnic. What else would you like at a public water access site? What are the features that make it agreeable?
R: Maybe a playground for the little kids and maybe a basketball court for the grown men and a swimming area.
M: And Jessica, for you?
R: Because our area, it's in the bank, there's only a certain area that you can go access. For me, in 15 minutes, they have walking area for dogs, then they have trees in it. Then the other one, 20 minutes, they have a football court over there, and there's also a campers in the next one. I don't see any that I can look for because we're in a small town.
M: If you were to make improvements, if you were to add a few things, what are the few things you might add to the public access site to make it more agreeable or more appealing to you?
R: Cut some trees.
$\mathbf{M}$ : $\quad$ Cut some trees. What makes you say that?
R: Because if they cut some trees, there's more expand area to put some beach chair to look for it. And because in our area here, it's more only trees and it's a little bank on the side. But just certain that people can go access only. But if they cut those trees, then they can put some chairs, some picnic area in there. Then there are more people to go sightseeing in the picnic table or in the chair. This just little space to go in. But you can still access in the water if you really want.
M: Well, I want to ask you one thing. For example, we know we can't put in a helicopter pad to start wading in the water. It's not necessary to have a helicopter pad to go fishing. So like the basketball court, is that a deal breaker? Would you go, Rebecca, to a public access water site if there were not a basketball court? Yes or no?

## Segment E: Rural 1, Low-income; July 12, 2022

R: Yes.

M: If there were not a bus, yes or no.
R: $\quad$ No.
M: Let's see. So Rebecca, let's see, what is the make or break? So in order to go to a public water access, is that mandatory to have a basketball court? Yes or no?
R: $\quad$ No.
$\mathbf{M}$ : Is it mandatory to have public transportation?
R: Yes.
M: Is it mandatory to have restrooms?
R: Yes.
$\mathbf{M}$ : Is it mandatory to have a picnic table?
R: Yes.
$\mathbf{M}$ : $\quad$ Is it mandatory to have benches?
R: Yes.
$\mathbf{M}$ : Jessica, is it mandatory to have a place to park your car?
R: Yes.
$\mathbf{M}$ : $\quad$ Is it mandatory to have a view?
R: Yes, of course.
$\mathbf{M}$ : Is it mandatory to have a sink and a fish cleaning area?
R: Yeah.
M: What are the things that are crucial? Is there anything that you can get away with? For example, when I go on a vacation, I don't take three swimming suits because I can get away with one. Is there anything list you can get away with? What's really necessary and what's maybe nice?
R: Oh, a bathroom.
M: Bathroom.
R: That you can change quicker. Not necessary to be wet.
M: All right. Let's look at some images. So I'm going to ask you each for a minute to think about these pictures. Insert yourself into one of these pictures and tell me what you're doing in that picture. Don't start yet, but your picture. Rebecca, do you have a picture that you'd like?
R: Yes.
M: Okay, and Jessica, do you have a picture that you like?
R: Yes.
M: Imagine you are in that picture and prepared to tell me what you think in that picture and how water is important to you in that picture. And l'll give you a minute to imagine that day or that afternoon. Rebecca, which picture did you pick?
R: $\quad$.
M: $\quad$ All right, tell me your day in picture $C$.
R: Well, I'm sitting down on the bench and clearing my mind and just thinking about how beautiful the scenery is and how beautiful the weather, and looking at the clear blue water.
M: That's it?
R: Yes.
M: Well, you didn't tell me about your feelings, you didn't tell me about your toes in the water. You didn't tell me about some of the nice people you met. You didn't tell me about the knitting that you brought. You got to keep up with the stories.
R: I took my shoes off and go stand in the water with my feet, and then I take my hands and put some water on my face, feel the cool water. Then some people come walking past like, "Hey hello, how you doing?" They said, "Would you mind me having a seat?" I'm like sure, and they come sit down and we have talk and we go for a walk on the trail way.
$\mathbf{M}$ : $\quad$ Did you make a new friend?
R: Yes.
$\mathbf{M}$ : Do you have new dinner plans?

## Segment E: Rural 1, Low-income; July 12, 2022

R: Yes, yes.
$\mathbf{M}$ : Did you bring a book, Rebecca?
R: Yes.
M: Did you-
R: I sat on the bench and read a book.
$\mathbf{M}$ : How important or not is that day to you when it comes to the rest of your life or the rest of your week?
R: Makes me feel happy.
M: $\quad$ Tell me how you felt before you got to $C$, and tell me how you felt when you left $C$.
R: Before I left, I was feeling low down, and then when I left, I was happy because I was able to clear my mind.
$\mathbf{M}$ : What time did you get to C and what time did you leave C ?
R: I got to $C$ about two o'clock and I left at seven.
M: [inaudible 00:47:12] You understand the exercise. Tell me which picture you want, when your day starts, who you were with, what you were like before you got there, how the day evolved, the activities, other people and what time you left. So which picture did you pick, Jessica?
$\mathbf{R}$ : $\quad D$, the picture $D$.
M: Describe that picture to me.
R: I choose this picture $D$, because you can have a group and all your friends or family can join the group, do this. It's look like they're planning that adventure to do kayaking in here in the morning. Then we just go through some area.
M: Wait, wait, wait, Jessica, wait, wait, wait. So Jessica, now you're in the picture. Tell me what time you got there and then continue.
R: $\quad$ For me, it's in the morning, 10 in the morning, and gathering everything and saying hi, hello to the friends or family that's in the meeting or in that adventure for do kayaking or whatever. Then do some planning that which area that we are going to go, who's the leader that can guide everyone, go through the water and some guidelines that needed to follow, and also safety first. Need to be life vest or in case if you have phone, just put that in the zip [inaudible 00:49:00] or water [inaudible 00:49:00].
M: Yes.
R: Water proof pouch or whatever to secure, because if there's an emergency, we can call for emergency. Then after all the meetings, guidelines, safety and for sure bring some water because the hot days come or whatever weather that we're thinking, sometimes weather change. If we are like looking for today is the weather for tomorrow, if it's sunny day, so we need to bring some water to dehydrated yourself and if some candies or little chips that you can bring in your kayak. Later, we're going to go, if we can see some restaurant, if that time is at noon, so there's a sign that the [inaudible 00:50:02] maybe some flags. Flags that's saying, "Stop in this area." So-
M: Well, tell me about the water in your day. How important or not is the water? Where did you go, Jessica? Darn it.
R: I can now, I hear you.
M: $\quad$ There you are. So Jessica, tell me about your feelings and tell me what it's like to be near the water when you're with your friends and family and your administrative issues have been addressed.
$\mathbf{R}$ : Oh, exciting to do the kayaking adventure for everyone, and the way the river go, it lead somewhere, whatever, is some ideas showing. Maybe there's some turtle over there that for sure. I didn't see turtle yet in the water, but we didn't expect or reality maybe some turtle that swim that you can see. So there's a sign, oh there's a turtle, take a picture.
M: So you get some experience of the water and some wildlife too. You know what? I didn't ask you anything about the wildlife, Rebecca. Did any of the little fish come and bite your toes?
R: No.
$\mathbf{M}$ : Were there any ducks where you were?
$\mathbf{R}$ : Yes, there were some ducks.
M: And what wildlife did you see when you were, there aside from ducks, Rebecca?
R: Birds.
$\mathbf{M}$ : Foxes?
$\mathbf{R}$ : No foxes.

## Segment E: Rural 1, Low-income; July 12, 2022

M: Let's look at another series of four pictures. I'm going to ask you to do the same exercise. Pick a picture, you can pick the same one. It doesn't have to be a different one. So Jessica, do you have a picture?
R: Yes.
$\mathbf{M}$ : $\quad$ Rebecca, do you have a picture?
R: Yes.
M: Okay, so this time put yourself in it and I want to pretend I'm there with you, and start a conversation or ask me questions about what it's like for me, because maybe I don't have the same amount of experience as you do with that public access site or the water. So why don't you help me understand what the benefit... Help me understand why we're there. So you're going to be the host and l'm going to be your guest in one of these pictures. So figure out how you want to introduce this to me and how you check in with me to make sure I'm okay, and ask me questions about what I am experiencing.
R: Okay.
M: Jessica, do you have a picture?
R: Yes.
M: Okay, so which one is it?
R: I choose E.
M: So I'm your guest. Tell me what's up.
R: We're going to the [inaudible 00:53:17], hoping we can catch some fish, because some season that sometimes you can catch, sometimes not, so you prepare yourself. If you can catch, that's good. If you don't, don't get mad. Then so we can go some area in here that I know that there is a good fish that we can catch. And hoping you enjoy our trip in here, in this fishing building that we need to do today, and hoping we have enough gasoline to make our trip.
M: Why did you pick this site, Jessica? What's so special about this site?
R: This picture E for me is I like to catch fish, and also you just also enjoying the breeze of the water and the winds on your skin. And while feeling that thing, you're still hoping to get or to catch some fish for your dinner or for next meal.
M: That's good. Am I safe here? Am I safe?
R: It's look like you're... Yeah, I think. Probably so.
M: Will my truck... Will your truck be safe?
R: I think maybe the truck is on the breaker. I think we're safe in this picture as long as the boats can go on the water and the truck can park somewhere.
M: Okay. Rebecca, what picture did you pick and where are we going?
R: H.
M: Okay.
R: Okay, we are going on a tour. We have a bunch of kids with us sightseeing. Each one of them have a camera or bag where they could go to an area that have souvenirs, and we could bring souvenirs back home with us. And we walk into different areas of the place where we at, and there's an area where we could sit down and eat and get something to drink, and everybody sit down and talk and tell everybody about the experience of the areas that they went to.
M: Well where did we go on the tour?
R: To see the different birds and the ducks that's swimming in the water, and the different boats that was in the water, too.
M: $\quad$ Rebecca, did we go on the water? Or did we stay on the land?
R: We stayed. We stayed on the land, but we could see all the boats coming down in the water.
M: Okay.
R: Different sizes and everything.
M: Okay. You know what? I'm not going to ask you to... We're going to go back and forth between these eight pictures. There's A, B, C, and D and E, F and G. I want you to look at these pictures and in your mind tell me, as I said before, what's mandatory. For example, you don't need a helicopter to go fishing. So what is mandatory in a public water access spot? What are the absolute basics? Tell me three things that have to be part of every public water access site. Jessica, if you go back to the pictures, A, B, C, D, and even these, what are the three things that have to be available at your public water access site?
R: Guidelines.

## Segment E: Rural 1, Low-income; July 12, 2022

$\mathbf{M}$ : What do you mean by guidelines?
R: $\quad$ They have some guideline, what are you going to do in the water, that posted in the area. The first picture that I choose one, that they have a guidelines in that area that what you can do and you don't do.
$\mathbf{M}$ : Right. Okay. And so posted guidelines. Tell me two more things that are must have that are basic to a public water access site.
$\mathbf{R}$ : Like this picture, letter $J$, this bushes in here?
M: Yeah.
R: $\quad$ Supposed to be posted if deeper or not. So if they have more rocks that you [inaudible 00:59:15].
$\mathbf{M}$ : I see. So you want warnings. You want warnings?
R: Yeah, warnings. Warnings, the water, the area that if you don't need or you can do or not. Maybe some shallow area or more on maybe some wild animals in there that not needed to disturb.
M: Okay. And give me one more basic part, must have for every public water access site. One more.
$\mathbf{R}$ : This boat that I choose one, that letter E.
$\mathbf{M}$ : Yeah?
R: Because you ask me if you are safe in there.
M: Yeah.
R: Then I just look in the picture and I try to zoom it if it's really... There are some protocol that may be how deep that vehicle that you can go through in the water. Sometimes there have oil on your water. So maybe there's some warning also over there, a sign that just certain deep or feet that your vehicle can touch the water so the oil, or whatever that's in your vehicle, not going to spread in the water.
M: We can look at A, B, C, D, and E again. And I'm sorry, A, B, C, and D again. And then F, G, H. Rebecca, what is must have for every public water access site? What's-
$\mathbf{R}$ : $\quad$ A restroom for $B$, a rest area where they could go in there, change to their [inaudible 01:01:14] clothes, and use the bathroom. And G, you need where the walk area is, maybe a gate so nobody wouldn't fall into the water, so they could be safe.
M: Well I'm going to give you another list and I just want you to tell me what would encourage you or discourage you. So for example, we talked about the distance to go to a public water access site and distance became an issue that we talked about with you, Rebecca, that maybe if there were buses.
R: Yeah.
M: Thinking of a public water access site, what would encourage or discourage you? A site being totally free of people. Some people are busy. Which do you prefer here? Jessica, do you want a site being totally free of people? Some people are busy. Which is your preference?
$\mathbf{R}$ : Free of crowded.
M: I'm sorry.
$\mathbf{R}$ : I don't like too many people.
R: Yeah.
$\mathbf{R}$ : I want the area to be less people in the area.
$\mathbf{M}$ : The fewer the people the better. Okay. And Jessica for you?
R: I'm more on busy, some more. Some people busy in the area.
M: Some people. Okay.
R: Yeah.
M: So in order to make both you, Rebecca, and you, Jessica, happy, how many feet have to be in between people for it to be too busy? I mean is... One foot is too close, too crowded. Six feet, crowded maybe. How much room does each person need?
R: About six feet.
$\mathbf{M}$ : Okay. I'm thinking 20, but six feet is okay?
R: Yeah.
R: $\quad 10$ feet for me because sometimes people too noisy, even they're... The way they talk. Sometimes you're talking to your friends or whoever with you in that time. So some other people over there, they're talking too loud. So this sounds wise for me, 10 feet.
M: Okay, so Rebecca, you want... Just checking, and you have to correct me if I make a false assumption. Rebecca, you want to be isolated. You don't want anybody. You don't want hide nor hair or anything?

## Segment E: Rural 1, Low-income; July 12, 2022

R: No.
M: Nothing.
R: $\quad$ Nothing.
M: $\quad$ The bus stop and that's it.
R: Yeah.
$\mathbf{M}$ : $\quad$ And you're not afraid there?
R: No.
M: $\quad$ Right. And Jessica, you want some people there.
R: Yeah.
M: All the time? Some of the time? How busy do you want it to be? Do you want someone there all the time?
R: Yeah, I think this. We're free people to go whatever we want. Then-
M: Let's go to the next one. Presence of parking, access to transit lines or bike path. How will you get there and how far is too far for you? So Rebecca, talk about this.
R: Okay. If it's in another town, that would be far for me to get there, so I would rather take a bus or have somebody drive me there.
M: Well, how far... How long are you willing to ride on the bus?
R: About a half an hour.
M: Okay. And how many times a day does the bus have to go? Or how many days a week?
R: Five days a week.
M: Rebecca, do you have kids or children or nieces and nephews and stuff?
R: I have nieces and nephews.
$\mathbf{M}$ : Would you let them go there by themselves on their bike?
R: No.
M: Would you let them go there by themselves on a bus?
R: No.
M: Jessica, how likely or not would you be to use public transportation if it were near the public access spot that you would like to go to?
$\mathbf{R}$ : We're more on vehicle in here. We drive our self.
M: Okay.
R: We don't have those public transportations because we are small town.
M: Would you like a bus? Would you like there to be a bus that goes to [inaudible 01:06:43] spot or no?
$\mathbf{R}$ : It's okay to have those, but in our area I think it's not needed.
M: Okay.
R: It's easy to access and just only driving distance only 15 minutes.
M: Let's talk about parking. So some people... It sounds like you might need parking. Jessica, how big? How many cars do you need to have parked near a public access site?
$\mathbf{R}$ : 15 minutes drive. We have a big parking lot in here because we have a store that you can, closer, that there's also parking area from the store go to the area that you can get in into the water. They're really pretty good in parking in here.
M: $\quad$ And in any site, what is the minimum number of parking spots? Can you have just one or do you always need 44 ? What is the correct number of parking spots for public access site?
R: $\quad 25$, I think.
M: 25. Rebecca, what is the correct number of parking spots for a public access site?
R: Maybe about 12.
M: Okay, so you guys, I want to ask you a question. What's the difference between a public access site and the public recreation site?
$\mathbf{R}$ : Recreation is more on... Sorry.
R: Yeah.
$\mathbf{R}$ : On kids playing in it? Then recreation's more on for kids.

## Segment E: Rural 1, Low-income; July 12, 2022

M: I don't know. I don't know. I just want to figure out what the difference is for you between a public access site and a public park. Rebecca?
R: A public park is where everybody go hang out, play basketball, play tennis, or they could just sit down and talk with their friends, play cards at the table, or have a little picnic with food and drinks.
M: Jessica, what's the difference between a park and public water access?
R: Park is more on walking some kids, or it's for a kids' area and some people go, some running and walking, over in public park then.
M: Well, a public water access is just an introduction water for you. You can go in with your eyes. You can go in with your feet or you can go in with a boat or kayak. It's not a place to stay. It's a place to pause, but it's not a place to stay. You can pause there the afternoon. You can pause there... The purpose is to be near the water. Okay, but you guys would like bike paths. So your nieces and nephews, Rebecca, would go there?
R: Yes.
$\mathbf{M}$ : Okay. How important are not are the presence of trash cans and recycling bins? What's the basic minimum? Do you have trash cans and recycling bins? Yes or no?
R: Yes.
R: Yes.
M: Now there is a theory. The theory is if you have trash cans, people will put all kinds of trash. If there's no trash cans, people will bring the trash home. What do you think is better?
R: Recycling?
R: Recycling bin where they could put the soda cans with the soda cans, plastic bottles with the plastic bottles.
M: Okay.
$\mathbf{R}$ : And the paper with the paper.
R: Yeah. I agree.
$\mathbf{M}$ : How important or not is it to have someone there to give you help like a park ranger? And when you think of park ranger, what kind of help does a park ranger give you?
R: Directions to where you got to go to. If you go on hiking, they could tell you what trail you could go to and don't go to the wrong trail where you'll be in danger or anything like that.
$\mathbf{M}$ : Okay. Jessica, what does a park ranger do?
R: It's people guide you the way you go through, and also helping you if you have some questions about, and safety protocol also for your vehicle if you're going to park over there in that area.
$\mathbf{M}$ : Okay. What kind of questions does a park ranger answer?
$\mathbf{R}$ : If there's some closer restroom in here, then the park ranger can tell you where is it, the direction that where it's at.
M: If there's a closer what? If there's a closer what?
R: Restroom.
M: Restroom. Okay. Where the restrooms are. What other kinds of questions can a park ranger answer? Rebecca?
R: Where's the closest area to get food.
$\mathbf{M}$ : Okay. How deep the water is?
R: Yeah.
M: Maybe wildlife that you might see.
R: If there's any foxes or deers or different type of animals.
M: If you saw a park ranger, Jessica, if you went to the public access spot where you always go, the one that's 15 minutes away, if there were a park ranger standing there, what would you ask that park ranger?
$\mathbf{R}$ : If the parking lot, is there available space.
M: Okay. And Rebecca, let's say... You remember we were talking about that spot that was further on down where people are fishing? If you saw a park ranger there, what would you ask that park ranger.
$\mathbf{R}$ : Is this a safe area to fish at?
M: Okay.
$\mathbf{R}: \quad$ Or would I have to go further down?

## Segment E: Rural 1, Low-income; July 12, 2022

M: Okay. Very good. Okay. And what safety items would you like at a public water access? So Rebecca, can you go first? Imagine that spot, benches. It's 30 minutes away from where you said, and there are benches. What else would you like there, just to make it more pleasant or more agreeable for you?
R: A caution sign so people wouldn't go in a certain area and they get stuck and they can't get out.
M: Yep. What else?
R: Maybe how to use the life jackets.
M: Okay.
R: And if somebody gets hurt, they can know how to use a first aid kit.
M: Do you want a first aid kit at the public water access?
R: Yes, just in case somebody get injured.
M: Okay. What about a form for a fishing license?
R: Yes.
M: What else should be part of the comfort and safety? We have benches, a picnic table, restrooms. Jessica, what else do you want for safety?
R: In closer to the bank, supposed to be have a railing that don't go closer over there. This may be getting off slide or you can go through the water, like some fences.
M: Okay.
R: $\quad$ So for safety for kids.
M: $\quad$ That makes sense that there'd be a fence and adults can move the fence, but the water not be accessible. Okay. Rebecca, yes or no? Would you like to be able to rent or borrow equipment like kayaks, canoes, fishing poles at the public water access spot?
R: Yes.
M: Which of those things do you want? Kayak? Canoe? Fishing pole?
R: Fishing pole.
M: Okay. And how much does it cost to rent a fishing pole for a half a day?
R: $\quad$ Maybe about $\$ 1.50$.
M: Okay. And if you wanted to try kayaking, how much does it cost to rent kayaks for half a day?
R: $\quad \$ 3$.
M: And if you wanted to try canoeing, how much does it cost to rent a canoe for a half day?
R: $\quad \$ 5$.
$\mathbf{M}$ : $\quad$ Okay. How much is it for a full day?
R: $\quad 15$.
M: Okay. Jessica, do you want any kayaks, canoes, or fishing poles at a public water access spot?
R: For me? Kayaks.
$\mathbf{M}$ : Okay. How much does it cost to rent a kayak for two hours? For half a day or for the whole day?
R: Two hours. \$2. One hour. \$1. If you want eight hours or whole day, so whole day, maybe eight hours, so \$8.
$\mathbf{M}$ : Okay. And how much does it cost to rent a fishing pole for a few hours or a half a day or a full day?
R: $\quad \$ 3$.
M: Okay. What about the other things that you mentioned, like the restroom? Do you bring your own paper if you're wise, or should there be paper there? Should there be hand sanitizer? What do you need there?
R: In our area, they already have paper towel in the restroom and they also have hand sanitizer, maybe 10 feet apart in the area since the coronavirus hit. So our public area, they put hand sanitizer, automatic or some are pump or some are in the bottle that you can punch or whatever.
M: Okay.
R: So in our area, we have toilet, and they have toilet paper you can use, and [inaudible 01:19:17]-
$\mathbf{M}$ : In the public access spot?
R: Yeah.
M: The public access? Okay.
R: Yeah.

## Segment E: Rural 1, Low-income; July 12, 2022

M: So Jessica, in order for you to go more often to the public access spot, for the public water access, what are the things that we talked about would help you do that? Which of the things that we talked about would make it more agreeable for you to go to the public water access spot more often?
R: Because of the pandemic supposed to be have hand sanitizer some 10 feet apart. And if you go to the restroom, they already provide your toilet paper in there, and if in the area it's safety to get any of the water or not safe to get any of the water at this [inaudible 01:20:06].
M: So what would make you go more often? What would have to change, if anything, about your public water access? But what would make you go more often?
R: I like to go more often like sightseeing only to clear my mind or in a busy day, I want to go in there to relax myself.
M: Okay. Rebecca, of the things that we talked about, what [inaudible 01:20:30] to the public access? What would encourage you? What would make you say ... what would change? If you say, "Well, I can't get there," or "I'm not going to go," what would make you say, "You know what, I'm going to go today?"
R: If I had friends to go with me, and we could all go together as a group and take other people with us, show them around the area.
$\mathbf{M}$ : How were you going to tell your friends what it's like?
R: $\quad$ Call them on the phone and tell them how the place was and show them pictures.
$\mathbf{M}$ : $\quad$ Where are you going to get-
$\mathbf{R}$ : $\quad$ By sending the pictures through the text.
M: Okay. So you would like something available on a website that you can share with friends?
R: Yes.
M: A picture ... public access spot?
R: Yes.
M: Okay. So now you have pictures of the public access, public [inaudible 01:21:39]. What do you think? Now, you have pictures of the public water access spot that you can share ... friends. What other two things do you need to go more often?
R: $\quad$ Transportation, like a bus. Somebody could drive a bus and everybody get on the bus together and maybe they could walk to the area if it's not too far.
M: Rebecca, you said you want to be by yourself. You were by yourself on that bench and seat. So what would make it easier for you to go by yourself?
$\mathbf{R}$ : I could ride a bike to the area.
M: Okay, so access through bike. Is there anything would make it more appealing for you?
R: Maybe less trees and different bench tables where people could sit at to enjoy the nice weather.
M: Okay. Tell me if you agree or disagree with this statement: I want to do more to help local creeks, rivers ... healthier, and pick your answer but don't share it. I want to do more help make local creeks, rivers, and lakes healthier. Strongly agree, somewhat agree, neutral, somewhat disagree, strongly disagree. Jessica, have you picked your answer?
R: Yes.
M: And Rebecca, have you picked your answer?
R: Yes.
M: $\quad$ So what answer did you give, Rebecca?
$\mathbf{R}$ : $\quad$ Strongly agree.
M: What makes you say that?
R: Maybe I could do more research on it, on the creeks and the rivers and the lakes to see what things that you could create in the area.
$\mathbf{M}$ : What things would you maybe create in the area?
R: $\quad$ More areas where you could sit down or put a boat in watering or go swimming.
M: Okay.
R: And with safety rules.
M: Jessica, what was your answer to this question?
R: $\quad$ Strongly agree.
M: Strongly agree. Tell me what makes you strongly agree with this statement.

## Segment E: Rural 1, Low-income; July 12, 2022

R: To help the local creek and rivers and lakes healthier, supposed to be that you are not bringing any dirt in it, like trash. If you are fishing on the creek, sometimes we bring some water bottles. Then, if it's empty, we just throw it in the side. Then sometimes if we have rain, so those bottles can go through in the water. So to make it healthier, it's better to keep our own trash to ourself, not throwing in the water or leaving in the area where you are that time that you are in the water. So for me, it's to do-
M: You know what, I'm just wondering why do you care?
R: Because you want your water healthy and clean. So you need to be ... because you don't want your water dirty because sometimes our water need to be clean so we can use to it. Or sometimes if we need water, we can use to drink, to filter it. I don't want the waters to be dirty and also to make our environment healthy also.
M: Well, those are fine things to say, but why specifically do you want the water to be healthier or cleaner and better? Mean, everybody wants everything cleaner and more wonderful. Why do you specifically want the water?
R: Because if the waters get chemical or whatever, then if we're fishing and we eat those fish, and those chemicals will going to go inside our body. So we better make our water cleaner and healthier so that the fish that we eat or whatever in the water that we eat, it's healthier for us, too.
M: Rebecca, can you tell me what made you strongly agree with that statement? Because it's perfect to want healthier creeks, rivers, and lakes. I mean, what are you, a Communist? You don't want that? I mean what's specific to you makes you want local creeks and rivers and lakes to be healthier?
R: $\quad$ So it wouldn't be polluted with different chemicals and we wouldn't get sick.
M: Yeah, but how does ... I mean that doesn't tell me anything about you, though. I mean, what makes you say that?
R: Because I wouldn't want my nieces or nephew to get in the water and then they get sick because the water, when they swimming, the water goes in they pores, they skin.
M: Yeah. Okay. Let's see. How much do you agree or disagree with this statement? My actions contribute to water pollution where I live. My actions contribute to water pollution where I live. And so pick an answer, and then tell me about your answer. So Rebecca, do you have an answer here?
R: Yes.
$\mathbf{M}: \quad$ And Jessica, do you have an answer here?
R: Yes.
$\mathbf{M}$ : Okay. So Jessica, what is your answer?
R: Strongly agree.
M: Strongly agree?
R: Yes.
M: And Rebecca, what is your answer?
R: $\quad$ Strongly disagree.
M: Okay. What makes you say strongly disagree, Rebecca?
R: Because I don't have no ... I don't contribute any action to what I want to want to say about the water over here where I live at because we have a water company that deals with the water area out here.
M: Okay. So tell me some of the things you do to make sure that you don't contribute to water pollution.
R: I don't throw any bottles in the water. I throw them in the trash can.
M: Okay. What else?
R: $\quad$ And if I see anybody throwing anything in the water, I'll call the people and tell them that somebody is polluting the water by throwing plastic bottles in there.
M: So Rebecca, at my age, I too am a member of the police. Yeah, man; I do that, too. I do.
R: I know.
M: Can you tell me what makes you strongly agree? What makes you believe that you do contribute to water pollution?
R: $\quad$ Sometimes people throwing garbage into water. That's why [inaudible 01:30:11].
M: But just you personally. Not everybody else; just you personally. What do you do to contribute to water pollution?
R: Sometimes I throw stuff that's the water pollutant, not a chemical; something like plastic.
M: Okay. What else you may have done by accident or without thinking that contributes to water pollution?
R: When I do fishing, sometimes I throw the ... What you call that one? The hook that I throw in the water.

## Segment E: Rural 1, Low-income; July 12, 2022

M: Okay. Well, I want to find out what are some of the things you can do in your personal life to help make the water and land clear and healthier. So what are some other things you can do besides making sure the trash doesn't get into the water? What are some other things you might be able to do?
R: Go talk to a person that's over the water company and give your ideas about what you could do to help them out, like pass out flyers and have them come to a meeting.
M: Okay. So be a volunteer for different water-related organizations, but what else [inaudible 01:31:42] you could do that would make the waters around you healthier?
R: If I seen people that throw in their cans, then I tell them don't throw that there. You are supposed to throw that in the garbage or someone or keep it on yourself and go on your house, throw that in the garbage, not in the water.
M: So you and Rebecca would be police. Okay. Does either of you have a dog?
R: No.
R: No.
$\mathbf{M}$ : $\quad$ Have you ... not pick up after their dogs?
R: No.
M: So every time you see the person with the dog, they always pick up after their dog?
R: Yes.
R: Yeah, over and over.
$\mathbf{M}$ : Does either of you have a lawn or a yard?
R: Yes.
M: How much fertilizer do you use or not on your lawn, Rebecca?
R: Well, the landlord take care of that.
$\mathbf{M}$ : And do you know if the landlord uses a fertilizer or not?
R: He don't. He don't.
M: Jessica, do you have lawn or a yard?
R: Yes, we have.
$\mathbf{M}$ : You use fertilizer?
$\mathbf{R}$ : For the weeds killer and fertilizer for the weeds only, but we don't have plants in our house in here, more on weeds or lawn grass.
M: Okay, and have you ever thought of alternatives to weed killers?
R: Yeah, we do weed killing, too. We have chemical to spray our weeds.
$\mathbf{M}: \quad$ And are there other options that don't involve chemicals?
R: No.
M: Okay. Some of these things that I'm going to now offer might seem inconvenient or require a change, and so tell me how motivated or not you would be to do these. The end goal is cleaner water, and I'm going to find out if you'd be willing to do some of these things. So can I see some of those things? Some of those things seem really inconvenient. What would it be like if you got a rain barrel? Rebecca, how convenient would that be to get a rain barrel?
$\mathbf{R}$ : It would be very convenient because that way you could put the water in there, and everybody could get as much as water they want to conserve it.
M: Do you have a rain barrel now?
R: No.
$\mathbf{M}$ : What is the reason that you don't have a rain barrel now?
$\mathbf{R}$ : $\quad$ The price.
$\mathbf{M}$ : What would make a rain barrel easier about the price?
R: If I could get it for cheap instead of paying a higher price for it.
$\mathbf{M}$ : How much does a grain barrel cost?
R: I don't even know.
$\mathbf{M}$ : What is your guess
R: About 200.
M: Okay. And Jessica, do you know about options that are without chemicals for fertilizer?

## Segment E: Rural 1, Low-income; July 12, 2022

R: No.
M: What makes you make that face? What was that face when I talk about non-chemicals when it comes to pesticides?
R: Mostly we use a chemical to kill.
$\mathbf{M}$ : Okay, and how motivated or not would you be to explore other options that don't include chemical?
R: I can say neutral.
M: It doesn't really sound like you're neutral. It sounds like you're not very motivated.
R: Yeah, because we get more on poison in here, so we need to use chemical to kill it.
$\mathbf{M}$ : How willing or not would you be to investigate other ways to be rid of insects without chemicals?
R: Willingly to do that, too.
M: Okay. What are some of the other things that you can do or that would be easier for you to help clean water with?
R: $\quad$ Not using chemical.
M: I don't know. What would it take to make the environment more important for you? What would it take to make ... Let's see. What would it take to making the water healthy a daily thought of yours? How could thinking about the water every now and then ... What would make you think about the water every day?
$\mathbf{R}$ : Don't use gasoline in boat. Use more on ... not using gasoline because sometimes [inaudible 01:37:46]-
M: Just for you, the question is, what would it take for you not to use chemicals? What do you have to understand about the water for you to no longer use chemical?
$\mathbf{R}$ : Chemical can cause the water dirty, too.
M: Yeah, chemicals can pollute, too. And Rebecca, what would it take for you to maybe ask your landlord for help with the rain barrel? You're thinking about clean water; I don't know how often. What would it take for you to think about what the water every day and ask your landlord ... barrel? What would it take to for you to do that?
R: $\quad$ Get more people on my side to go with me to talk to him and give him some ideas.
$\mathbf{M}$ : What do you mean by that?
R: Ideas mean tell him what places he could go to get it and how many he could bring.
$\mathbf{M}$ : Rebecca, what does a rain barrel do? How does a rain barrel help the water?
$\mathbf{R}$ : And let the water flows through it.
$\mathbf{M}$ : Some people think that bringing people in contact with nature, and especially the water, makes them think more about the natural environment. That's a hypotheses. So do you agree or disagree with that? The more you see the water, the more you care about the environment. Is that true or not?
R: $\quad$ No.
R: It's true.
$\mathbf{M}$ : $\quad$ That's not true?
R: No.
M: Jessica, what makes that not true?
R: For me, it's true.
M: Okay. What makes that true for you?
R: Because on yourself or myself, I know nature is more important for us because we need cleaner water to drink. We need air, fresh air to breathe. If we have those chemicals in our body, we going to get sick. If we drink those waters dirty, we get sick.
M: Yeah, like the chemicals you use for insecticide, birds eat those insects and then the birds ...
$\mathbf{R}$ : Yeah, that's true, but we're more on chemical to kill insects.
M: I'm sorry.
R: We're more on chemical ... easy way to kill insect if we use chemical. I admit that we, but use chemical to kill some insects for our house here, like mice.
$\mathbf{M}$ : Would you say that this statement is not true? Can hear the water the more you care about the environment?
R: We need fresh air to breathe.
M: Right.

## Segment E: Rural 1, Low-income; July 12, 2022

R: And we need fresh water to drink, and we want our ourself to be healthy instead of putting all that chemicals in our body.
M: I just want to find out if this is true or false: The more you're near the water, the more to care about the environment. Is that true or false?
R: True.
M: Well, you said it was false the first time I read it. Bringing people in contact with nature and especially the water makes them care more about the environment. [inaudible 01:41:50] thoughts before?
R: $\quad$ Not sure.
M: Okay. Can you think of three people [inaudible 01:42:01], if they were near the water more, would they care more about the environment?
R: Yes.
$\mathbf{M}$ : What makes you say that?
R: Because they would want to feel the water on their skin, and how-
$\mathbf{M}$ : How does that make them care more about the environment?
R: $\quad$ They could try to help out with different things with nature.
M: Okay. Ladies, I don't have any more questions for you. Do you have any questions for me?
R: No.
R: No.
M: Thank you so very much. You'll be getting a gift. You'll be getting an email gift card very soon. Thank you.
R: Okay. Okay.
R: Thank you.

## Segment F: Rural 2; July 11, 2022

Moderator: And that's our cue that we are recording. But like I said, this is anonymous, it's confidential. We will not release your identity affiliated to this report or what was said. And that's it. I want you to give me the good, the bad, the ugly, the everything.

## Respondent: Okay.

M: So do any of you have any questions for me before we begin? Dillon, do you have any questions?
$\mathbf{R}$ : Is it okay to drink during this?
$\mathbf{M}$ : It's cocktail time, it's happy hour, right?
R: I'm just asking because some groups, they complain if you'd drink, but-
M: Well.
R: I figure since it's two hours and it's hot, probably can drink. But I just wanted to ask the question.
M: Listen, as long as you're not being disruptive, as long as you're not being disruptive like [inaudible 00:00:58]. I don't know how that affects you but if it makes you feel-
R: Oh no. I mean just regular drink.
M: Oh I thought it was like cocktail or beer.
R: I'm just drinking Starbucks triple energy. So-
M: $\quad$ Well, that works for me.
R: $\quad$ [inaudible 00:01:14].
$\mathbf{M}$ : $\quad$ Of course it
R: It was just a question because some groups don't want you to drink too much during.
M: Listen, I would even encourage a little happy hour beverage time, but as long as it's not disruptive and you're not like...
R: Yeah.
M: It's 7:30, it's okay. And Candy, of course we can eat candy too, but not her. Regular candy. If you want to have a snack and a sandwich, but where it gets to chips and things where the rustling of the bag. You can mute yourselves. Have your bite to eat and then I'll wait until you're done.
R: All right. Thank you.
M: Finishing that bite, because of course I don't want you to choke or anything like that either. So we will take this, because of course, this is $7: 30$, this is family time or you or me time. So of course we'll make those exceptions. Absolutely.
R: All right. Thank you.
M: And I'm drinking my iced tea here in my little refillable bottle here, so... I need it because I'm going to be doing a lot of question asking. So yes.
$\mathbf{R}$ : Where are you from by the way?
M: Okay, so I am based in Tampa, Florida, so yes, it is hot here.
$\mathbf{R}$ : [inaudible 00:02:40]
M: It is so hot. But I'm in air conditioning, central heat and air, so it's fine.
R: Oh, that's good.
M: So no heat today. Just cool air to talk. So here we go. So let's start with our winner of the day, Miss. Candy. So here's some questions for our introduction. And I'll prompt you if you forget all of these, l'll just ask you, don't worry about remembering.
R: Okay.
M: $\quad$ So here are the questions. Where do you live? And what I'd like to know is your city, your state or area where you live, and then who do you live with? If you're by yourself, if you're with family, if you're with roommates, if you are with pet children, all are included. And then give me an idea of your typical day. What are you doing on a average day in your life? And then give me something that worries you and then something that gives you hope, joy, and satisfaction. Okay. Candy, where do you live?
R: Okay, I live in Lenox, Pennsylvania.
M: Okay. And who do you live with?
R: I live by myself.
$\mathbf{M}$ : Okay. Do you have any pets?
R: No.
M: Okay.

## Segment F: Rural 2; July 11, 2022

R: $\quad$ No pets.
M: No pets. I just had a previous group, by the way. All the people had cats and their cats were just climbing all over them. I always like to ask because pets are an important part of human life and that also determines part of the topic that we'll be talking about today.
R: Okay.
M: Because sometimes people like to do outdoor activities with their pets. So that's why I ask. Okay. So give me an idea of your typical day. Just a regular day in Candy's life.
R: I like to get up and do my housework early because it's cooler in the morning.
M: Yes.
R: And then I like to get on my computer, do a couple surveys or whatever else that I'm doing that day. I paint, I'm just getting into painting again after a long sabbatical, and I like to write music.
M: You do?
R: Yes.
M: Oh, nice. Fantastic.
R: I garden, I have about 15 cats outside that are my neighbors. I like to play with them.
$\mathbf{M}$ : Okay, so you do have some outdoor children that come around?
R: Yes.
M: Okay.
R: And they're so adorable.
M: Okay, so what's something that worries you? And then what's something that gives you satisfaction?
$\mathbf{R}$ : Politics worries me right now. What brings me a lot of joy is my twin grandsons.
M: Oh, how sweet. How old are they?
R: They're so funny. They're going to be 12 in a couple months actually.
M: Oh wow. So they're getting into that interesting teenage... Pre-teen phase. Right? Oh good.
R: I live up on top of a mountain. And-
M: You do?
R: Yes.
M: What mountain?
R: It's absolutely beautiful.
$\mathbf{M}$ : What's the name of the mountain?
R: It's almost by Elk Mountain. It's not too far from Elk Mountain, but it's overlooking Acre Lake. So we're up on top of the mountain and if you look down you can see Acre Lake.
$\mathbf{M}$ : Oh, that's sounds beautiful.
R: But my grandsons live in the city. I live in the country, so I bring them here a lot. That's why I bring them here.
M: Oh wow. That's wonderful. Okay, thank you Candy.
R: Thank you.
M: Let's go to Glenn and then Dillon to close that out. Okay. So Glenn, where do you live?
R: I live near Williamsport, Pennsylvania.
M: Okay.
R: I live in a smaller town outside of Williamsport called Cogan Station. It's a really small town. And-
$\mathbf{M}$ : Is that northern Pennsylvania or southern Pennsylvania?
R: It's northern. North central Pennsylvania.
$\mathbf{M}$ : You get a lot of the snow action going on.
R: We didn't last year. We did the prior year. Prior year we did, We got two feet.
M: $\quad$ That lake effect snow. Yes.
R: Yeah, we got two feet at one time and it was a mess. But we had snow on the ground most of that Winter, the year before last. Not this past Winter.
M: Yeah.
$\mathbf{R}$ : This past Winter we didn't have much.

## Segment F: Rural 2; July 11, 2022

M: Okay.
R: Comes and goes.
M: $\quad$ Comes and goes. Right?
R: Yeah.
M: I should have said that, I'm origin... To answer Dillon's questions, I was born and raised in Massachusetts.
R: Oh yeah.
M: So I know snow. North, close to New Hampshire, Massachusetts. So I know snow.
R: I lived in Springfield, Massachusetts.
M: Springfield. Yes. On the west side. I was born 20 miles north of Boston. So at Boston Suburb and that's why I live in Florida.
R: Yeah.
M: It's a joke. Get it? Snow. Yeah. I'm running away-
$\mathbf{R}$ : It gets cold up there. It gets cold and snowy up in that part. Yip.
M: It's that wet, humid, cold.
R: Yeah.
M: $\quad$ That just gets in your bones.
R: Oh yeah.
M: And the sky is always gray. They call it New England for a reason. It's just like England. But anyway. So Glenn, who do you live with again?
R: I live with my wife and I live with two dogs and seven cats. Yeah. We have a horse as well. So...
M: Oh lovely. Oh, a horsie.
R: He's a Belgian draft horse. We board him somewhere else. I've only got two acres here. So he'd eat the whole two acres in no time.
M: Okay. Oh, so you have him in like a horse hotel?
$\mathbf{R}$ : Yeah, he is board in another place. Yep.
M: Okay. So where he gets his exercise and all that and they take him out. Okay, wonderful. Okay, so tell me, walk me through your typical day.
R: I'm early riser, get up about five every morning. And of course my newest puppy, she likes to make sure I'm up at 5, 5:30 every morning. So she jumps up on the bed and says, "Come on, let's go, let's get up".
M: She doesn't know when you have a day off?
R: No. No such thing as a day off with her. So... She's a year old. She just turned a year old. So she lets me know when it's time to get up. And with two acres, I got a lot of yard work to take care of and a lot of gardening. I do a lot of gardening and I'm a painter as well. I paint.
M: Do you paint? So you paint Candy? Canvas, on whatever materials or...
R: I paint acrylics on canvas.
M: Oh, lovely.
$\mathbf{R}$ : And I paint a lot of dog portraits and-
M: Oh you do?
R: Yeah. Things like that. So...
M: Have you painted your latest of the bunch?
$\mathbf{R}$ : Pardon me?
M: Have you painted your latest of the bunch? The little one year old?
R: No, I haven't done her yet. I've got somebody else's border collie I'm working on right now. So...
M: Oh my God. Like Lassie. No, almost like Lassie.
R: Yeah. Little bit smaller.
M: Yeah, little smaller.
R: $\quad$ She's black and white.
M: When I was growing up, Lassie was the thing. Ooh, I just threw my necklace over me. I talk with my hands. Like I said, I don't take notes. But Lassie was the thing. I used to have a lassie dog. I was born and raised in the seventies. But Lassie was still on TV at the time, so... Oh, I just love collies of all shapes and sizes. Thank you. Oh, what worries you and what gives you satisfaction?

## Segment F: Rural 2; July 11, 2022

R: I'm kind of like Candy, the political atmosphere, just blowing my mind. And my satisfaction is my painting and my animals and my yard and everything. And this is where I get all my... I relieve my attention out in the yard and everything. So...
M: So exercise too.
R: Yeah. I get a lot of exercise.
M: You get a lot of exercise too.
R: Yeah.
M: Okay. That's wonderful. Thank you so much Glenn. And last but not least, Dillon. Hi Dillon. Where do you live?
R: Hello. I'm upstate New York in a small town called Deposit.
M: Okay. And where... Because New York is pretty kind of like this. So are you near Buffalo, Rochester, Syracuse, Utica?
R: You ever heard of Bennington?
M: Yes.
R: $\quad$ Yes. I'm about 25 minutes from Bennington.
M: Okay, so that's closer to the Pennsylvania, it's mid New York state going west sort of, right?
R: Yeah. Because the Pennsylvania border is... Well if we go to my town, the actual town Deposit, it's probably about seven minutes away. And then if you go another 20 minutes, it's like Pennsylvania border.
M: Right.
R: They're very close.
M: Okay.
R: $\quad$ Some people buy fireworks, but not me. Because they buy it in Pennsylvania and bring them across the border, which obviously, not a good idea.
M: No, I don't think so. Okay. And you could also get a ton of snow I'm sure.
R: Yeah.
M: With the lake effect. Okay. And so who do you live with?
R: I live with my grandma, my grandpa, my aunt, and my 18 year old cousin. And we have two dogs. Which one's a Chow Chow and one is, I don't know what it is, some kind of a mutt [inaudible 00:12:39].
M: So the chow is the... Who's older, the mutt or the Chow Chow?
R: $\quad$ The mutt's around 11 and the Chow Chow's around nine.
$\mathbf{M}$ : $\quad$ Okay. And give me an idea of your typical day?
R: I wake up and I usually do some surveys or talk to some friends online. I do a lot of Skype calls with my girlfriend from Malaysia.
M: Oh wow. She's so far away.
$\mathbf{R}$ : Yeah. So the timing is a big difference. So sometimes I don't [inaudible 00:13:14] until noon, one, two. Depends on the day. We watch a lot of movies and stuff and I play video games. I like to... Well not typical day, but I enjoy playing pool or going bowling. But with the Covid stuff it's kind of rough.
M: Yeah, it's a little hard sometimes. Yeah.
R: But yeah. I like to help my aunt plant flowers and do gardening and stuff sometimes too.
M: Oh, that's awesome. Okay. And then tell me a worry and then a hope and satisfaction.
$\mathbf{R}$ : I guess the worry, it's sort of like the politics, but the inflation and shortage of products.
M: Yes. The gas prices are not... Yeah. I think they're going a little bit more down in July, but not enough to feel back to where it was.
R: Yeah, that's true. And then shortage of products are bad too, obviously.
M: Yes. Yeah. Give me a hope and satisfaction or joy. Something in your life that gives you joy, a hobby, your family.
R: Video games, and talk to my girlfriend, friends and family. And my grandma, I'm really close to my grandma.
M: Oh that's wonderful.
R: I've lived with her since I was 10 years old.
M: Oh, beautiful. Aw, that's awesome. Okay, well thank you so very much for giving us those little snapshots of your life. And this is the introduction. So we are going to be talking about areas in the outdoors that you may

## Segment F: Rural 2; July 11, 2022

or may not have had access or visited, but you may have done or may not have done. And that's okay. So here is the first question to start the topic on the outdoors. How much time do you spend outdoors and what are the activities that you do? I know Glenn, I'm going to start with Glenn. Glenn is in his two acre land doing lots of stuff on that land. So give me some of the ideas that you're doing outdoors? And then outside from your home.
$\mathbf{R}: \quad$ Yeah. Oh, outside from my home.
$\mathbf{M}$ : $\quad$ That too. In and outside your land, and then outside.
R: Basically on the outside I actually bring my canvas, my easel out. I'm on the deck right now. I'm outside. So I actually bring the easel out here and paint outside.
M: Oh lovely.
R: $\quad$ And because my studio is right next to me on this big double door over here, but I bring it outside. I used to be a project manager in the energy industry. So l've worked and been through, and worked in every state in the United States.
R: Oh wow.
$\mathbf{R}$ : $\quad$ Yeah. One of my favorite places l've ever lived is Wyoming.
$\mathbf{M}$ : Oh right. Because landscapes must be amazing.
R: Yeah, I was just about an hour away from Yellowstone, so I went to Yellowstone all the time. Even in the Wintertime, l'd go up there and snow mobile. I love-
M: What about now? What are you doing for fun? Do you do anything for fun [inaudible 00:16:43] and the outdoors?
R: $\quad$ I ride my bike along the bike path down here.
$\mathbf{M}$ : Is that a motor bike, like a motorcycle or is that...
R: No, a-
M: Regular bike.
R: Regular bicycle. Yeah, I have a motorcycle but I'm about ready to sell it. I don't ride it that much anymore so I just haven't gotten into it in a long time. So l'll get rid of it eventually more than likely. It just sits around so there's no sense in keeping a motorcycle [inaudible 00:17:13].
M: $\quad$ The good thing is that though you're getting your exercise it with your biking.
R: Oh yeah. On my phone l've got a health thing that... And so far today l've walked four miles, so...
M: Congratulations.
R: And that's just walking around the yard and walking and down the road here a little ways and back up and walk taking the dogs down the bike path and walking them. So I get four or five miles in a day just walking, just basically, because I don't sit very often. If I'm painting, I'm standing because-
M: Oh good.
R: $\quad$ l've got a chair that I can sit in, but l'd rather stand and paint all the time. So my easels like that.
$\mathbf{M}$ : So you're getting your exercise, your outdoors.
R: Yeah.
M: Okay, awesome. Thank you. And Candy, what are you doing outdoors? You live next to an amazing, gorgeous lake on top of a mountain.
R: Yes. So I'm from Bennington, New York.
$\mathbf{M}$ : What are you doing out... Oh, you are from Bennington, New York?
R: I come from Bennington, New York.
$\mathbf{R}$ : Wow. It's a small world.
R: Half of my family is. I was so excited when you said that.
M: Oh how sweet. Oh great. So Candy, what are you doing? Are you getting any time outdoors or if so, what are you doing?
R: Actually, I moved here two years ago, and when I came here I was not doing very well physically, so I wasn't getting a lot of exercise or walking or anything like that. I was just doing the bare minimum. But-
M: You were healing. Your body was healing.
R: Yes.
M: That's what you were doing. Even though you don't think you were doing anything but your body was healing and that's important to recognize. So you were healing.

## Segment F: Rural 2; July 11, 2022

R: Yeah. Thank you for saying that, because I guess I didn't realize that that is exactly what's going on. Because I do, I feel so much better since I've been here in the fresh air. I can walk out through the... We have a walking path through the woods. I can walk all the way through there.
M: Like a trail.
R: Like a trail. And I have a garden out front, a flower garden. And I spend time out there pulling weeds mostly. But I do put something new in every once in a while. I don't have a green thumb, but I'm in the process. I just lost 40 pounds [inaudible 00:19:58].
M: Congratulations.
R: But I kept it off. And I was just discussing with my sister last night actually, that I want to get a bike, because I feel like I can maybe, if I'm very careful and don't drive over a lot of rocky land then I could probably add that to my regimen. Because I'm doing a couple of little exercises now and trying to get [inaudible 00:20:30].
M: $\quad$ Trying to get out of the house.
R: Yes.
M: Well I know that here I've seen the adult tricycles with the basket behind. Sometimes they use them for deliveries, but there's an adult size tricycle. And I love that. I'm like... I and do have a bike myself. But that seems like more fun. I don't know.
R: I love that idea.
R: Does sound fun.
M: Yeah, it does sound fun. And there's a basket in the back with a lid. And I've seen them... A couple of more in the senior age people have it and they look like they're having such a great time. So maybe a tricycle.
$\mathbf{R}$ : That's something I should consider.
M: And then that way if you have physical, if you still are dealing with balance issues, that you won't have a problem with that. Okay. So let's go to Dillon. Thank you so much Candy. Dillon, activities that you like to do outdoors. You said gardening with your grandma or in the front yard or something like that?
R: My aunt, Yeah. Play-
M: Oh, your aunt. Your aunt. Yes. So what else do you like to do outdoors?
R: Just walking around in general. And sometimes fishing.
$\mathbf{M}$ : Fishing. Where do you go fishing?
R: $\quad$ The Deposit reservoir.
M: $\quad$ Say that again?
R: Deposit reservoir.
M: Okay.
R: And then we have water, like a... What do you call it? [inaudible 00:22:04] call it creek.
M: A creek.
$\mathbf{R}$ : We have one right actually down by our garden, so...
M: So you have one in your actual... Where your house is in your yard. Is a creek passing through?
R: Yeah.
M: Oh, how sweet.
R: And it's nice to go outside also just to... We have ducks that come down, because the neighbors have ducks and they just swim back and forth all around. It's crazy how they come back though, because-
M: So the water's really clean, I'm assuming.
R: It's not the cleanest, but there's some fish there sometimes. But because New York puts the fish in the water each year. So sometimes there's fish, but it's not the cleanest.
M: Okay. All right. Okay. So l'm going to take you on a little ride, an emotional ride. So you can close your eyes for this one. I'll give you a few seconds to just ponder and think. Just open your mind to this question. And then I want to hear your thoughts and you can all talk freely. I'm not going to call on you. Whoever wants to talk, they can talk and then we can take turns. So here's the question. Now that your mind is clear, you're ready to hear this question. How does it feel to be near water? And I'm talking about natural water, not a pool. How does it feel to be near the water?
R: Relaxing.
M: Relaxing.
R: Yeah.

## Segment F: Rural 2; July 11, 2022

M: What else?
R: Peaceful.
M: Peaceful.
R: Yeah. Relaxing. Peaceful.
M: What else?
R: You feel like you're back to nature.
M: Back to nature.
R: Yeah.
$\mathbf{R}$ : $\quad$ Nice and calming and natural.
$\mathbf{R}$ : Calming, natural. What else?
$\mathbf{R}$ : You know the waves that come in and come out, come in and come out? It's kind of like your-
R: Hypnotic.
R: Problems and your different things that you're thinking of during the day, it just kind of goes out with the water.
M: So the water is washing away all the stress and all the worries.
R: Yeah.
$\mathbf{R}$ : Yeah, like a Zen. Like you're in another-
M: Zen, like a Zen thing.
R: Yeah. Sometimes if you're just relaxing and not thinking, it's like you're in another world, like it's just you and the water.
M: At one with nature. You're with nature right there, you're all feeling it. Anything else?
R: Well, if I could smell, I can't because I severed the nerves into my nose rock climbing in the Adirondacks years ago. I fell and hit the back of my head.
R: Oh no.
R: Oh.
$\mathbf{R}$ : But I can still remember the smell. It's the smell of the freshness of the water and things like that.
M: So the smell. And what does the smell make you feel when it's clean water, beautiful fresh water? What does that feel like, Glenn?
R: Again, it's relaxing and hypnotic in a sense, especially when you smell and hear the waves coming in, like Candy was talking about. It's almost like it's hypnotic to you.
$\mathbf{M}: \quad$ Like a meditative state?
R: Yeah.
M: Okay. Any other thoughts, anyone? Candy?
R: $\quad$ And that smell is kind of like after it rains and you walk outside and you go.
M: $\quad$ And the soil, that freshness in the air?
R: Yes.
M: Yeah.
R: Oh, it's nothing like it. You can't smell that in Binghamton, I mean not a lot anyway.
$\mathbf{M}$ : $\quad$ And you can't replace it either. I mean-
R: No.
M: How many people have tried to put that in a bottle and sell it?
R: Yeah.
$\mathbf{R}$ : I think it would sell if they could figure it out.
M: Yeah, but that you can't replace that. That's amazing.
R: No, you can't.
M: Anything else? What other feelings come from water, Dillon?
$\mathbf{R}$ : Well, it feels nice when the breeze comes by and you get that cold air feeling sometimes.
$\mathbf{M}$ : $\quad$ Like a brisk feeling?
$\mathbf{R}$ : Yeah, so it feels refreshing and comfortable.

## Segment F: Rural 2; July 11, 2022

M: Refreshing, comfortable. These are all fantastic adjectives. Okay, so now let's talk about accessing the public waterways where you live. So Candy, that lake, is it public access? Can anyone go down there if they want to?
R: $\quad$ No, but there are lakes around here. We have a couple that are public access. You can go in, but you take responsibility for your own life. But at the lake, they have a lifeguard, they have a sandy beach. I can remember going to Tingley Lake.
M: $\quad$ Tingley Lake?
R: $\quad$ Tingley Lake, and it was just my grandmother and my sisters and myself, and we would have the best time. It just was the best time.
M: $\quad$ So around where you live, was it Acer you said?
R: Acre Lake.
M: Acre, Acre, I'm sorry. So that lake is not available to anyone who wants to just visit?
R: No. No.
M: So the landowners just have it private for themselves?
R: $\quad \mathrm{Mm}-\mathrm{hm}$.
M: So let's say Candy, if you wanted to go to any body of water that's close by that's public access, what place would it be?
R: Probably Tingley Lake.
M: Okay. Okay. And then what's it like there? So you said it has a sandy beach area?
$\mathbf{R}$ : Tingley Lake is a little more wild, but you can walk into the water.
$\mathbf{M}$ : $\quad$ What do you mean by wild?
R: You know how the lake has access points and docks and that kind of thing, Tingley Lake. It's just kind of like a lake. And I'm sure people go canoeing there and swimming there, but you don't really see a lot of people at a time there.
$\mathbf{M}$ : Is that a good thing or a bad thing?
R: That's a good thing I think. Now Acre Lake-
$\mathbf{M}$ : $\quad$ To not have so many people? Okay, Acre Lake, yes?
$\mathbf{R}$ : It's something different.
M: And what makes-
R: $\quad$ The 4th of July.
$\mathbf{M}$ : What makes it different?
R: The 4th of July, they have their families in and their friends in and they're shooting fireworks, which is kind of nice. I can see them from my window and that's kind of cool.
M: Do you have access to that lake?
R: $\quad$ No. My grandmother did, but she's passed now so they sold her little cabin.
M: Okay. Anyone else? Dillon, public waterways? You said that little creek that passes through your garden, your yard area. Are there any areas where people go like a park or something that's public access? A lake, a river? What's near you?
R: Oquaga [phonetic] Creek State Park, it's about 15-
M: Say that again.
R: Oquaga Creek State Park.
M: Okay.
R: It's like 15 minutes away. But you can go swimming there, they have where you can go camping and stuff. And then-
M: And do you go there often or have you gone there at all?
R: I've gone there, but has been many years, at least five years or so.
M: Okay. And what do you think of it? Is the water clean? Is it safe to go in or what?
R: Yeah, it's safe and clean. They allow people to go there. I'm not sure what the waterways are, but there's places to go fishing in our town and stuff, like under the bridge. People go fishing under the bridge.
M: Okay, and how easy and accessible is that?
R: I'm not actually sure about that. I've never gone there but I see people down there quite often.

## Segment F: Rural 2; July 11, 2022

M: Okay, okay. So it sounds like it's fairly accessible then.
R: Yeah.
M: $\quad$ And Glenn, how about you?
R: We have a couple places here. We got the Susquehanna River that runs through Williamsport area. And it separates South Williamsport from way regular Williamsport.
M: $\quad$ The Susquehanna is like long. It's huge.
R: Yeah.
R: Yeah.
R: Yeah.
$\mathbf{R}$ : $\quad$ Yeah, it is very long. And this is actually the west branch of the Susquehanna where I live. So it's got two branches and this is the west branch. People, they go down there and they boat more than anything and fish off the Susquehanna. They don't have a place around here that have beaches or anything along the riverside-
$\mathbf{M}$ : $\quad$ Or a park where people can picnic or barbecue?
R: $\quad$ They do have that, but there's not really a beach area per se. You can picnic down there by it and things of that nature, but I like this place called Pine Creek, which is nearby here. Which Pine Creek flows into the Susquehanna, and it has campgrounds and things of that nature, and it's really pretty up in there because it's more of a mountainous-
M: Can you swim in Pine Creek?
R: $\quad$ No. You can further down south. In the campground areas that I go to, you can't. I mean, it's too small then, it's not really a swimming area. You can wade in it, but that's-
M: Yeah, you could get your feet wet.
R: Yeah, that's about it. But it's pretty and it's in the mountains and everything. So it's a really pretty area.
M: Is it free or do you have to pay to go in?
R: You can go in. No, it's free to go in. You have to pay to camp of course, but other than that it's free to go in. They have bike trails going up and down Pine Creek and everything, so it's really well maintained and things of that nature. So it's really pretty.
M: Okay. And let's talk about if we are... Well, Steve, I think we're ready for the screen slides. Let's see. Steve? There he is. Okay. So this is a question that we asked in a survey regarding the bodies of water that are natural, not a pool. Not a pool, like a public pool or one in your friend's yard or in your own backyard. We're talking about when we refer to water, it's natural bodies of water. So here's a statement. Being near or on the water makes me feel happier: strongly agree, somewhat agree, neutral, somewhat disagree, or strongly disagree? If you strongly agree, raise your hand. Okay. Somewhat disagree, I mean, somewhat agree. Somewhat agree, raise your hand. Okay, we can stop there because it's just three of you. Okay, so we have two strongly agrees and one somewhat agree. I want to know, Dillon, why you somewhat agree?
$\mathbf{R}$ : Well, it feels relaxing sometimes to just think out in nature, but sometimes it just doesn't affect me. Depends on the water I guess.
$\mathbf{M}$ : Okay, so what is the kind of water that would make you feel really happy?
R: $\quad$ Going to the beach with friends and being near the water.
$\mathbf{M}$ : $\quad$ Are you talking about the ocean or a lake?
R: A beach, like the ocean.
$\mathbf{M}$ : Okay, so you would prefer to go to ocean water?
R: Yeah.
M: That would make you really, really happy. Okay. Candy, what made you say strongly agree with this statement? Oh, you're on mute, Candy. Could you unmute yourself please?
R: Oh, I coughed earlier.
M: It's okay.
R: Ever since I was very, very young, my dad has always taken us camping, and he's always been somewhere water and it just evokes a really strong emotion for me of just happiness and contentment.
M: $\quad$ So in a way the water brings you back to your childhood?
R: I think so.
M: Of happy times in your childhood?
R: Yes.

## Segment F: Rural 2; July 11, 2022

$\mathbf{M}: \quad$ Oh, that's wonderful. And Glenn, what made you strongly agree?
R: I think it's just the natural environment that's there with water. It really hasn't-
M: $\quad$ Describe it for me.
R: It hasn't been messed up by man. I mean-
M: So pristine?
R: Yeah. They haven't piled concrete on it and built a bunch of skyscrapers, unless you're in New York City of course. But like Yellowstone, when I was out there I used to love to go to this falls and everything and then the geysers and all that. And just the water, even the geysers, even though they're throwing water out of the ground-
M: I mean, that's fascinating to see, right? But what about around where you live? Around where you live, let me bring you back to your city.
R: Yeah, I like to go up to Pine Creek. You're out there and you just hear the gurgling of the creek running over rocks and everything, it's peaceful and it just takes you back. Then again, you look around, you'd say, "Wow, man's not out here. He ain't built anything." So that's what I like about it, it's just we haven't messed it up in other words, somehow, like a lot of places. And they're making sure that we're not going to. Hopefully they're going to keep that up.
M: Right. To conserve that nature, those nature spots that bring this joy and happiness. Okay. Let's go to the next statement. Okay. When I am in the parks or on trails near the water, I see other people like me. What I mean is if you look at yourself in the mirror, you're going to see another Candy, another Dillon, or another Glenn, or similar to you. Do you see people like yourselves in these places or do you see different kinds of people? And what we mean by this is do you feel welcome, identified, like, "Oh, l'm not alone, here's other people that are like me here that share this passion or this joy for being in the outdoors," or "Oh, thank God I'm not the only woman here or the only guy here." This is what we're saying. So Candy, how do you answer this one? Strongly agree, somewhat neutral, somewhat disagree, strongly disagree.
$\mathbf{R}$ : Well, when I'm out taking walks and I run into someone that actually looks like me is overweight, somewhat older, maybe using their walker or their cane, and I feel like I can identify because we'll make conversation like, "Oh, it's hot today" or "Woo, that's wow," and we'll just continue on our way, make a little bit of conversation.

M: $\quad$ How does that make you feel when you find someone that you can relate to?
R: It makes me feel good because you would think that I would be the odd man out at the place that I'm at right now. I'm usually very gregarious and very talkative and outgoing, but there are times when I'm not. And I hate to say it, but I'm a little embarrassed by where I am right now. But I'm kind of proud of myself too, don't get me wrong.
M: You have to be proud of yourself, Candy. You've accomplished a lot. And you're healing. You're healing.
$\mathbf{R}$ : Yes, I'm healing.
$\mathbf{R}$ : Don't need to be embarrassed, just get better.
M: Yeah, you're healing. It's a process. But so you feel good that someone else, maybe with those mobility issues or of your age group are also doing those things? So you feel identified is what I mean?
$\mathbf{R}$ : And it makes me feel good because we're on the same mission, we're trying to get in shape.
M: You're not alone. You're not alone. Right.
R: Yes.
M: Okay. All right, Glenn, and then Dillon. Glenn, when you're in the parks or on trails near the water, you see other people like yourself. How much do you agree?
R: Somewhat, because sometimes you run into people who are, for lack of better terms, trashing the place, dropping [inaudible $00: 41: 18$ ] cups, and throwing stuff on the ground. They can't carry it out or get it to a receptacle. But that's very, very minute percentage. It just bothers me when I see that happening. But other than that, most everybody out there wants to be there. They want to be, they're there to enjoy it. There's that very minute percent, that's why I say somewhat agree, that have a tendency to trash the place or do something silly and stupid in other words. But most of the time it-
$\mathbf{R}$ : $\quad$ That makes me so mad when they do that.
R: Yeah.
R: Yeah.
M: And thank you so much, Glenn. And Dillon?
R: I'd say somewhat agree, because I see some people that are around my age and then I also see sometimes younger or older people in the park. Or not the park, I mean... Well, yeah, the park downtown, I can't think of

Segment F: Rural 2; July 11, 2022
the name, but just our local park. We have water that runs through there too that I go by sometimes, sit. I don't swim there though because it's filthy. But when we were kids, a lot of people used to go down there and swimming and stuff, but not me.
M: $\quad$ Not anymore. But they go picnic or just could take walks or ride their bikes?
R: Yeah. And we have a basketball court and we have a, what is it called, a diamond, like the baseball diamond. And then on the other side of the park, there's actually another baseball field. So sometimes it's fun to watch the younger kids play their softball and baseball.
M: So you see people like yourself doing that, being-
R: Relaxing.
M: Walking around or playing sports or just sitting and enjoying nature?
R: Yeah.
M: Okay. Okay. All right, wonderful. Let's go to the next statement. Okay. This is the last one of this section. There is convenient access to the water for boating, fishing, or swimming near where I live. Strongly agree, somewhat agree, neutral, somewhat disagree, or strongly disagree? Let's start with Glenn.
R: I strongly agree. It's not very far from where I live to go to Pine Creek or go to any of the various parks that are around here that have water features. There's a little creek runs right down through here, so we find that out all the time too. And the Susquehanna River has boating ramps and things of that nature for people to launch their boats to go fishing on. My wife and I can be driving down in the highway, and there's this one area when as we make a curve that we oftentimes see a bald eagle sitting in the tree. So we see the bald eagle sitting in the tree and we know they're nesting around there somewhere because that's where he's always there and just sitting there.
M: Yeah. And I know that once they pick a spot, they like to stay around that area.
R: Forever. They'd always used that same nesting. I've seen a bald eagle's nest and they're... I tell my wife-
M: They're pretty big, aren't they?
R: $\quad$ Yeah, I say they got a condominium up there with multiple rooms.
M: A penthouse, a penthouse.
R: Yeah, because they're big. They're huge and they keep building onto them because they mate for life. Bald eagles mate for life, so they keep building onto them.
M: I should have gotten myself a bald eagle. I'm joking. No, I do see them in Tampa during the winter. I mean, every single bird you can think of. And I remember I was driving, and I live in the middle of the city, but it's a mix of suburban urban in Tampa. You're in the middle of the city, but it's not a lot of single family homes. And I'm by the river, and so I'm driving into my driveway, and all of a sudden I see this giant, I mean, I'm talking about this giant bald eagle swoop in front of me. And it was chasing, I don't know, a bird or whatever, and it just snatched it from the... Oh my god, I was dying. I just saw National Geographic right there. I wish I had a dash cam or something, but it was like the size of my car. It was-
R: They're big.
M: But anyways, I'm digressing. In the middle of the city-
R: You're fine.
M: Okay. It just reminded me of what you said of that. So, yeah. So Dillon, so that park where you were talking about, that's I guess in the downtown area of where you live, do you strongly agree with this?
R: I'd say somewhat agree because-
$\mathbf{M}$ : You can't swim in it you said.
R: You can't swim in that. Like I said, the one I told you earlier, Oquaga Creek, that's like 15 minutes away so I wouldn't say that's necessarily... Well, it's still kind of close I guess. Because-
M: Can you swim in that? Can you swim in that?
R: Yeah, you can swim in that. It's open to the public. Last time I was there they offered... I mean, they gave a fee to go there. I think it's only a few dollars though. But you can also go camping-
M: Is it affordable?
R: Yeah. It's only a few dollars before, but I haven't been there like five years or so. But there's where you can go fishing, like I said, downtown under the bridge, and there's other areas to fish throughout the area. You can go boating on some of the water, but some of the water's not... It's not big enough to need a boat.
M: $\quad$ Right. How about kayaking? How about a small kayak?
$\mathbf{R}$ : Yeah, some of the water out in the country.
M: Some of the water? Okay.

## Segment F: Rural 2; July 11, 2022

R: But not in the actual park I was telling you about downtown, because that's more like a small creek. And then the one area has, like I said, a few feet of water you could swim in, but not like a... You know what I'm saying? But it's dirty.
M: Yeah. Yeah. Okay. Thank you, Dillon. Candy-
R: You're welcome.
M: How convenient is the access to the water for boating, fishing, or even swimming or even just getting your feet wet near where you live? We're not going to include the lake that's by your house, because we know that's private.
R: Right. There's a couple other lakes around here that you can have access to. Also, I'm not sure what the river is. Is it the Susquehanna that runs through Binghamton?
M: I believe so.
R: I think so.
$\mathbf{M}$ : $\quad$ The large one? The large river?
R: Yeah.
M: I believe it is.
R: I think yeah.
R: $\quad$ So if you follow from Pennsylvania to New York down Route 11, there's all kinds of areas where you can camp and fish right on the river itself, which is kind of nice, actually. I like to take my time going through that area.
M: Okay. Okay. Awesome. So it's nearby. And let's say you decide tomorrow and everything, you're feeling great and you're like, "You know what? I think I'm going to go by the water in a public access site," you can easily get there? Not too, not too far, not too crowded? It'll be just fine.
R: Right.
M: Okay. Good. Good. All right, let's go to the next section. So now we're going to talk about features of a public water access site. So you guys mentioned a lot of things that some of the areas where you visit or have visited in the past. Some of the features, like you said, "Oh, there's a little area for boating. There's a little area where you could swim." So what would make you most want to visit a public water access site? Give me your wish list.
R: Clean water.
M: All right. Yeah. Pristine water.
R: Yes.
M: Unpolluted water.
R: And at least a few feet deep so you can just soak in the water.
M: Okay, so a shallow area for wading or swimming or just sitting in the water?
R: Yeah. I don't swim. I just like to get in the water.
M: Yeah, you just like to get in the water, not too deep. Perfect. Okay. What else? Anyone else?
R: $\quad$ Not crowded.
M: $\quad$ Not too crowded?
R: Yeah.
R: That's important.
$\mathbf{R}$ : $\quad$ That's true.
R: You don't mind a few people, but if you're shoulder to shoulder, it's a little...
M: It's uncomfortable.
R: You might as well go to a football game then.
R: That's true.
R: Very true. Very true. Okay. Anything else? So not too crowded, a little area for wading, shallow area. Candy, can you of anything?
R: $\quad$ Yeah, if they had an area where you could picnic, that would be kind of nice.
M: So picnic areas. A previous group told me about restrooms.
R: Oh yeah.
$\mathbf{M}$ : How important is that?

## Segment F: Rural 2; July 11, 2022

R: That's important.
R: Very. Yeah. You don't want to see people going in the streams.
M: $\quad$ Right. That would make you not want to go in the water.
R: Yeah.
M: Yeah. So public, clean restrooms.
R: Yeah.
R: Yes.
M: Okay. Anything else?
R: Maybe an area for the kids nearby.
$\mathbf{M}: \quad$ Like a playground?
R: Yeah, like a playground. Just like a smaller playground, somewhere-
M: $\quad$ Somewhere where they can blow steam.
R: That's a good idea.
$\mathbf{R}$ : If you have family members that have kids, they can go there while you relax by the water. Well, as long as someone watches them, of course.
M: $\quad$ Right. Of course. Of course. Their parents or their guardians are responsible. Okay. So we're going to explore some images, and I want you to tell me where do you see yourself visiting? Okay? So Steve, take it away. Okay, here we go. So this is set one, which each have a letter, A, B, C, and D. Now Candy, I want you to look at these pictures and tell me which of these do you see yourself visiting?
R: $\quad$ A and C.
M: Why? Tell me why. What about A and C compels you to say, "That's where I belong. That's where I want to go"?
R: Either one you could sit and watch the water. If you choose to just watch, you can do that and just kind of... The bench on the bottom on number C, in Binghamton, where I worked, I worked in downtown Binghamton, and behind the building was a bunch of these benches that overlooked the river. And I'd go out on my break and would just kind of de stress. I had a crappy job.
M: Oh, I'm sorry.
R: And I would just sit there for my whole break, my whole lunch and just-
M: To just disconnect from your job and just let the water take all those problems away.
R: $\quad$ Now my grandsons would like the other two.
M: B and D. Okay.
R: Yes.
M: Okay, because of the activity that's there? It looks like the pier in $B$, and $D$ looks like a kayaking group. Okay. What about you, Dillon? Where do you see yourself?
R: A.
M: Okay, tell me why.
R: It's not crowded, so it's more peaceful. It's got the picnic table ready so you can just pack up a nice lunch and bring some family or friends and just relax by the water. It looks like you could probably go fishing in that water possibly.
M: Looks like you could go fishing. Okay. Okay.
R: Yeah, just it looks relaxing, peaceful and natural.
M: Okay. Glenn?
R: I'm the same way. A and C. You'd be out there by yourself or with a few friends and that's it. The other two seemed like they'd have a lot more people involved in it and a little bit more crowded and things of that, especially D. If I kayaked, I've always kayak by myself and I didn't really want to be involved with a bunch of people kayaking and things of that nature. So I like $A$ and $C$ because, again, it's the peacefulness. You can hear the water. Well, $D$, I don't know if $D$, you probably couldn't even hear the water where they're at there, but you could hear the water-
M: $\quad$ Yeah, it looks like they're planning to go out into the water.
R: Yeah. Yeah. And I just prefer it because you could hear the water on both A and C. You could hear it lapping up against the shore and things of that nature. It seems like it'd be, like I said earlier, hypnotic and peaceful. So it's kind of relaxing.

## Segment F: Rural 2; July 11, 2022

M: Okay. Awesome. All right. Let's go to the next group of images.
R: Nice.
M: Okay, so we have E, F, and it goes across, E, F, G and H. E, F, G, H. So l'll go with Glenn. Now we're going to go in reverse. So Glenn, Dillon, and then Candy. Glenn, where do you see yourself visiting or doing?
R: I can't make out the letter on the top right. That looks like the fisherman up there. That looks like what I'd be doing.
M: Like fly fishing? It's like fly fishing? Okay, that's F.
R: Yeah, that's F. The other one, I don't mind motorboats, E. I don't, but I'm not into that kind of thing as much as I am-
M: You would be an F? You would be one of those fly fishermen?
R: Yeah. Yeah.
M: Okay.
R: The other ones look too crowded again.
M: So it's just you and your couple of friends fly fishing on the river?
R: Yeah.
M: Okay. Okay. Dillon?
R: I'd say G. Just could walk around and then maybe there's a camping area nearby?
M: Okay.
R: $\quad$ And the water looks peaceful.
M: So you could have your alone nature time, but also be within the camping area.
R: Yeah. And go fishing by the... Well, I don't know if you'd call it a shore, but beside-
$\mathbf{M}$ : $\quad$ That little rocky area?
R: Yeah.
$\mathbf{M}$ : You could see yourself sitting there fishing?
R: Yeah, just relaxing.
M: Okay. Okay. And what about you, Candy?
R: I would say G if I could figure out how I was going to get up from the ground, from sitting on the ground there.
M: So how about this? Here's my magic wand. It's a pen of course, but here's my magic wand. Ding. In G, we'd put a nice park bench.
$\mathbf{R}$ : Yes, that would be it then.
M: Okay. Okay. So G, if it had a park bench.
R: Yes.
M: Okay, great. All right. So now we're going to do some image magic. So we're going to go to the first screen that you saw, and then we're going to look at the second screen that you saw. I want you to choose which one do you overall see yourself in. The first screen, put up your finger number one, or the second screen? This is the first one. This is the second one. Which one do you see yourself? This is two. This is one. Okay, Candy is one. Dillon is one and Glenn is one. Okay, so let's go to one. Let's go to the first screen. There we are. So this is the one that you really want, that you could see yourself in either of these scenarios. Obviously, D, you're not going to be around all those people. Okay. So we're going to now go look at, and we're going to explore some of these features that could be in a public access water site or near. Okay, so here we are. There are seven features. Well, seven if you count other issues, but there's six plus other issues. So what would encourage or discourage you? So I want to know would this encourage or discourage? So a site being totally free of people, maybe some people. What is too crowded? So a site being totally free or with some people, does that encourage you or discourage you?
R: Encourage.
M: Encourage?
R: Encourage.
M: It feels like this group does not want to be around crowds.
R: No.
M: Okay.
R: $\quad$ Not too big.

## Segment F: Rural 2; July 11, 2022

R: Small crowds.
R: Maybe like 10 to 15 at most.
R: Small crowds. 10.
M: $\quad 10$ is fine. Okay.
R: Yeah.
M: So another group that I had were all women and they said that they did want some people around because they would feel safer that way.
$\mathbf{R}$ : That's actually a good point.
R: Yes. Important. Yes.
M: Because if they were the only person that was there, they would feel like it would be the beginning of a horror movie.
R: Like all the true crime shows, there's like a million of them nowadays.
M: Yes, exactly. Exactly. They would feel very unsafe if they didn't see at least someone else.
R: [inaudible 01:00:53] That's a good point. Yeah.
M: Okay. All right. Let's go-
R: [inaudible 01:00:59].
M: A few people. Not too many. So Goldilocks. Not too little, not too much, but just right.
R: Yeah.
M: Okay. Okay. Presence of parking, access to transit lines or bike paths. So in another group we had, they were like, "If I see too many cars, I'll just turn around and go home."
R: That's me.
M: $\quad$ That would be you, Glenn?
R: Yeah.
M: That would discourage you? Okay.
R: Yeah. Especially if you got a bike path and there's a lot of cars there and every one of them's got a bike rack on them, I'd be like, "I'm just going to run into people when I'm biking because they're all biking at the same time." So I would be discouraged because then you can't just enjoy it and just pedal and go. You got to watch out for people and watch out for people walking.
$\mathbf{M}$ : You're not free in that zone of biking, that biking zone that your mind goes to, right?
R: Yeah. Or trails. That means if you're near a trail or something like that, you're just, "Well, how many people am I going to run into while I'm walking up and down this trail?"
R: Right.
M: Or maybe you have a big glob of people that are just kind of taking their time and you just want to power walk. Yeah.
R: Yeah.
M: I understand. Okay. How about access to transit lines, especially people who don't drive? Is that important to have maybe a bus or a shuttle that goes... I don't know if there's train systems or high speed rail lines around where you live, but let's say, for example, a shuttle bus that takes you from that location, especially during the warmer months of the year, to a popular stop, like from downtown to $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ water area? How does that sound to you?
R: $\quad$ Sounds like it would be too crowded.
M: Okay.
R: [inaudible 01:03:12] I feel the same way. You get a bus of people and all of a sudden you've got a lot of people on the trails again. Or if it's just [inaudible 01:03:28]. I'd rather not have-
M: What if there was a reservation system? Let's say, for example, you have to reserve. You can't just show up. You have to reserve and then the park will allow X amount of people inside that area so it doesn't feel too crowded. How does that sound to you?
R: That sounds good.
M: Candy, how does that sound to you? You're nodding your head. I'm assuming that's a good?
R: Yeah, that's good. I wasn't too far from the Binghamton walking paths, and it used to really bother me when I saw a woman walking by themselves there because I'm almost positive there weren't cameras or anybody there to watch over what was going on.

## Segment F: Rural 2; July 11, 2022

M: So maybe some security presence there, like park rangers? We have that in number four. Someone being there to give you help, like a park ranger, maybe a security officer of some type.
R: Right.
M: Someone mentioned in the women's group, they mentioned it would be nice while on those bike trails or walking trails that every $X$ amount of meters or yards, that there's an alert system where you can go to a box or something. You push that button and a park ranger will come.
R: I like that idea.
M: Or maybe there's an app where once you get to the park, you sign into that app and then you'll be followed, and if trouble hits... Of course, you would opt in for these things. It's not like you're being tracked everywhere you go if you don't want to be. It's by choice if you feel that. How do you feel about that, Candy?
R: Well, I take my grandsons by myself a lot, and we'll just get in the car and stop wherever it looks interesting. And I don't really think about that-
M: But let's say if you go alone. But let's say if you go alone.
R: Yeah, I would want to know that we were safe, that I would be safe. But I like that idea of the buzzer.
$\mathbf{M}$ : Of the buzzer? Okay. Okay.
$\mathbf{R}$ : Alert system or something.
M: Right. They have them in college campuses where... I know where my daughter went to school here in Tampa, USF, every 50 meters or yards, there's a blue light that anyone can... As you're walking to the dorms or something, you'll always have something there. So that was kind of the similar idea.
$\mathbf{R}$ : Well, the other thing is if you get hurt, if you turn your ankle or [inaudible 01:06:31] your leg-
$\mathbf{M}$ : Good point. What if you're dehydrated?
R: Or a wild animal comes out of the woods.
$\mathbf{M}$ : Or you're dehydrated or maybe your blood pressure goes up or an animal?
R: Yes.
M: $\quad$ I'd pushing every box on the trail.
R: Yeah, I would.
M: I would... Yeah. Okay, let's go to the third point. The presence of trash cans and or recycling bins. What do we think of this?
R: That's a really good idea. I actually was going to say that earlier when we were talking about public water, but I forgot to, that it'd be nice to have a trash can or recycling bin nearby so people don't have an excuse to just throw trash [inaudible 01:07:14].
M: In the water or around.
R: Yeah. So I think that's a necessary item to have near public water.
M: Okay. And for the gentleman on point number four, someone being there to give you help, like a park ranger. I know the women took over on this one. So I want to hear from the guys. What do you guys think?
$\mathbf{R}$ : I think it's not necessary, but it's helpful because as long as they're checking around the area so that people feel safer, it's safer in general because you never know who's going to be there.
M: Yeah. And Glenn?
R: Excuse me. I've been in so many different... I mean, like Yellowstone, where the park rangers were few and far between because Yellowstone is so huge and a lot of parks out west are huge. So I'm kind of like [inaudible 01:08:20]-
M: $\quad$ They not only have to give you safety but advice, directions.
R: Yeah.
M: Maybe they could tell you the best way to go up this trail and, "Hey, when you get up to that point, make sure to look behind you so you can look at the view," or general information as well.
R: Yeah. Yeah. As long as they're there to do that and it's not overwhelming with a bunch of park rangers and things of that nature. Again, out West you don't very rarely... I mean, you had to go hunt one down, which I didn't mind. If I had to find something or needed one, then I wouldn't mind. You could find their vehicles and things of that nature, so they would park and you could go see them and things like that.
M: $\quad$ So just as long as they're not intrusive?
R: Yeah. Yeah.
R: Yes.

## Segment F: Rural 2; July 11, 2022

M: Okay. You knew they were there, but they're not intruding on your space, that joy, that relaxation that you're getting out of that beautiful location that you don't have... Oh, what was that name of... I was thinking of Yogi The Bear and that Ranger Smith I think was his name. We're not going to have those problems.
R: No.
M: Okay. Okay. Point number five, water safety and comfort. Things like availability of life jackets, how to boating or safety tips.
R: That would encourage me because it would feel safer and people that don't know certain things, they could maybe learn to be more safe.
M: Okay. What do we think of this, Candy?
R: I think it's necessary for some people.
M: Okay. Yeah, it is necessary. Especially the life jackets. Right?
R: $\quad$ Right. Right. [inaudible 01:10:18]
M: And Glenn? Oh, I'm sorry, Candy. Candy and then Glenn. Sorry.
$\mathbf{R}$ : That's not something that you really think about when you're out for a drive is life jackets and that kind of thing. If you see an interesting spot, you want to stop, that would be nice, actually.
M: Okay. Glenn?
R: I think it's important for you to know safety on the water and things like that, but I also think it's a personal preference. If you're forced to wear a life jacket, then I have a problem with that. If you want to wear a life jacket, it's your personal preference. I mean, to me. If they're there and people can't swim, definitely put them on. [inaudible 01:11:10]
M: Exactly. That's what we mean. People that aren't as confident swimmers or people who haven't swam in a very long time. Even though if you know how to swim, maybe that area where they are has a tendency to have some undercurrents that you may need some extra buoyancy. So this is the kind of feature we're talking about. Okay. Last point is availability of rental or borrowed equipment. Things like kayaks or canoes, fishing poles. What do we think of that in some areas? Some areas of course don't require that, but maybe there's a spot where you can fish or canoe or kayak.
R: That's a good idea in a bigger area in case you're just driving by and you want to go somewhere. Maybe you don't have your fishing pole with you. And of course not everybody's going to have a kayak or canoe with them all the time.
R: Yeah.
M: Yeah, those are pretty hard to pack and drive with. Yeah.
R: But it should be the low cost. Cause I think they deserve to have. Plus, it's wear and tear in their equipment. So it should definitely have a rental fee. It shouldn't be free.
R: Oh, sure.
M: It shouldn't be free, but affordable.
R: Yeah. Although free is nice but these cost something.
M: I mean, you don't want to pay 50, 60 dollars for 20 minutes on a kayak, do you?
R: $\quad$ No. Just as long as it's.
$\mathbf{M}$ : Well, what's affordable for you?
R: $\quad \$ 20$ maybe.
$\mathbf{M}$ : $\quad$ For how much time?
R: For an hour.
M: Okay. So \$20 an hour.
R: Mm-hmm.
M: Okay. How does that sound? Candy?
R: That sounds affordable.
M: Okay. What about you, Glenn?
R: Yeah, I don't think it should be free. Cause if it's free, they're going to lose it. People are going to walk away.
M: Right, people are going to walk away with it. Right. Right.
R: Even if they signed for it, then they're going to say, Oh, I lost it. Something like that. What are you going to do?
$\mathbf{R}$ : It would going to be crowded too if it's free.

## Segment F: Rural 2; July 11, 2022

R: Yes.
$\mathbf{M}$ : Cause I mean, imagine stealing a kayak. Where are you going to put it?
R: Yeah.
R: That's true.
M: Okay. All right.
R: Yeah, you could.
M: Go ahead.
R: You could float it away. Someone would pick it up. But yeah, I get what he's saying though, because if it's free, people are going to be like, Oh, I don't have sign for this. So I could just go steal this or something bad.
M: Take it home with me. Yeah. There needs to be some kind of fee but affordable enough and $\$ 20$ feels right.
R: Yeah, and you should have to have your ID.
M: Like driver's license. Yeah, yeah. Some kind of accountability.
R: Yeah. Like Glenn was saying, because you could just steal it. But if you have your ID as long as, well obviously we're not going to get into the fake IDs, but it'd be less chance to get the person's stuff stolen or whatever.
M: Okay. Okay. All right. Are there any other things that would encourage or discourage you that are not listed?
R: Yeah. Nasty water. Something like that. Or if you're going to like, dealing was saying earlier about nasty water. The last thing you want to do is go up there and start smelling.
M: A Funky smell. Funky smells coming from the water or polluting or litter.
R: Yeah, litter everywhere. That kind of thing. That would just be discouraging.
$\mathbf{R}$ : What about too much grass? Like if you're in a public area that the state controls. They should have someone take care of the grass. Cause you don't have it up to your leg and dress when you're trying to go.
M: And that's a little dangerous because you don't know. Someone mentioned that they encounter water snakes sometimes.
R: Yeah. You can get snakes that crawl in the grass.
M: Right.
R: $\quad$ So it's better to be able to at least look down, see a little bit.
M: Yeah. That's, I mean, of a reasonable size that you could see where you're stepping.
R: Yeah.
M: Right. Okay. Okay, let's go to the next section then. All right, we're going to go back to those statements. Okay, so here's a statement after all the things we discussed. Just keep this in mind. I want, how about you? Your personal, individual self. I don't want to know about your wife. I don't want to know about your relatives. I don't want to know about anybody. I want to know about you. How much do you agree with this statement? You personally. I want to do more to help make local creeks, rivers, and lakes healthier. How much do you agree? Strongly, somewhat agree, neutral, somewhat disagree or strongly disagree?
R: Strongly agree.
$\mathbf{M}$ : Strongly agree. Glenn?
R: Yep.
$\mathbf{M}$ : Candy, strongly agree?
R: Strongly, mm-hmm.
M: Dillon?
R: Strongly agree.
M: Okay. What do you see yourselves doing to help that? How do you help to make local creeks, rivers and lakes healthier? You yourself?
R: What you take in and bring into and to the lake. creeks, streams, whatever rivers or anything, you take out. You don't leave anything, any trash or just everything you bring in goes back with you.
M: Like bring a big hefty bag with you and just.
R: Exactly.
M: Just pack everything in there. Make sure you wrap it up and bring it back with you. Do not leave anything there.
R: Don't leave anything.

## Segment F: Rural 2; July 11, 2022

$\mathbf{M}$ : Okay. Dillon, any ideas?
$\mathbf{R}$ : Yeah, with the garbage. I actually don't mind picking up other people's recyclables and garbage to help out if they needed help. If I knew of someplace that needed help, I wouldn't mind that.
$\mathbf{M}$ : Like a river cleanup activity, like cleaning by the shore.
R: I like that.
R: I wouldn't mind volunteering for that if there was any of that.
M: Yeah, there's like groups like Keep America Beautiful are some of the nonprofit organizations that have clean up in different water sites or natural places.
$\mathbf{R}$ : Do you know who Mr. Beast is on YouTube?
M: No, I don't. Who's Mr. Beast?
$\mathbf{R}$ : This has to do with our topic. If he donated $\$ 1$ to the company, it cleared one pound of garbage off of water areas all around the US.
$\mathbf{M}$ : Wow. Oh, that's interesting.
R: Oh my goodness.
M: And there were some people that donated anonymously. Obviously businessmen. Some people donate hundreds of thousands, millions. Oh my goodness.
R: Mr. Beast, he's a YouTuber, but he does stuff like he gives away money. He's more of, to me, he is the most generous person I've ever heard of because he still has nice stuff. But he does stuff like that. Last year he planted trees. Every dollar that was donated
M: Believe it or not, that helps clean up waterways.
$\mathbf{R}$ : They planted a certain amount of trees.
M: Yeah, trees.
R: $\quad$ So yeah, I was just thinking of him because it kind of fits our topic.
$\mathbf{M}$ : Yeah, it does. Okay. Candy, can you think of ways that you yourself can help make local creeks and rivers healthier?
R: I like that idea. Keep America Beautiful?
M: Yeah, it's an organization that organizes these cleanup like beaches and rivers and lakes. And you can sign up in your local, sometimes elementary schools. They do things in elementary schools. Sometimes they do things with different organizations. Maybe a senior's program or Girl Scout or whatever. Sometimes they affiliate themselves with that. But yeah, that's one that it's been around for a long time.
R: Right.
M: So Candy, what do you do if you said you strongly agree, you want to do more to help make local creeks and rivers healthy?
R: I will probably.
$\mathbf{M}$ : What could you do?
R: Actually contact them and ask them if there's something that I can volunteer at. I'm not sure about actually walking by the river and picking up trash.
M: Maybe sending out postcards.
R: Yes.
M: To something that's more in line with your physical condition that you can do.
R: Right.
M: $\quad$ Right. Absolutely. Okay. All right.
R: $\quad$ Finding trees would be good too. Like you said, I wasn't thinking of that.
M: Maybe good, yeah. But planting trees in an area that maybe doesn't have enough trees that should have trees, but for some reason.
R: Yeah, better air quality.
M: Yeah, absolutely and better water quality. Trees also helps in with water quality because they filter.
R: Oh yeah.
M: A lot. Especially when you have trees close to waterways. Some people think that bringing people in contact with nature and especially the water, makes them care about the natural environment and want to do more to protect it. Other people think that just spending more time out there in nature or near the water doesn't translate into caring more. So if you expose people to natural landscapes, does it mean that they'll care

## Segment F: Rural 2; July 11, 2022

more for it? Or does it, doesn't make a difference? How do you guys feel about that? And we're almost done, by the way. You're doing wonderful. Candy, how about you went like this and then Dillon. It's kind of like, yeah! No, no, but you kind of rubbing out of thought there. So Candy and then Dillon and then Glenn.
R: I think it will teach people a love and a respect for nature if you take them out of their environment. I would love to see, what is that organization called? Clean Air.
M: Oh, that, the Clean Air Fund. The Clean Air Fund.
R: From the city and those two.
M: Oh, the Fresh, it's called the Fresh Air Fund. I think, yeah. Not clean air, Fresh Air Fund. Yes.
R: $\quad$ They can be taught in appreciation and how to take care of the land and have to take care of the water and to actually be able to relax in nature. You can't teach that. You have to show that.
M: You have to experience it.
$\mathbf{R}$ : You have to experience it.
M: Okay, Dylan?
R: Well, the fresh air should make some people feel happier, but depends on what they want to take in. Obviously some people just don't care about being by the water or outdoors, but it can open up people so like, more options of what to do on the water. If there's like boats nearby or people fishing, they could try to talk to somebody and just learn something new.
M: So maybe some educational portion should be available so that, for those people who don't give a crap, and excuse my French. So those people that don't give a crap about anything and they're out there, they can learn something and take something with them to wherever they go. Okay. All right. And Glenn, what do you think of this? Does some people think that bringing people in contact with nature and especially the water, makes them care more about the natural environment or not?
R: I think $85 \%$ would care. And I think you got $15 \%$ of the people who just could give, like you said, give a crap less. I mean, they don't care. Mean you could take the boy out of the city, but you can't take the city out of the boy a lot of times. And a lot of those guys would rather be right back there in the middle of that mess they came from. And they could care. I've known people like that. Then they're like, I don't want to be out here. This is, there's nobody around. There's too many, There's people that would rather be shoulder to shoulder all the time.
M: It's because that's what maybe they're used to.
$\mathbf{R}$ : And then you take them and show them different and they're like, they, they're lost.
M: Right.
R: $\quad$ They'd rather go back to what they knew.
M: So if there's an educational component, like Dillon was saying.
R: It might help. But I don't think it could help all.
M: $\quad$ Maybe that $15 \%$ can be $11 \%, 10 \%$ ?
R: Could be maybe $10 \%$. But then find that group that's just, they don't care.
M: Yeah.
R: Care less about the environment, they couldn't care less.
M: I think that if we can take that $15 \%$ of those people that really don't care and maybe give them a little bit of that education and hey, this is how you could do this and that. And I don't know, make it more about them enjoying the nature as opposed to them being outside of their natural environment, which is a city. If we could convert out of that $15 \%, 3 \%$.
R: $\quad$ That'd be helpful.
R: I think that would be wonderful.
M: I mean, because we already know that you cannot fix, you can't change all minds.
R: Yeah.
$\mathbf{R}$ : Another problem is social media and cell phones.
R: Okay.
M: Well, how about we do more on social media? We could do social media campaigns, also. If they opt in, of course on Met for messages.
R: But some people.
R: You'd have the people who were on social media all the time, that can't, when they get out there, they can't get on social media. So they'd be upset. Cause they can't be on social media.

## Segment F: Rural 2; July 11, 2022

M: Or right, but here's this, what if we grant, maybe there's a contest, like a TikTok contest where, hey, show your favorite place in nature. I don't know, I'm just do a little cute video of how to have fun outdoors. But make it so that, let's say Candy's grandsons can relate.
R: Yes.
M: We're really trying to get that youth, especially those that are latchkey kids and kids that play video games all day. Sorry, Dillon.
R: It's all good.
M: Get them outside. Okay. Well you have been a fantastic group at the last question. So I want you to close your eyes or go to that space in your mind. If you don't want to close your eyes, look out where you find dreams and go free with your thoughts and think about your ideal public water access site. Make a list for me. Make that list. Envision it. All the things that you want in the world that could possibly, that brings you that piece, that brings you that calm, that brings you that serenity, that illumination, that zen moment meant or that enjoyable, fun of being in touch with your inner self through the sound of that water. So Candy, give me your spot. Describe it to me.
R: It wouldn't have to be near the mountains. It would have to have excellent sunsets.
M: So, spectacular views.
R: $\quad$ Spectacular views. A sandy beach where you can walk in the water if you want a place to have a little picnic if you choose to or a bench. Other people can be around, but not a lot of other people.
M: Some people, we want the Goldilocks amount of people.
R: Yes, and so quiet that you can actually hear the water.
M: Is that it? Let's go, Candy. Let's go. Let's get the car ready. Let's go.
R: That's it.
M: Okay. Wonderful. Okay, Dillon. Dillon, I want to bring you to the outdoors. I want you to schedule your video time and get you back into the outdoors. So what's it going to be? What place do I have to build to get you to schedule more outdoor time? Describe to me your place.
R: Like a country area. Small, small lake.
M: $\quad$ So a small lake.
R: With a picnic area and the garbage and recycling bins around.
M: Yeah, yeah. Trash on one side. Recycling on the other. Okay.
R: Yeah or you can fish.
M: A little fishing. Okay.
$\mathbf{R}$ : And if it's in a bigger area, maybe like a small kids area.
M: Playground.
R: Playground, picnic tables, stuff like that. That's about it. Just the country area was, well, the grass should be kept.
M: Yeah, well kept grass.
R: Well kept grass.
M: Would you go? How many times would you go to this place that you're describing?
R: If it was nearby and I had a way to get there then.
$\mathbf{M}$ : If there was public transportation that had a bus stop there or train stop nearby.
R: Maybe once a weekend.
M: Okay, all right. That's awesome. How far would be too far?
R: Maybe 15 miles plus is kind of far.
M: Okay.
R: Within 10 miles maybe would be good.
M: Okay, so within 10 miles from your home. Perfect. Anything else?
R: $\quad$ Not that I can think of right now.
M: Okay. Okay. And Glenn, describe to me your place. Your special outdoor water area.
R: It has to be place called Hayden Valley in Yellowstone. Hayden Valley in Yellowstone.
M: Describe it to me.

## Segment F: Rural 2; July 11, 2022

| R : | It's a valley and it's got streams and running through it and like swampy areas, but not swamp. It's just not really swampy, it's just marshland area. |
| :---: | :---: |
| M: | It's not Tampa. Tampa alligator swamps. |
| R: | Yeah. No. Okay. Not in Yellowstone. Every type marshlands I would say. |
| M: | Yeah, marsh. |
| R: | And you could see. |
| M: | Like wetlands. Wetlands area. |
| R: | Yeah. You could see the mountains in the background and then near. But it's all hilly going down into it and it's really beautiful. |
| M: | Okay so Glenn, can you envision us taking that place similar and transporting it close to your area within $X$ amount of miles? |
| R: | I'd love to. |
| M: | Okay. So how far would be too far? Like let's say within your vicinity, where you live, where you reside. How far would be too far? An hours drive. Half an hour's drive. |
| R: | Yeah. An hours drive. I would go. |
| M: | That would be your limit. |
| R: | Yeah. If I could see that again and camp out there again. Yeah. |
| M: | I mean I doubt you could get the Rockies up in where you live, but. |
| R: | No. |
| M: | Maybe some hills, we can get some hills. |
| R: | Yeah. Yeah. You couldn't see the mountains, the big rocky mountain things in the background. But you could see. You'd be where right there with the hills are in the valley and that. |
| M: | What about any amenities close by or you know, what amenities do you see? |
| R: | That wouldn't bother me a bit. Cause I'd camp out. That's what I would do anyway. That's what I did. There is camp. Okay.We hiked in and camped there, so. |
| M: | Okay, So it was just you and the stars? |
| R: | Yep. |
| M: | And the bears. |
| R: | Oh yeah. Little bears. |
| M: | Okay. Oh no. Well, I think I would need a moose gate. |
| R: | Yeah. |
| R: | Yes. |
| R: | Well, Yellowstone's got every kind of wildlife you can imagine. |
| M: | Yeah, I know. I know. All right. Well, I want to give you all a round of applause. You did it! Give yourselves a round of applause. You are awesome. Thank you so very much. You made my job a lot easier and it was so much fun speaking with you today. Thank you for sharing your thoughts. Of course, Candy is the winner of the early bird. You're going to get $\$ 150$. And Glenn and Dillon are going to get a hundred dollars. Easy money. |
| R: | Yes. |
| M: | Easiest money you'll make. All right. Well thank you so much. I wish that you get outdoors very soon and have fun in the open space. |
| R: | Amazing. |
| M: | Okay, there you are. You're already there. Okay, you so much Bye bye. |
| R: | Thank you, bye. |
| R: | Thank you. |
| R: | Have a good night. |
| M: | Thank you, you too. Take care. |
| R: | Bye-bye. |
| M: | Bye. |
| R: | Nice meeting you guys. |
| M: | Likewise. |

Segment F: Rural 2; July 11, 2022
R: Yeah. Nice meeting you. See you.

| Moderator | [00:00:04]-[00:00:40] | Yo, bueno eso fue Steve que me está ayudando con todo eso. Yo hablo mucho con las manos, yo cuando la boca la tengo abierta las manos están en el aire. No voy a tomar notas, Steve me va a ayudar un poco con lo que van a ver en pantalla, y él va a tomar algunas notas, pero el pobre de Steve no entiende español, pero vamos a traducir todos los comentarios, pero lo bueno del caso es que su participación es anónima y confidencial. | Me, well that was Steve who is helping me with all that. I do a lot of talking with my hands, when my mouth is open my hands are in the air. I'm not going to take notes, Steve is going to help me a little bit with what you are going to see on screen, and he is going to take some notes, but poor Steve doesn't understand Spanish, but we are going to translate all the comments, the good thing is that his participation is anonymous and confidential. |
| Moderator | [00:00:41] - [00:01:09] | No vamos a usar su nombre o imagen en el resumen que tenemos que presentar a nuestros clientes, que tienen que ver con servicios públicos. Ah, mira Cajuan está con nosotros también, lamentablemente no puso ser parte de la rifa, pero vamos a ver. <br> - ¿Está Cajuan? <br> - ¿Hello? <br> Ah, bueno están conectando al audio. | We are not going to use your name or image in the summary that we must present to our clients, which have to do with public services. Ah, look Cajuan is here with us too, unfortunately he didn't get to be part of the raffle, but let's see. <br> - Is Cajuan there? <br> - Hello? <br> - Oh, well, they are connecting to the audio. |
| Moderator | [00:01:09] - [00:01:11] | Bueno pues, seguimos. Hola Cajuan, ¿puedes escuchar? | Well then, we continue, hello Cajuan, can you hear me? |
| Cajuan | [00:01:11] - [00:01:15] | Sí, sí puedo escuchar. | Yes, I can hear you. |
|  | [00:01:15] - [00:01:26] | Puede escuchar okay, muy bien. Tenemos, simplemente estamos ya empezando, ¿es así como digo tu nombre Cajuan? | You can hear me okay, all right. We're just getting started, is that how I say your name Cajuan? |
| Cajuan | [00:01:26] - [00:01:28] | Sí, está bien. | Yes, it's all right. |
| Moderator | [00:01:29] - [00:02:07] | Okay, pues, gracias. Estamos ahora simplemente explicando lo que va a suceder y como lo estamos haciendo, su participación es anónima y confidencial, les pido que por favor hablen uno a la vez ya que estamos grabando, pero no vamos a usar su imagen ni su nombre, en el resumen que vamos a presentar al cliente de servicios públicos. Lo que si quisiera es que todo el mundo hable su opinión | Okay, well, thank you. <br> We are now simply explaining what is going to happen and how we are doing it, your participation is anonymous and confidential, I ask you to please speak one at a time as we are recording, but we are not going to use your image or your name, in the summary that we are going to present to the public services client. |

|  |  |  |
| :--- | :--- | :--- |
| Moderator | [00:02:07] - [00:02:52] | Que no se sientan mal, si <br> vamos a decir tiene una <br> opinión que va en contra de lo <br> que el grupo está diciendo, <br> porque es muy importante <br> para mí escuchar la opinión <br> de todos. No se sientan <br> cohibidos de, hey quizá el <br> grupo no se siente de esa <br> forma, pero yo sí y no quiero <br> decir que aquello. Por favor <br> toda opinión cuenta, así como <br> dice el nombre "pinión |

What I would like is for everyone to speak their opinion.
Don't feel bad if you have an opinion that goes against what the group is saying, because it is very important for me to hear everybody's opinion. Don't feel self-conscious like, hey maybe the group doesn't feel that way, but I do and I don't want to say that. Please every opinion counts so as the name says "opinion works" that is, all opinions are included and they work for us. Just like if I haven't heard or listened to someone's opinion, I'm going to call you by your name.

|  |  | llamar por su nombre. |  |
| :---: | :---: | :---: | :---: |
| Moderator | [00:02:53] - [00:03:35] | Y no quiero que se sientan como que ay, me están señalando. No, no se sienta así, porque es importante que cada persona nos diga su opinión, o sea que no se sienta que lo estoy señalando, ¿okay? <br> Y también, esto no es un examen esto es toda opinión cuenta no hay respuestas correctas ni incorrectas. Todas las opiniones cuentan en este grupo ¿okay? Y nada, eso es lo único que tengo que decir. ¿Hay alguna pregunta para mi antes de empezar? ¿Juan? | And I don't want you to feel like "oh, you are pointing me put", no, don't feel that way, because it is important for each person to tell us their opinion, so that you don't feel that I'm pointing out, okay? And also, this is not an exam, this is every opinion counts, there are no right or wrong answers. All opinions count in this group, okay? <br> And that's all I have to say, are there any questions for me before we start? ¿Juan? |
| Moderator | [00:03:35] - [00:03:43] | Aquí hay un Juan y un Cajuan, ¿Juan, está bien? ¿Cajuan tiene alguna pregunta para mí? | There is a Juan and a Cajuan here, Juan, is it okay? Does Cajuan have any questions for me? |
| Cajuan | [00:03:43] - [00:03:47] | No, no hay preguntas. | No, no questions. |
| Moderator | [00:03:47] - [00:03:50] | Okay, muy bien, ¿Erica tiene pregunta para mí? | Okay, all right, Erica do you have any questions for me? |
| Erica | [00:03:50] - [00:03:52] | No hasta ahora. | Not so far. |
| Moderator | [00:03:52]- [00:03:54] | Okay, Betty. | Okay, Betty. |
| Betty | [00:03:54]- [00:03:55] | No. | No. |
| Moderator | [00:03:55] - [00:04:59] | Okay, muy bien. Bueno, pues vamos a empezar con la pregunta simplemente presentándonos un poco sobre nosotros, donde vivimos, con quienes vivimos | Okay, very good. Well, we are going to start with the question by just introducing a little bit about ourselves, where we live, who we live with and |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | y un recuento de su día típico, <br> y obviamente no se van a recordar de todo esto, pero yo le voy a dar, yo le hago la pregunta cuando ya estemos contestando. Yo voy a empezar primero con la ganadora Erica, esta es la pregunta y luego vas a contestar las voy a decir todas, ¿Dónde vives?, con eso me refiero a la ciudad, donde viven o el estado, ¿con quienes vive?, viven con familia, con roomates, con compañeros de casa, o solo, y después me da una idea de su día típico. | a recount of your typical day, and obviously you are not going to remember all of this, but I'm going to ask you the question when you are already answering. I'm going to start first with the winner Erica, this is the question and then you are going to answer them all, where do you live, by that I mean the city, where you live or the state, who do you live with, do you live with family, with roommates, or alone, and then give me an idea of your typical day. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:04:59] - [00:05:37] | Trabajas, te quedas en casa, llevas a los niños a la escuela, estudias, lo que sea, y después la última pregunta tiene que ver con dos cosas número 1 las cosas que le preocupan a usted, puede ser individual o familiar o algo global como de las noticias y después lo opuesto algo que le da esperanza, que le da gozo, que le da alegría o satisfacción. ¿okay?, ahora, Erica, ¿Dónde vives? | Do you work, do you stay at home, you take the kids to school, you study? Whatever. And then the last question has to do with two things number 1, things that concern you, it could be individual or about family or global like from the news; and then the opposite something that gives you hope, that gives you joy, that gives you happiness or satisfaction. Okay, now, Erica, where do you live? |
| Erica | [00:05:37] - [00:05:40] | Yo vivo en Centreville, | I live in Centreville, |
| Moderator | [00:05:40]-[00:05:42] | ¿Dónde es eso? | Where is that? |
| Erica | [00:05:42] - [00:05:44] | En Centreville, Virginia. | Centreville, Virginia. |
| Moderator | [00:05:44] - [00:05:46] | Okay, y ¿con quienes vive? | Okay, and who do you live with? |
| Erica | [00:05:46] - [00:05:47] | Con mis padres. | My parents. |
| Moderator | [00:05:47] - [00:05:53] | Okay, y dame una idea de tu día típico. | Okay, and give me an idea of your typical day. |
| Erica | [00:05:53] - [00:06:15] | Mi día típico bueno levantarme, atender a mi perrito alistarme para el trabajo, las 8 horas en el trabajo y de ahí regresar a de nuevo atender a mi perrito $y$ esa es casi mi rutina. | My typical day well get up, take care of my puppy get ready for work, 8 hours at work and then I go back to take care of my puppy and that's pretty much my routine. |
| Moderator | [00:06:15] - [00:06:21] | Okay, y algo que te preocupa y después lo opuesto, algo que te da alegría o satisfacción. | Okay, and something that worries you and then the opposite, something that gives you joy or satisfaction. |
| Speaker |  | Me preocupa la subida del gas, es que ya está bajando poquito por poquito | I'm worried about the gas going up, it's already going down a little bit at a time. |
| Moderator | [00:06:21] - [00:06:22] | No lo suficiente. | Not enough. |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |

Segment G: Spanish language group, English translation; July 10, 2022

| Erica | [00:06:22] - [00:06:52] | No lo suficiente, pero lo importante es que las cosas que están pasando en la frontera es otra de las cosas mucha gente de nuestra raza está por querer tener este sueño americano pasan por muchos problemas. | Not enough, but the important thing is that the things that are happening at the border, is another thing that many of our people are going through a lot of problems because they want to have this American dream. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:06:52] - [00:06:55] | Y de dónde, ¿de dónde es tu familia? | And where, where is your family from? |
| Erica | [00:06:55] - [00:06:57] | Mi familia es peruana. | My family is Peruvian. |
| Moderator | [00:06:57] - [00:07:05] | Peruana, de Perú y algo que te da alegría gozo, satisfacción. | Peruvian, from Peru and something that gives you joy, satisfaction. |
| Erica | [00:07:05] - [00:07:08] | Alegría gozo, mis padres y mi perrito estar con ellos siempre. | Happiness, joy, my parents and my little dog being always with them, |
| Moderator | [00:07:08] - [00:07:18] | Amén muy bien, Erica, ¿puedes escoger una persona para que vaya de seguido? | Amen very well, Erica. Can you pick one person to go next? |
| Erica | [00:07:18] - [00:07:22] | Ah, el que acaba de entrar ultimo. Juan. | Ah, the one who just came in last, Juan. |
| Sherleyq | [00:07:22] - [00:07:24] | Cajuan, okay. Cajuan hola, ¿Cómo estás? | Cajuan, okay. Cajuan hi, how are you? |
| Cajuan | [00:07:24]- [00:07:26] | Hola, ¿Cómo estás? | Hello, how are you? |
| Moderator | [00:07:26] - [00:07:37] | Cajuan, las preguntas son te las voy a dar y después contestas, ¿Dónde vives? | Cajuan, the questions are, I'm going to give them to you and then you answer, where do you live? |
| Cajuan | [00:07:37] - [00:07:39] | Yo vivo en Washington D.C. | I live in Washington D.C. |
| Moderator | [00:07:39] - [00:07:42] | Okay, y ¿con quienes vive? | Okay, and who do you live with? |
| Cajuan | [00:07:42] - [00:07:45] | Vivo con mi hermana y sus hijos. | I live with my sister and her children. |
| Moderator | [00:07:45] - [00:07:54] | Que están ahí que oigo de fondo. Dame una idea de tu día típico Cajuan. | They're there I can hear them in the background. Give me an idea of your typical day Cajuan. |
| Cajuan | [00:07:42] - [00:08:08] | Mi día típico me levanto y también [inaudible] salgo para que use el baño, su comida su agua | My typical day I get up and [inaudible] I go out so he can use the bathroom, his food, his water. |
| Moderator | [00:08:08] - [00:08:10] | ¿Es el perrito? | Is it the puppy? |
| Cajuan | [00:08:10] - [00:08:36] | Si, mi perro, después es verano entonces voy al trabajo como a las 4 en la mañana juego videogames y a las 4 me voy regreso del trabajo en la noche como a las 10 ya como y me voy a dormir. | Yes, my dog, and then it's summer so I go to work at about 4 o'clock, in the morning I play videogames and at 4 o'clock I leave and come back from work at night at about 10 o'clock, then I eat and go to sleep. |
| Moderator | [00:08:36] - [00:08:39] | Bien, y ¿de dónde es su familia? | Well, where is your family from? |
| Cajuan | [00:08:39] - [00:08:44] | Mi papa es de Perú, y mi mamá es de aquí. | My dad is from Peru, and my mom is from here. |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:08:44] - [00:08:52] | Okay, okay y algo que te preocupa y al opuesto algo que te da felicidad, satisfacción. | Okay, okay and something that worries you, and on the other hand something that gives you happiness, satisfaction. |
| :---: | :---: | :---: | :---: |
| Cajuan | [00:08:52] - [00:08:59] | Lo que me preocupa es la matadas que están haciendo aquí en las grocery stores, en supermarkets. | What worries me is the killings they are doing here in the grocery stores, in supermarkets. |
| Moderator | [00:08:59] - [00:09:02] | El crimen, el crimen. | The crime, the crime. |
| Cajuan | [00:09:02] - [00:09:05] | Porque ha subido... | Because it has gone up... |
| Moderator | [00:09:05] - [00:09:10] | Pero me está hablando de las matanzas | But you are telling me about the killings |
| Cajuan | [00:09:10] - [00:09:28] | Si, en las escuelas, supermarket porque han subido en estos años había cada uno años, pero este año han sido un montón | Yes, in the schools, supermarkets because they have gone up in these years there were shootings every other year, but this year there have been a lot. |
| Moderator | [00:09:28] - [00:09:31] | Ósea cada otro día, sucede una matanza. | So, every other day, there's a killing. |
| Cajuan | [00:09:31] - [00:09:33] | Exacto. | Exactly. |
| Speakar 1 | [00:09:35] - [00:09:39] | Eso y la guerra con Rusia, | That and the war with Russia, |
| Speaker | [00:09:39] - [00:09:43] | Si con Rusia, eso es algo preocupante | Yes, with Russia, that is a worrying thing |
| Speaker | [00:09:43] - [00:09:52] | Porque no sé cómo se va a seguir a eso si vamos a tener que luchar o si se va resolver | Because I don't know how it is going to continue if we are going to have to fight or if it is going to be resolved. |
| Moderator | [00:09:52] - [00:09:57] | No se sabe algo que te da felicidad o satisfacción | We don't know. And what gives you happiness or satisfaction? |
| Cajuan | [00:09:57] - [00:10:06] | Bueno, cada día me da felicidad, me gusta disfrutar la vida cada día me gusta... | Well, every day gives me happiness, I like to enjoy life, every day I like to... |
| Moderator | [00:10:06] - [00:10:09] | ¿Los videogames te dan mucha felicidad? | Videogames give you a lot of happiness, |
| Cajuan | [00:10:09] - [00:10:15] | Si los videogames, si eso es mi vicio. | Yes, videogames, yes, that's my vice. |
| Moderator | [00:10:15] - [00:10:27] | Es tu vicio, okay muy bien, pues muchas gracias Cajuan. ¿Quién va tu tocayo Juan o Bety? | It's your vice, okay very well. Well thank you very much Cajuan, who goes next, Juan or Bety. |
| Cajuan | [00:10:27] - [00:10:29] | Vamos a Bety | Let's go with Bety |
| Moderator | [00:10:29] - [00:10:34] | okay Bety sigue y luego terminamos con Juan ¿okay? Okay, Bety ¿cómo está? | Okay Bety, go ahead and then we'll finish with Juan, okay? Okay, Bety, how are you? |
| Bety | [00:10:34] - [00:10:52] | Como está Moderator, como está cada uno de los participantes del grupo, mucho gusto, soy Bety Cifuentes, soy casada tengo dos hijos, tengo cuatro nietos, pets. | How are you Moderator, how are each one of the participants of the group, nice to meet you, I am Bety Cifuentes, I am married, I have two |

|  |  |  | children, I have four grandchildren, pets. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:10:52] - [00:10:58] | Pero tiene los nietos con pelos, como peluche | But you have grandchildren with fur, like stuffed animals. |
| Bety | [00:10:58] - [00:11:05] | Dos guineas pigs y dos perritos | Two guinea pigs and two puppies |
| Moderator | [00:11:05] - [00:11:08] | ¿y en dónde vives Bety? | And where do you live, Bety? |
| Bety | [00:11:08] - [00:11:10] | Vivo en Centreville | I live in Centreville |
| Moderator | [00:11:10] - [00:11:18] | En Centreville, Virginia, okay y otra preguntita ¿de dónde es su familia? | In Centreville, Virginia, okay and another question where is your family from? |
| Bety | [00:11:18] - [00:11:20] | Soy de Peru, y vivo acá con 21 años viviendo acá | I'm from Peru, and I have been living here for 21 years. |
| Moderator | [00:11:20] - [00:11:26] | Ah muy bien, a mí se me olvido decir que mi familia es dominicana y nací aquí | Ah very well, I forgot to say that my family is Dominican and I was born here. |
| Bety | [00:11:26] - [00:11:30] | Pero yo lo saque rápido. | But I picked on it fast. |
| Moderator | [00:11:30] - [00:11:35] | El acento, sí mi acento siempre va por ahí. | The accent, yes, my accent always gives it away. |
| Bety | [00:11:35] - [00:11:42] | Y por el apellido también, tengo un conocido Marter | And the last name too, I have an acquaintance Marter. |
| Moderator | [00:11:42] - [00:11:58] | Marter sí, ese apellido viene con de la gente del norte de lo que llamamos el Sibao, es una región agrícola allá muy | Marter yes, that surname comes from the people of the north of what we call Sibao, it is an agricultural region there. |
| Bety | [00:11:58] - [00:12:10] | Mi esposo, en la escuela trabaja, pero en la anterior escuela trabajo con un muchacho que se apellidaba Marter, | My husband works at the school, but in the previous school he worked with a boy whose last name was Marter, |
| Moderator | [00:12:10] - [00:12:13] | Qué bueno, puede ser primo mío no se sabe | That's good, he may be my cousin, I don't know. |
| Bety | [00:12:13] - [00:12:17] | Que vino de New York, no sé si | Who came from New York, I don't know if |
| Moderator | [00:12:17] - [00:12:43] | Si, estamos la mayoría de nosotros, mis papás bueno mi papá vino en los años 50 y mi mamá en los años 60 me apellido Marter por parte de mi papá. Seguimos con usted Bety, deme un trayecto de su día típico. | Yes, most of us are here, my parents, well my dad came in the 50 's and my mom came in the 60's, my last name is Marter on my dad's side. Let's continue with you Bety, give me a little bit of your typical day. |
| SBety | [00:12:43] - [00:12:54] | Me levanto muy temprano un cuarto para las 5 de la mañana, ahorita en el summer school, primer summer que estoy trabajando | I get up very early, a quarter to 5 in the morning, right now in summer school, first summer I am working. |
| Moderator | [00:12:54] - [00:12:56] | O sea, en el verano | I mean, in the summer |
| Bety | [00:12:56] - [00:12:58] | En el verano, | In the summer, |

Segment G: Spanish language group, English translation; July 10, 2022

| Bety | [00:12:58] - [00:13:24] | Si, primer summer que trabajo, yo trabajo para las escuelas de Fairfax, y trabajo con niños especiales y primer año que estoy trabajando en el verano la verdad que a mí no me gusta mucho, el verano, el calor, me gusta el sol, me gusta estar con luz, pero no me gusta estar bajo... | Yes, first summer that I work, I work for the Fairfax schools, and I work with children with special needs and this is the first year that I'm working in the summer. The truth is that I don't really like the summer, the heat, I like the sun, I like to be in the light, but I don't like to be under the... |
| :---: | :---: | :---: | :---: |
| Moderator | [00:13:24]-[00:13:27] | Es la humedad severa | It is the severe humidity. |
| Bety | [00:13:27] - [00:13:46] | Si es demasiado, el 70 o 75 soy feliz, pero más no. Pero bueno en mi día es así, estoy trabajando, empecé el 22, no el 27 de junio, hasta el 22 de julio voy a trabajar. | Yes, it is too much, 70 or 75 I'm happy, but no more. Anyways, my day is like that, I'm working, I started on June 22, no, June 27, and I'm going to work until July 22. |
| Moderator | [00:13:46] - [00:13:48] | Espero que disfrute un poco del verano en casa, | I hope you enjoy a bit of the summer at home, |
| Bety | [00:13:48]-[00:13:51] | Ya me quedan dos semanas | I have two weeks left. |
| Moderator | [00:13:53]-[00:13:55] | Ah bueno, qué bien | Ah well, that's good |
| Bety | [00:13:55] - [00:14:00] | Ya me faltan dos semanas para terminar el Summer School, | I'm already two weeks away from finishing Summer School. |
| Moderator | [00:14:00]-[00:14:07] | La tanda, de okay. Algo que le preocupa y una cosa que le da felicidad, satisfacción. | The season, okay. Something that worries you and one thing that gives you happiness, satisfaction? |
| Speaker | [00:14:00]-[00:14:45] | Me da felicidad mi familia primeramente y compartir con mi familia soy mucho de casa no me gusta mucho salir, salgo con ellos a desayunar cualquier cosa que hacemos juntos. También me gusta mis amistades que comparto siempre con mi esposo compartimos salida en grupo con amigos, que también son parejas de diferentes edades, pero son parejas | My family gives me happiness first and foremost and sharing with my family, I'm very much at home, I don't like going out much. I go out with them to have breakfast whatever we do together. I also like my friends, I always share with my husband, we go out in a group with friends, who are also couples of different ages, but they are couples. |
| Moderator | [00:14:45] - [00:14:47] | ¿Algo que te preocupa? | Something that worries you? |
| Bety | [00:14:47] - [00:14:55] | Me preocupa, me preocupa muchas cosas aquí, todo lo que han hablado desde un principio que es... | I'm worried, I'm worried about many things here, everything that you have talked about from the beginning, which is... |
| Moderator | [00:14:55] - [00:14:57] | La gasolina, la alza de los precios | Gasoline, the rising prices |
| Bety | [00:14:57] - [00:15:14] | Los alimentos que están carísimos, el pollo subió | Groceries are very expensive, chicken has |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | demasiado, las papas subieron demasiado, todo ha subido demasiado, quizá los jóvenes no se dan mucha cuenta de eso, pero la verdad | gone up too much, potatoes have gone up too much, everything has gone up too much, maybe young people do not realize this, but the truth is that everything has gone up too much, |
| :---: | :---: | :---: | :---: |
| Moderator | [00:15:14] - [00:15:17] | Pero los jóvenes lo mencionaron como Erica y Cajuan | But the youngsters mentioned it as Erica and Cajuan |
| Bety | [00:15:17] - [00:15:20] | Sí, pues del gas, pero no de la comida | Yes, gas, but not food. |
| Sherley | [00:15:20]-[00:15:22] | Sí, la comida también sí | Yes, the food too. |
| Bety | [00:15:22] - [00:15:30] | Ha subido demasiado, demasiado, una bolsa de cinco libras de papas rosadas que yo la compraba pues un poco cara | It has gone up too much, too much, a five-pound pink potato bag that I used to buy was a bit expensive. |
| Moderator | [00:15:30]- [00:15:32] | A uno o dos dólares | At one or two dollars |
| Bety | [00:15:32] - [00:16:02] | 2.99 porque era, cara la más cara es la rosada o la boss, esas las compraba más cara, la compre ayer en 8.49, de cinco libras, así me quede yo wow. Quería hacer una comida especial, la había comprado, igual la papa blanca que costaba siempre tan barata, siempre económica la otra. | 2.99 because it was, expensive. The most expensive is the pink one or the boss was more expensive. I bought it yesterday at 8.49 , five pounds, that's what I said, wow. I wanted to make a special meal, and I bought it bought, just like the white potato that was always so cheap. |
| Moderator | [00:16:02] - [00:16:03] | Sí. | Yes. |
| Bety | [00:16:03] - [00:16:24] | La Yukón, pero, normalmente todo está caro, el pollo ha subido demasiado, son cosas que me preocupan porque de una u otra manera administro mi casa, mi hogar, veo que coma bien mi familia | The Yukon, but usually everything is expensive, chicken has gone up too much. These are things that worry me because in one way or another I manage my house, my home, I make sure my family eats well. |
| Moderator | [00:16:24] - [00:16:32] | Tu familia, sí, claro. Bueno pues muchas gracias Bety ahora vamos con Juan. | Your family, yes of course. Well thank you very much Bety, now let's go to Juan. |
| Juan | [00:16:32] - [00:16:33] | Hola | Hello |
| Moderator | [00:16:33] - [00:16:34] | Mucho gusto | Nice to meet you. |
| Juan | [00:16:34] - [00:16:36] | ¿Cómo estás? | How are you? |
| Moderator | [00:16:36] - [00:16:39] | Muy bien gracias juan, ¿dónde vives? | Very well thank you Juan. Where do you live? |
| Juan | [00:16:39] - [00:16:50] | Silver Spring Maryland, yo tengo mi propio condo vivo actualmente solo. | Silver Spring Maryland, I have my own condo, I currently live alone. |
| Moderator | [00:16:50] - [00:16:55] | Okay, y entonces dame una idea de un día típico para ti. | Okay, and then give me an idea of a typical day for you. |
| Juan | [00:16:55] - [00:17:17] | Depende, puede variar depende mi horario, pero me | It depends, it may vary depending on my |

| Moderator | $[00: 17: 17]-[00: 17: 19]$ | $\left[\begin{array}{l}\text { ¿En un equipo o con } \\ \text { amistades? }\end{array}\right.$ |  |
| Juan | $[00: 17: 19]-[00: 17: 20]$ | Un equipo | In a team or with friends? |
| Sherley | $[00: 17: 22]-[00: 17: 34]$ | Oh sí, que bueno <br> Salgo con amistades, un fin de <br> semana voy a visitar a familia, <br> puede variar pero usualmente <br> trabajo de casa pero tengo <br> que ir a la oficina como una o <br> dos veces al mes. | I go out with friends, one <br> weekend I go to visit <br> family, it can vary but I <br> usually work from home <br> but I have to go to the <br> office like once or twice a <br> month. |
| Moderator | $[00: 17: 34]-[00: 17: 43]$ | Muy bien, y algo que te | Okay, and something that |

| Moderator | [00:17:34]-[00:17:43]Muy bien, y algo que te <br> preocupa, y luego lo opuesto <br> algo que te da felicidad y <br> satisfacción. |
| :--- | :--- | :--- |
| suan |  | worries you, and then the opposite something that gives you happiness and satisfaction.

Something that worries me, I think most people have already mentioned it, but I would say the cost, the prices, the high inflation that affects not only here but worldwide. Let's see something that brings me joy, to know that the family and friends are well, if that is practically serious. Okay very well, thank you very much everybody. Now let's start with the topic, the topic has to do with the environment, spending time outdoors, the different services or places where there is public access, especially where there are bodies of water, whether it is a beach or fresh water, I think they call it fresh water.
Water that is river, creek that kind of water, that's what they call it, isn't it? The lakes, yes.
Okay, well, I want to know which activities you like to do outdoors, Juan, I know that since he plays football, he is not doing it indoors, he is doing it

|  |  | está haciendo afuera, ¿Qué otra cosa te gusta hacer al aire libre Juan? | outdoors, what else do you like to do outdoors Juan? |
| :---: | :---: | :---: | :---: |
| Juan | [00:19:09] - [00:19:10] | Ir a la playa. | Go to the beach. |
| Moderator | [00:19:10]-[00:19:11] | ¿A que playa? | Which beach? |
| Juan | [00:19:11] - [00:19:17] | Bueno si es acá, local sería Ocean City | Well, if it's local it would be Ocean City |
| Moderator | [00:19:17] - [00:19:19] | ¿Dónde es eso? | Where is that? |
| Juan | [00:19:19] - [00:19:29] | Maryland, es también en Maryland, pero acabo de regresar de la Republica Dominicana justamente, hace unos tres, cuatro días. | Maryland, it's also in Maryland, but I just came back from the Dominican Republic just about three, four days ago. |
| Moderator | [00:19:29] - [00:19:32] | ¿Fuiste a Punta Cana o a otro lugar? | Did you go to Punta Cana or somewhere else? |
| Juan | [00:19:32] - [00:19:40] | A Punta cana, Bani, San Pedro, Samana y Santo Domingo | To Punta Cana, Bani, San Pedro, Samana and Santo Domingo. |
| Moderator | [00:19:40] - [00:20:21] | Ósea que hiciste ya como una <br> "L", qué bonito. Ahora no vamos yo sé que el agua allá es preciosa, pero vamos a hablar del agua que nos queda alrededor de donde vivimos, no donde vamos a vacacionar sino sabemos que el agua del caribe y de nuestro país es bellísimo, yo sé que Perú he ido a ver proyectos allá en Lima es impresionante ese mar pacífico es tan bello, y obviamente sé los diferentes lugares a donde vivimos. Ah, quería preguntar Juan, ¿de dónde es tu familia de nuevo? | So, you made like an "L", how nice. <br> I know that the water there is beautiful, but let's talk about the water around where we live, not where we go on vacation, but we know that the water in the Caribbean and in our countries is beautiful, I know that Peru...I have been there due to projects there in Lima, it is impressive, that Pacific sea is so beautiful, and obviously I know the different places where we live. I wanted to ask Juan, where is your family from again? |
| Juan | [00:20:21] - [00:20:22] | ¿Mi familia? | My family? |
| Moderator | [00:20:22] - [00:20:23] | Sí. | Yes. |
| juan | [00:20:23]-[00:20:25] | Es de Perú | It's from Peru. |
| Moderator | [00:20:21] - [00:20:56] | Bueno estoy hablando con la banda peruana del GMB, Virginia, Maryland, tanto como Washington D.C. <br> Bueno, vamos a pensar, no en nuestros países, donde sabemos que hay mucha naturaleza, bellezas naturales allá. Vamos a empezar donde vivimos lo más cercano a nosotros, Juan mencionó Ocean City | Well, I'm talking to the Peruvian band from GMB, Virginia, Maryland, as much as Washington D.C. Well, let's think, not about our countries, where we know that there is a lot of nature, natural beauty there. Let's start with the place that's closest to us Juan mentioned Ocean City. |
| Juan | [00:20:56] - [00:21:24] | Ocean City, Rock Creek Park, D.C., es un parque nacional, donde uno puede ir a montar bicicleta, correr si la familia | Ocean City, Rock Creek Park, D.C. is a national park, where you can go ride a bike, run, if the |

|  |  | quiere hacer un barbacue, hacer picnics todo eso uno puede, en esa área son cosas que uno puede hacer aquí en esta zona. | family wants to have a barbecue, if you want to have picnics you can do all that, in that area. There are things that you can do here in this area. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:21:24] - [00:21:49] | Okay, Erica si pasas el tiempo al aire libre a dónde vas, hay parques playas, lugares donde puede nadar, no estoy hablando de piscina, piscina es algo hecho por los hombres, pero queremos hablar de áreas naturales. | Okay, Erica if you spend time outdoors where do you go? There are parks beaches, places where you can swim, I'm not talking about a swimming pool, a swimming pool is something made by men, but we want to talk about natural areas. |
| Erica | [00:21:49] - [00:22:00] | Cerca de mi casa esta se llama Trail, de Manassas Butterfly, algo así se llama de Manassas, so ahí caminamos, se camina, con el perrito a pasear y... | Near my house there is this place called Trail, from Manassas butterfly, something like that is called Manassas, so there we walk, you walk, with the little dog and... |
| Moderator | [00:22:00] - [00:22:05] | ¿Andas siempre con el perrito? | Do you always go with the dog? |
| Erica | [00:22:05] - [00:22:13] | Si, cuando se puede, porque no puede estar encerrado tampoco. | Yes, when I can because he can't be locked up either. |
| Moderator | [00:22:13] - [00:22:18] | Si obviamente, ¿Hay lugares donde hay natación o hay ríos, lagos, playas? | Yes obviously. Are there places where there is swimming or are there rivers, lakes, beaches? |
| Erica | [00:22:18] - [00:22:33] | Es un pequeño riachuelo que está ahí, que está en el medio del camino, pero sé que no se puede nadar, los perros pasan ahí, caminando | There is a small creek that is there, that is in the middle of the road, but I know that you can't swim, the dogs pass there, walking. |
| Moderator | [00:22:33] - [00:22:36] | Pero ¿ ¿puedes mojarte los pies? | But can you get your feet wet? |
| Erica | [00:22:36] - [00:22:38] | Puede ser, pero no me gusta. | Maybe, but I don't like it |
| Moderator | [00:22:38] - [00:23:00] | Okay, entiendo, entiendo. Okay Cajuan, dime, cuando no estas jugando videogames, obviamente, yo quiero saber el tiempo que tu pasas afuera, al aire libre, a donde vas, en que lugares vas. | Okay, I understand, I understand. Okay Cajuan, tell me when you're not playing videogames, obviously, I want to know the time that you spend outside, outdoors, where do you go, what places do you go to. |
| Cajuan | [00:23:00] - [00:23:10] | Aquí en D.C como dijo Juan, en Rock Creek ahí voy constante también a Myrtle Beach... | Here in D.C. as Juan said, in Rock Creek. I go constantly also to Myrtle Beach |
| Moderator | [00:23:10] - [00:23:03] | Eso es South Carolina, | That's South Carolina, |
| Cajuan | [00:23:03] - [00:23:20] | Sí, también he ido a Atlantic City, me gusta ir a downtown, | Yeah, I've also gone to Atlantic City, I like to go |

|  |  | que han ido a un lugar de estos donde puedes remaro alquilar un kayak o alguna de esas actividades o pagar un tour con un barco o alguna de esas cosas? ¿Han hecho algo así? | that have gone to one of these places where you can paddle or rent a kayak, or some of those activities or pay for a tour with a boat or some of those things, have you done anything like that? |
| :---: | :---: | :---: | :---: |
| Speaker | [00:26:02]-[00:26:8] | Hemos hecho kayak en el Shenandoah, pero hay, ahí rentan | We've kayaked in Shenandoah, but there's rentals there. |
| Moderator | [00:26:08] - [00:26:11] | ¿Pero ustedes alquilaron un kayak? | Did you rent a kayak? |
| Speaker | [00:26:11] - [00:26:12] | Sí. | Yes. |
| Moderator | [00:26:12] - [00:26:17] | Okay, Juan ¿ha hecho alguna de estas actividades o no? | Okay, Juan, have you done any of these activities or not? |
| Juan | [00:26:17] - [00:26:22] | Ah, ¿aquí localmente o nacionalmente? | Ah, here locally or nationally? |
| Moderator | [00:26:22] - [00:26:23] | Localmente | Locally |
| juan | [00:26:23] - [00:26:40] | Localmente en Georgetown, ahí puedes hacer kayaking y también puedes en Tidal Basin, por donde están los Cherry blossoms, como esos paddling no sé cómo le llaman exactamente | Locally in Georgetown, there you can do kayaking, and you can also do it in Tidal Basin where the Cherry blossoms are, like that paddle board, I don't know what they call it exactly. |
| Moderator | [00:26:40] - [00:26:44] | Es como una tabla donde tu remas | It's like a board where you paddle. |
| Juan | [00:26:44] - [00:26:46] | Sí | Yes |
| Moderator | [00:26:46] - [00:26:48] | Okay, muy bien. ¿Erica? | Okay, all right, Erica? |
| Erica | [00:26:48] - [00:26:52] | No, no he tenido la oportunidad | No, I haven't had the opportunity |
| Moderator | [00:26:52] - [00:27:23] | Okay muy bien. Okay ahora vamos a hablar y voy a empezar con Erica, y despues voy con Juan, Cajuan y Bety. Creo que vamos a empezar ahora hablar de un tema abstracto sobre cómo nos hace sentir, cuáles son los sentimientos que se les ocurre a uno cuando están cerca del agua natural y voy a empezar con Erica, ¿Cómo uno se siente? | Okay very good, okay now we are going to talk and I'm going to start with Erica, and then I'm going to go with Juan, Cajuan and Bety. I think we are going to start now talking about an abstract topic, about how it makes us feel, what are the feelings that occur to one when we are near natural water, and I'm going to start with Erica, how does one feel? |
| Erica | [00:27:23] - [00:27:24] | En paz. | Peaceful. |
| Moderator | [00:27:24]-[00:27:26] | Mucha paz ¿relajado? | Very peaceful, relaxed? |
| Erica | [00:27:26] - [00:27:27] | El sonido | The sound |
| Moderator | [00:27:27] - [00:27:30] | el sonido relaja a uno, okay. | The sound relaxes you, okay |
| Erica | [00:27:30] - [00:27:55] | Es una manera de como meditar, ¿no? caminas te relajas ves, piensas todas las cosas en un ratito en unos | It's a way of meditating, right? You walk, you relax, you observe, you think about all the things in a little while, in a few |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-14 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | segundos, pero a la vez está relajada es lo que yo siento. | seconds, but at the same time you are relaxed, it's what I feel. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:27:55] - [00:28:06] | Claro, es válido, muchas gracias, Juan ¿qué sientes tu cuando estas al lado en el agua natural? | Of course, it is valid, thank you very much. Juan, what do you feel when you are next to it in the natural water? |
| Juan | [00:28:06] - [00:28:18] | Es relajante más que nada, pero después de eso nada más solamente me relaja es como recargar energías en otras palabras. | It's relaxing more than anything else, but after that it just relaxes me, it's like recharging my energy in other words. |
| Moderator | [00:28:18] - [00:28:46] | Claro, eso es lo otro. Es mucha calma, relaja, uno se libera del estrés, como que uno piensa cositas un minuto, pero se le va y viene la relajación, la calma, la meditación y Juan, me gustó mucho lo que acabas de decir porque, pero ¿por qué acabas de decir eso? | Of course, after all, it is very calming, it relaxes you, you free yourself from stress, like you think for a minute but then it goes away and relaxation comes, calmness, meditation, and Juan, I really liked what you just said, but why did you just say that? |
| Juan | [00:28:46] - [00:28:48] | ¿Cuál parte? | Which part? |
| Moderator | [00:28:48] - [00:28:51] | La segunda parte que dijiste | The second part you said |
| Juan | [00:28:51]-[00:28:53] | ¿Recargar energías? | Recharge your energy? |
| Moderator | [00:28:53]-[00:28:55] | Sí, sí. | Yes, yes. |
| Juan | [00:28:55] - [00:29:32] | Usualmente muchas veces como todos dicen, como tú preguntaste al comienzo, como va tu día, mucha gente comienza el día haciendo algo, su trabajo o lo que hace uno típicamente de día a día, entonces, cuando uno va afuera el propósito de estar afuera es de recreación, relajarse, hacer algo distinto y usualmente cuando uno va a un rio, una playa, es porque está haciendo una actividad con la familia o entre amigos o solo, pero que es relajante y no tiene que ver con su día a día. | Usually, as everybody says, as you asked at the beginning, how is your day going, many people start the day doing something, their work, or what one typically does from day to day. So, when you go outside, the purpose of being outside is for recreation, to relax, to do something different and usually when one goes to a river, a beach, it is because one is doing an activity with the family or among friends or alone but it is relaxing and it does not have to do with their day to day. |
| Moderator | [00:29:32] - [00:29:38] | Okay, muy bien y bien dicho. Cajuan. | Okay, very good and well said. Cajuan? |
| Cajuan | [00:29:38] - [00:29:39] | Sí | Yes |
| Moderator | [00:29:39] - [00:29:43] | ¿Cómo te sientes a lado de un cuerpo de agua natural? | How do you feel next to a natural body of water? |
| Cajuan | [00:29:43] - [00:29:32] | Se siente bien, como refrescante, te da vida es como te sientes el cuerpo una experiencia | It feels good, it feels refreshing, it feels lifegiving, it feels like your body is in an out of body experience. |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-15 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:29:32] - [00:29:37] | Fuera, de tu cuerpo, out of body. | Out, out of your body, out of body. |
| :---: | :---: | :---: | :---: |
| Cajuan | [00:29:37] - [00:30:05] | Es como tu mente, se va y piensa y se distrae | It's like your mind, it goes away, and you think, and you get distracted. |
| Moderator | [00:30:05] - [00:30:18] | Se distrae, okay muy bien. Bety ¿Cuáles son los sentimientos que te llega así cuando estás a lado de un cuerpo de agua? | You get distracted, okay very well. Bety What are the feelings that come to you like that when you are next to a body of water? |
| Bety | [00:30:18] - [00:30:55] | Primeramente, el agua naturalmente relaja, pero es algo como una diversión, una distracción, un salir de todos los pensamientos de casa, de trabajo y de todo ¿no? Es algo que a mi verdaderamente me relaja me hace sentir más libre de libre no, esa es una palabra muy... | First, the water naturally relaxes, but it is something like fun, a distraction, a way to get away from all the thoughts of home, work and everything, it's something that really relaxes me, it makes me feel free, that's a very... |
| Moderator | [00:30:55] - [00:31:00] | Libre, te hace sentir libertad | Free, it makes you feel free |
| Bety | [00:31:00] - [00:31:14] | Sí, es algo que me da gusto, especialmente en el mar que uno entra bajo las olas y sale como el ave fénix, nuevamente a la | Yes, it is something I like, especially in the sea when you enter under the waves and come out like a phoenix. |
| Moderator | [00:31:14] - [00:31:36] | Me gustó esa imagen de cuando uno sale de la ola como el ave fénix, muy bonito. Me hablaron de diferentes cuerpos de agua que están máso menos en el área donde vive ¿Se le hace fácil llegar a estos lugares o no? | I liked that image of when you come out of the wave like a phoenix, very nice. Okay, you told me about different bodies of water that are in the area where you live, is it easy for you to get to these places or not? |
| Bety | [00:31:38] - [00:31:47] | Principalmente nosotros, vivimos a 3 horas, de 3 a cuatro horas de Virginia Beach que es donde nos gusta ir. | Mainly we live 3 to four hours away from Virginia Beach which is where we like to go. |
| Moderator | [00:31:47] - [00:32:08] | Okay, o sea que es un trecho, pero vamos a decir por ejemplo, otro cuerpo de agua, no tiene que ser para bañarse para si no para visitar o picnic o lo que sea ¿Qué tan cerca está un cuerpo de agua donde visitan? No necesariamente para bañarse. | Okay, so it's a bit of a stretch, but let's say for example, another body of water, it doesn't have to be for bathing but for visiting or picnicking or whatever, how close is a body of water where you can visit? Not necessarily for bathing. |
| Cajuan | [00:32:12] - [00:32:20] | Bueno el mío, es como 30 minutos el de Harbour, puedo estar ahí en 30 minutos, tomo dos buses y ahí estoy ya. | Well, mine, it's like 30 minutes to Harbor, I can be there in 30 minutes 1 take two buses and I'm there. |
| Moderator | [00:32:20]-[00:32:28] | Dos autobuses y ya está ahí, okay muy bien ¿Y Juan? | Two buses and you're there, okay very well and Juan? |

Segment G: Spanish language group, English translation; July 10, 2022

| Juan | [00:32:28] - [00:33:18] | Bueno, técnicamente todos los que vivimos en esta área tenemos el Potomac y [inaudible] pero esos no los contaría, no como ríos que relajan, pero ríos que más bien te estresan porque no hay nada ahí, pero si sería algo de playas las que tengo acá en Maryland me quedarían como a 45 minutos a una hora. Cuando vivía en Arlington en Virginia, algunos lagos que eran más como por Springfield, que quedan como a 30 minutos y después en los trails, hay como no sé cómo se dice en español creo que es riachuelos, creeks. | Well, technically all of us who live in this area have the Potomac and [inaudible] but I wouldn't count those, not as relaxing rivers but rather rivers that stress you out because there's nothing there, but if it's something like beaches, the ones I have here in Maryland would be like 45 minutes to an hour away. When I lived in Arlington in Virginia, some lakes that were more like Springfield, that are about 30 minutes away, and then on the trails, there are like I don't know how to say in Spanish I think it's creeks. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:33:18] - [00:33:25] | Riachuelos sí, sí, que son cositas pequeñas Brook Creek. | Creeks yes, yes, that are little rivers like Brook Creek. |
| Juan | [00:33:25] - [00:33:31] | Entonces eso también, ese es otro lugar que está cerca. | So that too, that's another place that's nearby. |
| Sherley | [00:33:32] - [00:33:38] | Okay, muy bien y Erica, ¿Qué tan cerca están esos lugares de dónde vives? | Okay, all right and Erica, how close are those places to where you live? |
| Erica | [00:33:38] - [00:33:40] | Tengo uno aquí a la espalda de mi casa. | I have one right here behind my house. |
| Moderator | [00:33:40] - [00:33:50] | Okay, qué bueno ¿y es un parque ya desarrollado tipo parque para que uno pueda divertirse allá? | Okay, that's nice and is it a completed park so you can go have fun there? |
| Erica | [00:33:50] - [00:33:55] | Es como para caminata, correr, hacer ejercicios. | It's like for walking, jogging, exercising. |
| Moderator | [00:33:55] - [00:33:58] | ¿Hay paseos para hacer ejercicios y caminar? | Are there exercise and walking trails? |
| Erica | [00:33:58] - [00:34:05] | Es un Trail grande, largo, el más grande que tiene, me imagino lo van a hacer, no lo sé | It's a big, long trail, the biggest one they have, I imagine they're going to do it, I don't know. |
| Moderator | [00:34:05] - [00:34:53] | Okay, muy bien, muy bien. Ahora vamos, ¿ha habido un momento en su vida donde, se volvieron más activos? ¿Están menos activos o más activos en cuanto a visitar o pasar tiempo al aire libre en esos lugares? <br> Yo sé que la pandemia cambió algunos comportamientos, simplemente quiero saber si ha incrementado su tiempo pasado afuera, o sea al aire libre o ha disminuido, qué me | Okay, all right. Now, has there been a time in your life when you have become more active, are you less active or more active in terms of visiting or spending time outdoors in those places? <br> I know that the pandemic changed some behaviors, I just want to know if you have increased your time spent outside, so outdoors, or has it |

|  |  | dicen, puede empezar cualquier persona. | decreased, what do you say, anyone can start. |
| :---: | :---: | :---: | :---: |
| Speaker | [00:34:53] - [00:35:26] | Normalmente yo he jugado volley toda mi vida, y me gustaba salir y lo de la pandemia me encerró, no trabajaba, no salíamos, entonces eso paró mi ritmo de vida en el aspecto de hacer deporte fuera. Aquí en casa, pero igual no he retomado esto me da tristeza. | Normally, I have played volleyball all my life, and I liked to go out and the pandemic locked me up, I didn't work, we didn't go out, so that stopped my rhythm of life in the aspect of doing sports outside. Only at home, but I still haven't taken it up again, it makes me sad. |
| Moderator | [00:35:26] - [00:35:31] | Okay, sí. ¿Cajuan que me dices? | Okay, yes. Cajuan, what do you say? |
| Cajuan | [00:35:31] - [00:35:48] | Bueno yo, cuando me dijeron que podía salir afuera yo salí afuera, fui a la piscina al golf club, a hacer golfing, todo lo que no podía hacer lo hice. | Well, when they told me I could go outside I went outside, I went to the pool, to the golf club, to do golfing, everything I could not do, I did it. |
| Moderator | [00:35:48] - [00:35:56] | Ósea cuando ya tenías permiso para salir afuera ¿Cuándo creciste? | So, when you were allowed to go outside, when did you grew up? |
| Cajuan | [00:35:56] - [00:35:58] | No, después de la... | No, after the... |
| Moderator | [00:35:58] - [00:36:02] | Oh después del shutdown, o sea tú te fuiste y te aprovechaste de todo | Oh, after the shutdown, so you went out and took advantage of everything? |
| Cajuan | [00:36:02] - [00:36:06] | Sí, de todo. | Yes, of everything. |
| Moderator | [00:36:06] - [00:36:09] | Okay muy bien, okay Juan. | Okay all right, okay Juan |
| Cajuan | [00:36:09] - [00:36:11] | Antes de que lo cerraran otra vez | Before they shut it down again |
| Moderator | [00:36:11] - [00:36:20] | Okay muy bien dicho. Juan yo sé que juegas futbol, pero cha incrementado tu tiempo al aire libre o disminuido? | Okay very well said, Juan, I know you play soccer, but has your time outdoors increased or decreased? |
| Juan | [00:36:20]- [00:36:24] | Antes de la pandemia, después de la pandemia, en cuantos años o en que, ¿qué es el timeframe? | Before the pandemic, after the pandemic, in how many years or in what, what is the timeframe? |
| Moderator | [00:36:24] - [00:36:35] | Eso es el timeframe antes de la pandemia y hoy mismo, o ha llegado a su normalidad para ti. | That's the timeframe before the pandemic and just today, or has it reached its normal state for you. |
| Juan | [00:36:35] - [00:37:07] | Yo diría que a su normalidad porque antes de la pandemia era activo, no tan activo como cuando estaba en la universidad o en mis 20's pero, durante la pandemia estaba así nomás actividades adentro de la casa pero yo diría que desde abril del año pasado comencé a salir más, a hacer más cosas ya cuando las cosas estaban volviendo a la normalidad. | I would say normal because before the pandemic I was active, not as active as when I was in college or in my 20's but, during the pandemic I was just doing activities inside the house, but I would say that since April of last year I started to go out more, to do more things when things were getting back to normal. |

| Page 5G-18 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:37:07] - [00:37:12] | Okay muy bien, y Erica ¿qué me dices? | Okay, very well, and Erica, what do you say? |
| :---: | :---: | :---: | :---: |
| Erica | [00:37:12] - [00:37:15] | El mío ha disminuido. | Mine has decreased. |
| Moderator | [00:37:15] - [00:37:16] | ¿Por qué? | Why is that? |
| Erica | [00:37:16] - [00:37:22] | Será por miedo, de salir a contagiarme. | It could be because of fear, of going out and getting infected. |
| Moderator | [00:37:22] - [00:38:19] | Eso es definitivamente una preocupación, el de no contagiarse con el Covid, es algo que preocupa no solamente a ti, pero a muchísimas personas, yo me puedo incluir también en eso. Bueno pues vamos a la siguiente sección. Durante los próximos minutos, yo voy a presentar en la pantalla en unos segundos, algunas declaraciones, y lo que quiero es obtener su reacción, qué tan de acuerdo están con la declaración que esta puesta en la pantalla. Y estas declaraciones con actitudes sobre el medio ambiente, $y$ las respuestas son: totalmente de acuerdo, algo de acuerdo, neutral, algo en desacuerdo o totalmente en desacuerdo. | That is a concern, not to get infected with Covid, it is something that worries not only you, but a lot of people, I can include myself in that. Well, let's go to the next section. During the next few minutes, I am going to present on the screen in a few seconds, some statements, and what I want is to get your reaction, how much you agree with the statement that is on the screen. And these are statements with attitudes about the environment, and the answers are strongly agree, somewhat agree, neutral, somewhat disagree or strongly disagree. |
| Moderator | [00:38:19] - [00:38:57] | Y quiero que cada uno me diga que tan de acuerdo están, ¿okay? <br> Vamos a empezar ahora, voy a presentar la pantalla. ¿Pueden ver eso? Okay. Aquí está la declaración, "estar cerca o sobre el agua, me hace sentir más feliz". Totalmente de acuerdo, algo de acuerdo, neutral, algo en desacuerdo o totalmente en desacuerdo con la declaración, Erica dime. | And I want everyone to tell me how much you agree, okay. We're going to start now, I'm going to present the screen, okay can you see that? Okay. <br> Here's the statement, "being near or on the water, makes me feel happier." <br> Strongly agree, somewhat agree, neutral, somewhat disagree or strongly disagree with the statement. Erica, tell me. |
| Erica | [00:38:57] - [00:38:59] | Yo totalmente de acuerdo. | I totally agree. |
| Moderator | [00:38:59] - [00:39:00] | Okay, ¿Por qué? | Okay, why? |
| Erica | [00:39:00] - [00:39:37] | Como vuelvo a repetir me distrae el mar, el mar a pesar de que esté silencioso o no se mueva, trae una energía especial, a mí, no sé si para otra persona, creo que a Juan no le gusta el rio calmado le gusta que se mueva, a mí me gusta de todas formas, será | As I said before, the sea distracts me, the sea even if it is silent or doesn't move, it brings a special energy to me, I don't know if for someone else, I think Juan doesn't like the calm river, he likes it to move, I like it anyway, it's because |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-19 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | porque uno se pone a pensar, da más calma, el olor | it makes you think, it gives more calm, the smell. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:39:37] - [00:39:38] | Ese salitre, la sal. | The salt. |
| Erica | [00:39:38] - [00:39:55] | No sé, es todo, es recordar de cuando era pequeña, e iba a la playa, caminaba hasta la playa, porque nosotros vivíamos cerca de la playa anteriormente, hace muchos años. | I don't know it's everything, it's remembering from when I was little, and going to the beach, walking to the beach, because we lived near the beach before, many years ago. |
| Moderator | [00:39:55] - [00:40:05] | Alguien en otro grupo dijo que era terapéutico. Se siente como terapéutico que uno entra de una forma y sale de otra. | Someone in another group said it was therapeutic. It feels therapeutic that you go in one way and come out different. |
| Erica | [00:40:05] - [00:40:22] | Así es, eso es verdad, el atardecer, el amanecer estando en la playa, es lo mejor, es lo mejor que puede tener la naturaleza. | That's right, that's true, the sunset, the sunrise being on the beach, it's the best, it's the best that nature can have. |
| Moderator | [00:40:22] - [00:40:28] | Ah que bonito, okay. ¿Quién quiere ir siguiente? Okay, Cajuan | Ah that's nice. Okay who wants to go next? Okay, Cajuan. |
| Cajuan | [00:40:28] - [00:40:28] | Bueno, como está diciendo Erica que te hace recordar tu juventud como te ibas a la playa, como ibas con la familia. | Well, as Erica is saying, it makes you remember your youth, how you used to go to the beach, how you used to go with the family. |
| Erica | [00:40:28] - [00:40:32] | Le da nostalgia a uno | It makes you nostalgic. |
| Cajuan | [00:40:32] - [00:40:51] | Sí, nostalgia y también estoy totalmente de acuerdo. | Yes, nostalgic and I also totally agree. |
| Moderator | [00:40:51] - [00:40:56] | Okay, te acuerdas de lo que Erica dijo, la calma... | Okay, do you remember what Erica said about the calm... |
| Cajuan | [00:40:56] - [00:40:57] | Sí. | Yes. |
| Moderator | [00:40:57] - [00:41:05] | Okay, muy bien. Bety y luego Juan. ¿Bety, que tan de acuerdo esta con esta declaración? | Okay, very well. Bety and then Juan, Bety, how much do you agree with this statement? |
| Bety | [00:41:10] - [00:41:12] | Algo de acuerdo | Somewhat agree. |
| Moderator | [00:41:12] - [00:41:13] | Okay, ¿Por qué? | Okay, why? |
| Bety | [00:41:13] - [00:42:13] | Porque feliz, ya soy feliz por cualquier motivo, pero la verdad que, yo nací a lado de la playa nací en la playa como conocerán los peruanos, nací en la punta del Callao que justo es la punta, a media cuadra de la playa era mi casa, y yo crecí, yo nací ahí y pues, mi vida era la playa, el mar y todo el día íbamos, yo era la menor y con mis hermanos mayores íbamos todo el día. Mi recuerdo, desde pequeñita es ser feliz con mis hermanos, entonces | Because I'm happy, I'm happy for any reason anyways, but the truth is that I was born next to the beach, I was born on the beach as you Peruvians know, I was born on the tip of Callao which is just the tip, half a block from the beach was the house where I grew up, I was born there and well, my life was the beach, the sea and all day we went there. I was the youngest and with my older brothers we |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | ahora que ya lo hago con mi esposo mis hijos, o mi hija igual me siento feliz. | went all day. My memories, since I was a little girl, are about being happy with my siblings, so now that I do it with my husband, my sons, or my daughter, I feel happy. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:42:13] - [00:42:15] | Feliz, muy bien, ¿¢ juan? | Happy, very good and Juan |
| Juan | [00:42:15] - [00:43:09] | Ah okay, algo de acuerdo para mí, creo que comparto el mismo sentimiento que Bety, usualmente uno hace su propia felicidad, uno tiene que tratar de ser feliz, pero digo algo de acuerdo porque cuando uno va al agua, en el caso mío como dije anteriormente, recarga mis energías. No sé, si estoy cansado o estresado por alguna cosa, si estoy cerca de un rio, en la playa o en un lago como que me regenera esa energía. Yo sé que para diferentes personas es distinto el cuerpo de agua puede actuar de diferentes maneras, en el caso mío es que me recarga esa energía, más que nada. | Ah okay, somewhat agree, for me, I think I share the same feeling as Bety. Usually you make your own happiness, you have to try to be happy, but I somewhat agree because when you go to the water, in my case as I said before, it recharges my energies. I don't know, if I am tired or stressed about something, if I am near a river, on the beach or in a lake, it kind of regenerates my energy. I know that for different people it is different, the body of water can act in different ways, in my case it recharges my energy, more than anything else. |
| Moderator | [00:43:09] - [00:43:53] | Okay muy bien. Okay vamos a la próxima declaración, que es, cuando estoy en los parques o en senderos cerca del agua, veo a otras personas como yo, o sea latinos, en este caso de este grupo, ¿es cierto? $O$ ven personas de otra raza más que los latinos, ¿se encuentran con un latino, a veces en estos lugares, parques o senderos cerca del agua? Juan empieza tú, y después vamos con los demás. | Okay very well, okay let's go to the next statement, that is, when I'm in the parks or on trails near the water, I see other people like me, that is Latinos, in this case from this group, is it true? Or do you see people of another race other than Latinos, do you encounter Latinos sometimes in these places, parks or trails near the water? Juan you start, and then we go with the others. |
| Speaker | [00:43:53] - [00:43:56] | Para ser honesto depende del parque o del área. | To be honest it depends on the park or the area, |
| Moderator | [00:43:56] - [00:44:05] | Okay, dime cuáles son las áreas donde tú ves, o no ves a la gente latina. | Okay, tell me what are the areas where you do or don't see Latino people. |
| Juan | [00:44:05] - [00:44:28] | Yo actualmente donde vivo en Silverspring, hay más gente latina o afroamericana, pero un ejemplo, cuando yo vivía en Arlington Virginia, era puros Americanos blancos, casi, que estaban en los | where I live in Silverspring, there are more Latino or African American people, but for example, when I lived in Arlington Virginia, it was all white Americans, almost, that were in the |

| :--- | ---: |
| Page 5G-21 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | parques y cuando voy a Rock Creek, es una buena combinación de todo | parks and when I go to Rock Creek, it's a good mix of everything. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:44:28] - [00:44:30] | ¿Hay más diversidad? | Is there more diversity? |
| Juan | [00:44:30] - [00:44:36] | Una diversidad más grande hay, exacto. | There is a greater diversity, that's right |
| Moderator | [00:44:36] - [00:44:45] | Okay, ¿qué me dice Cajuan? Cuando estoy en senderos o en parques cerca del agua, veo a otras personas como yo. | Okay, what does Cajuan say? When I'm on trails or in parks near the water, I see other people like me. |
| Cajuan | [00:44:45] - [00:45:01] | Totalmente de acuerdo, porque en los parques que yo voy siempre hay diferentes razas, blancos, morenos | I totally agree, because in the parks that I go there are always different races, whites, browns, Latinos.... |
| Moderator | [00:45:01] - [00:45:03] | Latinos... | Latinos... |
| Cajuan | [00:45:03] - [00:45:06] | Latinos, de todo, de todo | Latinos, from everywhere. |
| Moderator | [00:45:06] - [00:45:29] | O sea que no, porque lo que queremos saber es si hay lugares que lo hacen sentir incómodo o han tenido algún acto de racismo o de discriminación, cuando ha ido a parques o diferentes cuerpos de agua, eso es lo que estamos tratando de descubrir... | So no, because what we want to know is if there are places that make you feel uncomfortable or if you have experienced some act of racism or discrimination when you have gone to parks or different bodies of water, that is what we are trying to discover... |
| Cajuan | [00:45:29] - [00:45:51] | Bueno, hay unos parques que síte hacen sentir como que no estás en el lugar correcto. Estás viendo como, ay no hay nadie más como yo. No he enfrentado racismo, así como directo pero indirecto sí, todo el tiempo | Well, there are some parks that do make you feel like you're not in the right place. <br> You're seeing like oh, there's no one else like me. I haven't faced racism, like directly but indirect racism all the time. |
| Moderator | [00:45:51] - [00:45:51] | O que te miran mal, | Or that they look at you the wrong way, |
| Cajuan | [00:45:51] - [00:45:53] | Claro, claro | Right, right. |
| Moderator | [00:45:53] - [00:46:07] | Okay, okay, gracias. Y Bety, ¿Qué me dices? Cuando estoy en los parques o en los senderos cerca del agua veo a otras personas como yo | Okay, okay, thank you. And Bety, what do you think? When I'm in the parks or on the trails near the water I see other people like me. |
| Bety | [00:46:07] - [00:46:30] | Cuando salgo por acá, cerca de mi casa porque me gusta caminar mucho, veo más personas asiáticas en el recorrido, y normal, no sé mucha gente... | When I go out around here, near my house because I like to walk a lot, I see more Asian people on the trail, and normally, I don't know a lot of people... |
| Moderator | [00:46:30] - [00:46:35] | Neutral, ¿estas neutral? O | Neutral, are you neutral? |
| Bety | [00:46:35] - [00:46:51] | Sí, estoy neutral porque veo, no de todo, pero más caminan creo las personas asiáticas y los americanos, veo | Yes, I am neutral because I see, I don't know, from everywhere but I think more Asian people and Americans walk, I see few |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-22 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | poco hispano que camina. <br> Pero cuando voy a la playa sí. | Hispanic people walking. But when I go to the beach, yes. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:46:51] - [00:46:53] | ¿Hay gente latina? | Are there Latino people? |
| Bety | [00:46:53] - [00:46:55] | Sí, mucho latino, mucho de todo. | Yes, a lot of Latinos, a lot of everything. |
| Moderator | [00:46:55] - [00:46:59] | Okay, muchas gracias. Okay Erica. | Okay, thank you very much. Okay Erica. |
| Erica | [00:46:59] - [00:47:01] | Yo veo mucha diversidad | I see a lot of diversity |
| Moderator | [00:47:01] - [00:47:07] | De todo un poco, okay | A little bit of everything, okay |
| Erica | [00:47:07] - [00:47:16] | Gente del medio oriente, asiáticos, no he visto ningún lugar... | People from the Middle East, Asians, I haven't seen anywhere... |
| Moderator | [00:47:16] - [00:47:17] | ¿latinos? | Latinos? |
| Erica | [00:47:17] - [00:47:25] | También, latinos cuando he ido a Fairfax | Also, Latinos when I've been to Fairfax. |
| Moderator | [00:47:25] - [00:47:58] | Okay gracias. Aquí está la última de esta sección, estar cerca o sobre el agua. Ah no, pero si yo estoy yendo para atrás. Okay, esta es la siguiente: hay un acceso para pasear en bote, pescar, nadar cerca de donde yo vivo. ¿Es cierto? ¿Quién está de acuerdo? Levante la mano. Están en desacuerdo, todos. Si, dime Juan. | Okay thanks, here is the last of this section, being near or on the water.... Ah no, but I'm going backwards. Okay, here's the next one: there's an access for boating, fishing, swimming near where I live. Is that right? Who agrees? Raise your hand. They disagree, everybody. Yes, tell me Juan. |
| Juan | [00:47:58] - [00:48:19] | Bueno, no creo que haya algo cerca para hacer eso, técnicamente lo más cerca para estar en un bote, primero sería National Harbor, [inaudible], Alexandria, Georgetown, son lugares específicos | Well, I don't think there's anything nearby to do that, technically the closest thing to be on a boat, first would be National Harbor, [inaudible], Alexandria, Georgetown, those are specific places. |
| Moderator | [00:48:19] - [00:48:29] | Donde se puede acceder, vamos a decir si tiene una Yolita, un kayak no puedes acceder a nada de eso, ¿a menos que sea allá? | Where you can access let's say if you have a kayak, you can't access that, unless it's there? |
| Juan | [00:48:29] - [00:49:04] | Claro, pescar también tiene que ser un rio grande como, por ejemplo, yo he visto gente que no sé porque lo hace porque yo no pescaría ahí pero en el Batson River he visto ahí gente pescando, y nadar, bueno, aunque dije que voy a la playa está a 45 minutos o 1 hora no está tan cerca, está en el área pero no está tan cerca como quisiera. Por ejemplo, como dijeron mis compatriotas vamos a decirlo, en Lima. | Of course, fishing also has to be in a big river like for example, I have seen people that I don't know why they do it, because I wouldn't fish there but in the Batson River I have seen people fishing there, and swimming, well, although I said I go to the beach, it is 45 minutes or 1 hour away it is not that close, it is in the area but it is not as close as I would like it to be. For example, |

| :--- | ---: |
| Page 5G-23 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  |  | as my compatriots said let's say it, in Lima. |
| :---: | :---: | :---: | :---: |
| Moderator | [00:49:04] - [00:49:08] | Si, la ciudad entera es la playa sí. | Yes, the whole city is the beach, yes. |
| Juan | [00:49:08] - [00:49:16] | Si, entonces acá no es tan fácil, pero de que hay acceso lo hay, solamente que no es cerca. | Yes, so here it is not so easy, but there is access, it is just not close. |
| Moderator | [00:49:16] - [00:49:22] | Okay, entendido. Que me dicen, ¿en desacuerdo Bety? | Okay, got it. What do you say, do you disagree Bety? |
| Cajuan | [00:49:22] - [00:49:25] | Bueno yo, estoy deacuerdo | Well, I agree. |
| Moderator | [00:49:25] - [00:49:27] | Oh, Cajuan sí. | Oh, Cajuan yes. |
| Moderator | [00:49:27] - [00:49:28] | Dime ¿Por qué? | Tell me why? |
| Cajuan | [00:49:28] - [00:49:29] | Ah, perdón. | Ah, sorry. |
| Moderator | [00:49:29] - [00:49:36] | No, no esta bien, primero Cajuan, despues Bety y luego Erica, dime Cajuan. | No, it's not right, first Cajuan, then Bety and then Erica, tell me Cajuan. |
| Cajuan | [00:49:38] - [00:49:49] | Okay, si porque [inaudible] esta como a 45 o 1 hora, no es $\tan$ accesible, no es conveniente | Okay, yes, because [inaudible] it's about 45 or 1 hour away, it's not that accessible, it's not convenient. |
| Moderator | [00:49:49] - [00:49:54] | No es conveniente, muy bien y Bety | It is not convenient, very well and Bety |
| Bety | [00:49:54] - [00:40:58] | Aquí no hay para nada cerca pues, todo es lejos. | Here there is nothing close at all, everything is far away. |
| Moderator | [00:40:58] - [00:50:02] | Okay, Erica. | Okay, Erica. |
| Erica | [00:50:02] - [00:50:05] | Igualmente, todo es distante. | Likewise, everything is far away. |
| Moderator | [00:50:05] - [00:50:13] | Aunque tienes, dice un cuerpo de agua natural detrás de tu casa, pero ¿nada de estos servicios hay ahí? | Although you have, say a natural body of water behind your house but none of these services are in there. |
| Erica | [00:50:13] - [00:50:18] | No, ninguno. Perritos nada más, pero | No, none. Doggies only, but |
| Moderator | [00:50:19] - [00:50:24] | Los perritos están gozando más que los humanos. | The dogs are enjoying it more than the humans. |
| Erica | [00:50:24] - [00:50:26] | Así es. | Yes, they are. |
| Moderator | [00:50:26] - [00:51:35] | Okay, vamos a la próxima sección, okay ahora vamos a ver, características de un sitio de acceso público al agua, ósea, quiero saber qué características, le harían que características le harían visitar con mas frecuencia, obviamente algo que sea cercano a su casa, que otras amenidades, que otras cosas lo haría ir mas a menudo. En el otro grupo me dijeron bueno, que tengan baños, accesibles, limpios. Que tengan, ósea es un ejemplo, que otros ejemplos me pueden dar, una característica que lo haría ir frecuentar un | Okay, let's go to the next section, okay now let's see, the characteristics of a public water access site, I mean, I want to know what characteristics, what characteristics would make you visit more often, obviously something that is close to your home, what other amenities, what other things would make you go more often. In the other group, they told me that it should have restrooms, accessible, and clean. That they have, I mean that's an example, what other examples can you give me, a feature that |

|  |  | lugar mas cerca de su casa. ¿Qué tendría? | would make you go to a place closer to your house. What would it have? |
| :---: | :---: | :---: | :---: |
| Erica | [00:51:35] - [00:51:40] | No estar mas cerca de las piscinas | Not near a pool, |
| Moderator | [00:51:40] - [00:51:44] | No de piscinas, si no rios, lagos o playas. | not pools but like rivers, lakes, or beaches. |
| Erica | [00:51:44] - [00:51:46] | Los parqueos | Parking lots. |
| Moderator | [00:51:46] - [00:51:48] | ¿Que tenga buen estacionamiento? | Good parking? |
| Erica | [00:51:48] - [00:51:51] | Mas parqueos, mas... | More parking, more... |
| Moderator | [00:51:52] - [00:52:04] | Mas estacionamiento, mas parqueos, que más me dicen, | More parking, what else do you say? |
| Juan | [00:52:04] - [00:52:06] | Acceso como dijeron, también comida | Access as they said, also food. |
| Moderator | [00:52:06] - [00:52:08] | Si, algo de comida. | Yes, some food. |
|  | [00:52:08] - [00:52:33] | Claro, lugar donde te puedan, no se en el caso de esta área por las leyes, pero site dejaran, por ejemplo, también ahí vender, si uno quiere una cerveza, también sería algo fácil | Of course, a place where you can, I don't know in the case of this area because of the laws, but if they would let you, for example, they could sell, if you want a beer, it would also be easy to sell. |
| Moderator | [00:52:33] - [00:52:40] | Como restaurante, como tipo restaurante. | Like a restaurant, like a restaurant type. |
| Juan | [00:52:40] - [00:52:49] | Si como que tengan características como buenos baños, un amplio parqueo estacionamiento. | If they have features such as good restrooms, and a large parking lot. |
| Moderator | [00:52:49] - [00:53:00] | Como dijo Erica, okay. Bety, ¿Qué características le viene a la mente? | Like Erica said, okay. Bety, what features come to mind? |
| Bety | [00:53:00] - [00:53:03] | La limpieza del lugar a... | The cleanliness of the place a... |
| Moderator | [00:53:03] - [00:53:14] | Ah muy bien dicho, la limpieza. Que no haya contaminación, o vamos a decir basura en el piso, | Ah very well said, the cleanliness. No contamination, or let's say garbage on the floor, |
| Bety | [00:53:14] - [00:53:30] | De todo no, porque en realidad, por ejemplo, a mí me gusta mucho el parque Marshall, siempre está impecable, limpiecito y la gente también parece que | Not everything, because in fact, for example, I really like Marshall Park, it's always spotless, clean and the people also seem to take care of it... |
| Moderator | [00:53:30] - [00:53:32] | Lo cuida... | They take care of it... |
| Bety | [00:53:32] - [00:53:50] | Lo cuida y lo deja todo limpio y las personas que están pasando normalmente recogen las basuras, y me gusta porque es un sitio muy limpio, los baños impecables. La vez pasada fui a un parque y estaba muy sucio. Son cosas que me gusta a mí, la limpieza. | They take care of it and leave everything clean and the people who are passing by usually pick up the garbage, and I like it because it is a very clean place, the restrooms are spotless. Last time I went to a park, and it was very dirty. These are things that I like, the cleanliness. |

| Page 5G-25 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:53:50] - [00:53:54] | Si la limpieza. Cajuan. | Yes, the cleanliness. Cajuan. |
| :---: | :---: | :---: | :---: |
| Cajuan | [00:53:54] - [00:54:06] | Para mi seria más actividades, que hacer en el agua, lugares para hacer en el bote, | For me it would be more activities, what to do on the water, places to do on the boat, |
| Cajuan | [00:54:06] - [00:54:12] | Donde uno pueda alquilar un kayak, un botecito. De esos botecitos como tipo bicicleta, | Where you can rent a kayak, a small boat. One of those little bicycle type boats, |
| Moderator | [00:54:12] - [00:54:14] | Paddleboard, | Paddleboard, |
| Cajuan | [00:54:14] - [00:54:22] | Si claro, paddleboard, si eso de la bicicleta y mas actividades con la familia. | Yes, of course, paddleboard, yes, the bicycle and more activities with the family. |
| Moderator | [00:54:22] - [00:54:57] | Muy bien, yo les voy a enseñar algunas imágenes del sitio ideal donde usted mismo se ve visitando, osea este es el primer set de imágenes, y quiero que escojan el sitio donde usted se identifica más, visitando ¿okay? Ósea, hay $A, B, C, D$ lo puede ver todo el mundo Cajuan, ¿puede ver las imágenes? | Okay, I am going to show you some images of the ideal place where you see yourself visiting, I mean this is the first set of images, and I want you to choose the place where you identify yourself the most, visiting, okay? I mean, there is $\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}$, everybody can see it Cajuan, can you see the images? |
| Cajuan | [00:54:57] - [00:54:58] | Si. | Yes, I can. |
| Moderator | [00:54:58] - [00:55:16] | Okay, Erica ¿cuál es, o cuales son las imágenes la que te gusta mas o la que te gusta más visitar, que te gustaría visitar? | Okay, Erica, which is, or which are the images that you like the most or that you like to visit the most, that you would like to visit? |
| Erica | [00:55:16] - [00:55:19] | Me vi en el A y en el C | I saw myself in A and C |
| Moderator | [00:55:19] - [00:55:22] | La A y C ¿Por qué? | The A and C Why? |
| Erica | [00:55:22] - [00:55:26] | Porque me gusta recrear mi visión. | Because I like to recreate my vision. |
| Moderator | [00:55:26] - [00:55:38] | Ósea las vistas, panorama, pero, me parece que esta solitaria, esa vista solitaria, no mucha gente. | I mean the views, panorama, but it seems to me that it's lonely, that lonely view, not many people. |
| Erica | [00:55:38] - [00:55:43] | Si , no me gusta el tumulto. | Yes, I don't like the crowd. |
| Moderator | [00:55:44]-[00:55:51] | El tumulto no te gusta, okay muy bien, ¿Qué me dice Bety? | You don't like the crowd, okay very well, what do you say Bety? |
| Bety | [00:55:51] - [00:56:03] | Me gusta la D, porque me gusta también participar mucho pero ahorita no, por el Covid. | I like the $D$, because I also like to participate a lot but not right now, because of the Covid. |
| Moderator | [00:56:03] - [00:56:18] | Okay, pero si el lugar, como está ahí que no hay mucha gente que esta que no hay mucho tumulto como dijo Erica, ¿le gustaría visitar la B? | Okay, but if the place, since there are not many people there, as Erica said, would you like to visit the B? |
| Bety | [00:56:18] - [00:56:25] | Si, me gustaría | Yes, I would like to |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-26 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:56:25] - [00:56:27] | ¿es el que más le gusta? | Is that the one you like the most? |
| :---: | :---: | :---: | :---: |
| Bety | [00:56:27] - [00:56:47] | Me gusta, si me gustaría. También me gustaría la C poque me gusta estar [inaudible] | I like it, yes I would. I would also like to visit C because I like to be [inaudible]. |
| Moderator | [00:56:47] - [00:56:59] | Donde dice como dijo Juan recargar la energía, o algo parecido, okay Juan ¿qué me dice? ¿Cuál te gusta más? | Whereas Juan said to recharge the energy or something like that, okay Juan, what does it say? Which one do you like better? |
| Juan | [00:56:59] - [00:57:05] | Tu pensarías que diría la C pero en si me gusta más la By la D | You would think I would say C, but I actually like B and $D$ better. |
| Moderator | [00:57:05] - [00:57:06] | ¿Por qué? | Why? |
| Juan | [00:57:07] - [00:57:40] | Porque la $B$ tiene un lago que tal vez sea un poquito mas profundo y tiene diferentes actividades como Rowing, y la D porque me gusta cuando estoy en el agua usualmente cuando entro al agua siento que me recargo, pero si no voy a entrar al agua y voy a hacer una actividad me gusta estar con bastante gente o haciendo algo con amistades o familia, y entonces la D me llama más la atención en ese caso, | Because B has a lake that is maybe a little bit deeper and has different activities like Rowing, and D because I like it when I am in the water usually when I go in the water I feel like I am recharging, but if I am not going to go in the water and I am going to do an activity I like to be with a lot of people or doing something with friends or family, and then D calls my attention more in that case, |
| Moderator | [00:57:40] - [00:57:47] | Sí porque, dice que es un grupo que va a ir a kayak. Okay, Cajuan, | Yes, because it says it's a group that's going kayaking. Okay, Cajuan, |
| Cajuan | [00:57:47] - [00:57:51] | Bueno claro que la D. | Well of course the D. |
| Moderator | [00:57:51] - [00:58:26] | Te gusta la bulla, te gusta la bulla, okay vamos a ver otro grupo de imágenes, aquí hay esta es la E, F, G, H, dime Cajuan empezamos contigo y vamos al revés, dime ¿Cuál de estas te gustaría visitar o donde te ves tu? | You like the noise, you like the noise, okay we are going to see another group of images, here is $\mathrm{E}, \mathrm{F}, \mathrm{G}$, H, tell me Cajuan we start with you, and we go backwards, tell me which one of these would you like to visit or where do you see yourself? |
| Cajuan | [00:58:26] - [00:58:30] | Creo que, en la E porque parece que es como un grupo, y están haciendo algo con... | I think, in the E because it looks like it's like a group, and they are doing something with... |
| Moderator | [00:58:30] - [00:58:31] | Con un bote | With a boat |
| Cajuan | [00:58:31] - [00:58:35] | Si con un bote, | Yes, with a boat, |
| Moderator | [00:58:35] - [00:58:38] | Una lancha es como una lancha, una lancha de motor. | A boat is like a motorboat, a motorboat. |
| Cajuan | [00:58:38] - [00:58:41] | Okay eso es lo que estaba diciendo, eso es lo que me gustaría. | Okay that's what I was saying, that's what I would like. |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-27 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [00:58:41] - [00:58:52] | Okay la E por la actividad, okay, Juan. | Okay the E for activity, okay, Juan. |
| :---: | :---: | :---: | :---: |
| Juan | [00:58:52] - [00:58:55] | Si tuviera que escoger, la H . | If I had to choose the H. |
| Moderator | [00:58:55] - [00:58:56] | Okay, ¿Por qué? | Okay, why? |
| Juan | [00:58:56] - [00:59:01] | Otra actividad con mucho grupo de personas. | Another activity with a lot of people. |
| Moderator | [00:59:01] - [00:59:03] | Muy bien, Bety. | All right, Bety. |
| Bety | [00:59:03] - [00:59:28] | Me encanta la H porque es un recorrido que uno hace y conoce sitios, me gusta porque cada vez que viene mi familia salimos a recorrer en bote, recorrer, bajar en un sitio, subir en el otro y me gusta eso. | I love the H because it is a tour that you do and you know places, I like it because every time my family comes, we go out on a boat tour, go around, go down in one place, go up in the other and I like that. |
| Moderator | [00:59:28] - [00:59:30] | Muy bien y Erica. | Very good and Erica. |
| Erica | [00:59:30] - [00:59:38] | Diría la E , que es algo parecido también, para estar en un bote, | I would say the $E$, which is something similar too, to be on a boat, |
| Moderator | [00:59:38] - [00:59:46] | Que uno puede llevar el propio, o alquilarlo y ser su propio capitán | That one can take one's own or rent one and be one's own captain. |
| Erica | [00:59:46] - [00:59:47] | Así es. | That's right. |
| Moderator | [00:59:48] - [01:01:46] | Okay muy bien. Aquí ahora vamos a ver seis diferentes como, algo que describe la característica como de un lugar de acceso público o sobre al agua o cerca del agua y yo quiero que me den su, la primera o la segunda o quizá tres, límite de 3 que mas les guste y por qué. Okay, tenemos la A, un sitio totalmente libre de gente, quizá con algunas personas ocupadas haciendo lo suyo, acceso a líneas de transite o carriles para bicicleta, ósea no quieren viajar o no pueden viajar por carro o autobús, que pueda llegar por tren, por autobús [inaudible]. Botes no, le dicen los containers, los barriles esos donde puede echar la basura, contenedores de reciclaje. Y para dar ayuda, para orientar o también como guardaparques, los que van chequeando, monitoreando el área, por si acaso sucede algo, que este seguro. | Okay very good. Here now we're going to look at six different like, something that describes the characteristic like of a place of public access or on the water or near the water and I want you to give me your, the first one or the second one or maybe three, limit of 3 that you like the most and why. Okay, we have A, a place totally free of people, maybe with some people busy doing their thing, access to transit lines or bike lanes, so they don't want to travel, or they can't travel by car or bus, they can get there by train, by bus [inaudible]. Not cans, they call them containers, those barrels where you can throw the garbage, recycling containers. And to give help, to orient or also as park rangers, those who check, monitor the area, in case something happens, to make sure it is safe. |
| Moderator | [01:01:46] - [01:02:32] | También, la seguridad y comodidad en el agua como | Also, safety and comfort in the water as areas |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-28 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | áreas disponibles para personas que son discapacitadas, o que necesitan ayuda adicional como una persona ya anciana, o que este en silla de ruedas o que no o su [inaudible]. $Y$ también para dar entrenamiento sobre cómo usar los salvavidas, los chalecos salvavidas. O también disponibilidad para alquilar kayaks, canoas, cañas de pescar, etcétera. ¿Cuáles de estas le gustan más? Cajuan. | available for people who are disabled, or who need extra help like an elderly person, or who is in a wheelchair or who is not or their [inaudible]. And also to give training on how to use the life jackets, the life jackets. Or also availability to rent kayaks, canoes, fishing rods, et cetera. Which of these do you like the most? Cajuan. |
| :---: | :---: | :---: | :---: |
| Cajuan | [01:02:32] - [01:02:42] | Bueno, yo creo que la ultima la $F$. | Well, I think the last one is the $F$. |
| Moderator | [01:02:42] - [01:02:53] | La F o hay otra quizá otra cosa que le animaría o le desanimaría a visitar un lugar, Erica. | The F or is there maybe something else that would encourage or discourage you from visiting a place, Erica. |
| Erica | [01:02:53] - [01:03:00] | Creo que seria la A que este un poco libre de gente | I think it would be the A that's a little bit uncrowded. |
| Moderator | [01:03:00] - [01:03:03] | Desocupada de gente, sí. | Unoccupied with people, yes. |
| Erica | [01:03:03] - [01:03:17] | La B es también genial porque estacionamiento libre, ahora hoy en día como todo el mundo desea salir va a lugares más libres. | B is also great because free parking, nowadays as everybody they go to more free places. |
| Moderator | [01:03:17] - [01:03:24] | [inaudible] | [inaudible] |
| Erica | [01:03:24] - [01:03:30] | Y la F que también para distraerse uno | And the $F$ is also great to get distracted |
| Moderator | [01:03:30] - [01:03:42] | Okay, Bety, ¿Qué me dices de estas características listadas? ¿Cuál le gusta más o cual le desanimaría en caso de? | Okay, Bety, what do you say about these characteristics listed, which one do you like the most or which one would discourage you in case of? |
| Erica | [01:03:42] - [01:03:47] | Me gustaría pues ya estando ahí... | I would like to be there... |
| Moderator | [01:03:47] - [01:03:51] | Me dice la letra por favor | Please tell me the letter |
| Erica | [01:03:51] - [01:03:56] | Me gustaría ya estando en el lugar, la presencia de botes de basura | I would like already being in the place, the presence of garbage cans. |
| Moderator | [01:03:56] - [01:03:58] | Los contenedores de basura, la limpieza. | The trash cans, the cleanliness. |
| Erica | [01:03:58] - [01:04:00] | La letra C. | The letter C. |
| Moderator | [01:04:00] - [01:04:04] | La letra C, okay, chay otra? | The letter C, okay, is there another one? |
| Erica | [01:04:04] - [01:04:09] | Y seguridad y comodidad en el agua | And safety and comfort in the water |
| Moderator | [01:04:09] - [01:04:10] | La E. | The E. |
| Erica | [01:04:10] - [01:04:21] | Porque puede estar bravo el mar y que haya salvavidas o | Because the sea can be rough and there are |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-29 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | las personas que te ayuden en algún caso. | lifeguards or people to help you in some case. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:04:21] - [01:04:26] | Okay, so la letra C y la letra E, muy bien. Okay, Juan. | Okay, so the letter C and the letter E, very good. Okay, Juan. |
| Juan | [01:04:26] - [01:04:28] | Todas. | All of them. |
| 'Moderator | [01:04:28] - [01:04:38] | Todo el abecedario, okay muy bien ¿hay algo que te desanimaría? | The whole alphabet, okay very good, is there anything that would discourage you? |
| Juan | [01:04:38] - [01:04:48] | No, no creo. Si tengo que escoger que me animaría más es entre la B, EyF | No, I don't think so. If I had to choose the one that would encourage me the most, it would be B, E and F. |
| Moderator | [01:04:48] - [01:04:50] | Okay, la letra B, la letra E y la letra F. | Okay, the letter B, the letter E and the letter F . |
| Juan | [01:04:50] - [01:04:51] | Sí. | Yes. |
| Moderator | [01:04:51] - [01:05:45] | Eso está en tu lista arriba, okay muy bien, estamos de muy buen tiempo. Vamos a seguir, ahora tenemos dos declaraciones mas para ver, esta actitud tiene que ver con uno mismo, y esta declaración dice: quiero hacer mas para que los arroyos, ríos y lagos locales sean más saludables ¿Qué tan de acuerdo están con esta declaración?, Cajuan, ¿estas totalmente de acuerdo, algo de acuerdo, neutral, algo en desacuerdo o totalmente en desacuerdo?, Cajuan... okay vamos con Erica | That's on your list at the top, okay very good, we're in very good weather. Let's move on, now we have two more statements to look at, this attitude statement has to do with yourself, and this statement says: I want to do more to make local streams, rivers and lakes healthier. How much do you agree with this statement, Cajuan, do you strongly agree, somewhat agree, neutral, somewhat disagree or strongly disagree, Cajuan... okay let's go to Erica. |
| Erica | [01:05:45] - [01:05:39] | Estoy totalmente de acuerdo | I totally agree |
| Moderator | [01:05:39] - [01:06:00] | Okay, ¿tu te ves como parte de la solución? | Okay, do you see yourself as part of the solution? |
| Erica | [01:06:00] - [01:06:18] | Para ayudar al ambiente, a que este mas limpio o así, no haya contagios o que se yo, puede ayudar a la salud de mucha gente, okay gracias, Erica ¿y Cajuan? ¿Qué tan de acuerdo esta con esta declaración? | To help the environment, to make it cleaner or so, there are no contagions or what do I know, it can help the health of many people, okay thank you, Erica, and Cajuan, how much do you agree with this statement? |
| Cajuan | [01:06:08] - [01:06:30] | [inaudible] como recoger basura de los mares todo eso, | [inaudible] like picking up garbage from the seas, all that, |
| Moderator | [01:06:30] - [01:06:32] | Okay, ¿qué me dice Juan? | Okay, what do you say Juan? |
| Juan | [01:06:32] - [01:06:56] | Si, totalmente de acuerdo con la declaración es bonito poder ayudar. No en este trabajo, pero en uno anterior como una actividad la compañía fue | Yes, I totally agree with the statement, it's nice to be able to help. Not in this job, but in a previous one as an activity the company |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-30 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | a limpiar parte del Anacostia y fue una actividad muy divertida que se hizo en la compañía. | went to clean part of the Anacostia and it was a very fun activity that was done in the company. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:06:56] - [01:07:02] | ¿para recoger la basura que hay regada a lado del rio? | To pick up the trash that is strewn along the river? |
| Juan | [01:07:02] - [01:07:12] | Si claro, y al recoger la basura creo que los separaron me acuerdo en equipos y los que recogían más, como se dice ¿peso? | Yes of course, and when picking up the garbage I think they separated them into teams, I remember, and the ones that picked up the most, how do you say "weight"? |
| Moderator | [01:07:12] - [01:07:15] | ¿Ósea era como un concurso? | So it was like a contest? |
| Juan | [01:07:15] - [01:07:19] | Sí, le daban un premio a los que recogieran más peso de basura | Yes, they gave a prize to those who collected the most weight of garbage. |
| Moderator | [01:07:15] - [01:07:24] | Eso como un incentivo para hacer okay muy bien ¿Bety que me dices? | That was like an incentive to do okay, Betty, what do you say? |
| Bety | [01:07:24] - [01:07:27] | Totalmente de acuerdo | I totally agree. |
| Moderator | [01:07:27] - [01:07:29] | Okay, ¿Por qué? | Okay, why? |
| Bety | [01:07:29] - [01:08:01] | Porque no me gustan que estén las cosas sucias, pero igual me ayudaría que este limpio, porque a veces hay personas que pasan o comen algo y lo tiran o lo dejan ahí entonces, eso definitivamente no es saludable ni para el medio ambiente ni para uno, no. | Because I don't like things to be dirty, but it would still be helpful for it to be clean, because sometimes there are people who pass by or eat something and throw it away or leave it there, so that's not healthy for the environment or for you, no. |
| Moderator | [01:08:01] - [01:08:32] | Correcto, okay muy bien. Okay, vamos con la segunda declaración, mis acciones contribuyen a la contaminación de la agua donde vivo. Mis acciones contribuyen a la contaminación de la agua donde vivo, o vamos a decir los seres humanos pero quiero que ustedes se reflejen un poco, las acciones diarias que uno hace puedes contribuir, o contribuyen, ¿Qué me dicen sobre esto? Juan, | Right, okay very good. Okay, let's go to the second statement, my actions contribute to water pollution where I live. My actions contribute to the contamination of the water where I live, or let's say human beings but I want you to reflect a little bit, the daily actions that one does can contribute, or do they contribute, what do you tell me about this? Juan, |
| Juan | [01:08:32] - [01:08:50] | Yo creo que, yo trato de reciclar, trato de por ejemplo no tirar el aceite cuando uno cocina, al caño creo al faucet, en el zinc trato de tirar en... | I think that I try to recycle, I try for example not to throw the oil when you cook, in the pipe I think in the faucet, in the zinc I try to throw in... |
| Moderator | [01:08:50] - [01:08:52] | En el drenaje... | In the drain... |
| Juan | [01:08:52] - [01:09:03] | Si lo tiro en la basura, en lo que es basura, trato con esas | If I throw it in the garbage, in what is garbage, I try |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-31 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | acciones así que, en este, totalmente en desacuerdo. | with those actions so, in this one, I totally disagree. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:09:03] - [01:09:13] | Okay, Cajuan, mis acciones contribuyen a la contaminación del agua del área donde vivo, ¿estás de acuerdo? ¿Qué tan de acuerdo estas? | Okay, Cajuan, my actions contribute to the water pollution in the area where I live, do you agree? How much do you agree? |
| Cajuan | [01:09:13] - [01:09:15] | Estoy algo en desacuerdo | I somewhat disagree |
| Moderator | [01:09:15] - [01:09:18] | ¿algo en desacuerdo? | Somewhat disagree? |
| Cajuan | [01:09:18] - [01:09:26] | [inaudible] | [inaudible] |
| Moderator | [01:09:26] - [01:09:28] | No te escucho bien, puedes... | I can't hear you very well, can you.... |
| Cajuan | [01:09:28] - [01:09:32] | [inaudible] | [inaudible] |
| Moderator | [01:09:32] - [01:09:45] | Di todo lo que dijiste, vamos a darle para atrás al CD , ¿qué fue lo que dijiste? | Say everything you said, let's go back to the CD, what did you say? |
| Juan | [01:09:45] - [01:09:55] | Dije en desacuerdo porque si trato de reciclar y contribuir para que no sea sucio el medio ambiente, pero a veces [inaudible] no sé cómo se dice en español. | I said in disagreement because I try to recycle and contribute so that the environment is not dirty, but sometimes [inaudible] I don't know how to say it in Spanish. |
| Moderator | [01:09:55] - [01:09:57] | Que a veces se te olvida | That sometimes you forget |
| cajuan | [01:09:57] - [01:10:02] | Si claro, pero trato lo mejor | Yes sure, but I try my best |
| Moderator | [01:10:02] - [01:10:03] | Okay, haces el intento. | Okay, you try your best. |
| Cajuan | [01:10:03] - [01:10:05] | Exactamente. | Exactly. |
| Moderator | [01:10:05] - [01:10:05] | Okay, Erica, ¿Qué me dices? | Okay, Erica, what do you say? |
| Erica | [01:10:05] - [01:10:40] | Igualmente, en desacuerdo, cuando salimos a tomar un líquido, agua llevamos botellas nos esperamos a botarlo en la casa, al igual cuando freímos algo el aceite lo vaciamos en botellas y tratamos de ponerlo con cuidado | We also disagree, when we go out to drink a liquid, water, we take bottles with us and we wait to throw it away in the house, and when we fry something, we pour the oil into bottles and try to put it carefully in them. |
| Moderator | [01:10:40] - [01:10:43] | Okay y Bety. | Okay and Bety. |
| Bety | [01:10:43] - [01:11:30] | Soy muy cuidadosa con todo lo que es, si me gusta contribuir al buen funcionamiento de todas las cosas. Aquí en mi casa hacemos mucho reciclaje, separamos todo, que esto aquí esto acá, y a veces una cosa, otra cosa y siempre nos gusta inclusive si yo veo algo que esta tirado por mi camino y es algo que no... | I am very careful with everything; I like to contribute to the good functioning of everything. Here in my house, we do a lot of recycling, we separate everything, this here, this there, and sometimes one thing, another thing, and we always like to even if I see something that is thrown on my way and it is something that I don't... |
| Moderator | [01:11:30] - [01:11:32] | ¿usted lo recoge de una vez? | Do you pick it up? |
| Bety | [01:11:32] - [01:11:33] | Lo recojo. | I pick it up. |

|  | [01:11:33] - [01:12:19] | Okay muy bien, muy bien pues vamos a parar ahí el show de la pantalla, ahora vamos a hablar aquí entre nosotros. Ahora vamos a hablar sobre lo que es acciones personales que nosotros tomamos ya que estamos hablando de ese tema, tres preguntas y después quiero saber su opinión. ¿Cuáles son algunas cosas que puede hacer en su vida personal o a diario para ayudar a que el agua y las tierras cercanas a donde usted vive sean más limpias y saludables? ¿Quién quiere empezar? | Okay very good, very good so we are going to stop the screen show there, now we are going to talk here among ourselves. Now let's talk about what are some personal actions that we take while we're on the subject, three questions and then I want to get your opinion. What are some things that you can do in your personal life or daily to help make the water and the land near where you live cleaner and healthier? Who wants to start? |
| :---: | :---: | :---: | :---: |
| Speaker | [01:12:19] - [01:12:20] | Yo voy entonces. | I'll go then. |
| Moderator | [01:12:20]-[01:12:22] | Okay, muy bien. | Okay, very good. |
|  | [01:12:22] - [01:12:45] | Yo pienso que en mi ciudad seria tener mas reglas, mas estrictas, para hacer mas reciclar, pienso que aquí no hay casi los barriles de basura para reciclar, solo hay para basura normal | I think that in my city it would be better to have more rules, stricter rules, to do more recycling, I think that here there are almost no trash barrels for recycling, there are only for normal garbage. |
| Moderator | [01:12:45] - [01:12:47] | Que se necesitan más... | That we need more... |
| Speaker | [01:12:47] - [01:12:49] | Contenedores de reciclaje | Recycling garbage cans |
| Speaker | [01:12:49] - [01:12:50] | Sí. | Yes. |
| Moderator | [01:12:50] - [01:13:10] | De reciclaje, okay muy bien ¿Quién más? <br> Voy a repetir, cuales son algunas cosas que puede hacer en su vida personal para ayudar a que el agua y las tierras cercanas a donde viven sean mas limpias y saludables | Recycling, okay very well Who else? <br> I'm going to repeat, what are some things you can do in your personal life to help make the water and the land near where you live cleaner and healthier? |
| Juan | [01:13:10] - [01:13:38] | Bueno, uno puede ser voluntario como dije, ayudar de vez en cuando hay programas que cada lago, rio tienen en sus websites para, que piden gente para ayudar a limpiar. Otra manera, también si uno no quiere hacer eso, uno puede hablar también con su gobierno local en su townhall meeting, para tener reglas mas estrictas. | Well, one can volunteer as I said, help from time to time there are programs that every lake, river have on their websites for, that ask for people to help clean up. Another way, also if one doesn't want to do that, one can also talk to their local government in their townhall meeting, to have stricter rules. |

| :--- | ---: |

Segment G: Spanish language group, English translation; July 10, 2022

| Moderator | [01:13:38] - [01:13:40] | Como dijo Cajuan. | As Cajuan said. |
| :---: | :---: | :---: | :---: |
| Juan | [01:13:40] - [01:14:06] | Claro, uno puede hacer eso, porque uno nota porque por ejemplo en DC hay los trashcans los trashbins,y si cruzas a Arlignton ellos tienen como solar power trashcans en algunas secciones que están completamente cerrados, una sección es para reciclaje y otra es de basura, se nota la diferencia en dinero es a lo que yo voy | Sure, one can do that, because one notices because for example in DC there are the trashcans the trashbins, and if you go across to Arlignton they have like solar power trashcans in some sections that are completely closed, one section is for recycling and one section is for trash, you notice the difference in money is what I'm saying.. |
| Moderator | [01:14:06] - [01:14:12] | Si , el presupuesto que dedican a la limpieza ambiental. | Yes, the budget they dedicate to environmental cleanup. |
| Juan | [01:14:12] - [01:14:15] | Es una diferencia grandísima. | It's a huge difference. |
| Moderator | [01:14:15] - [01:14:19] | Okay, muy bien dicho, Bety, ¿Qué me dice? | Okay, very well said, Bety, what do you say? |
| Bety | [01:14:19] - [01:14:37] | Para empezar, uno tiene que empezar desde casa, poque desde casa desde ahí sale todo para los ríos, los riachuelos, los laguitos y todo se va por ahí | To begin with, one has to start at home, because from home everything goes out to the rivers, the streams, the lakes, and everything goes out that way. |
| Moderator | [01:14:37] - [01:14:49] | Ósea lo que haces en tu casa, eso sale para afuera para los riachuelos, los ríos, los lagos, también inclusive al mar, porque todo llega al mar | So, what you do at home goes out to the streams, the rivers, the lakes, and even to the sea, because everything goes to the sea. |
| Bety | [01:14:49] - [01:15:00] | Exacto, entonces mientras tu ordenes todas esas cosas en tu casa vas a poder cuidar tu medio ambiente porque va llegar... | Exactly, so as long as you take care of all those things in your house, you will be able to take care of your environment because it will reach... |
| Moderator | [01:15:00] - [01:15:07] | Lo que uno bota o lo que uno usa en la casa muy bien, okay Erica. | What you throw away or what you use at home is fine, okay Erica. |
| Erica | [01:15:07] - [01:15:37] | Estoy también de acuerdo, los voluntariados, ayudar más en el reciclaje, en el caso mío que yo tengo perrito, más lugares para poner las pupus del perrito porque no hay muchas ya como antes, porque mucha gente se olvida o se hace el loco y lo deja botado. | I also agree, volunteering, and helping more in recycling, in my case because I have a puppy, more places to put the poop because there aren't many as before, because many people forget or act crazy and leave them thrown away. |
| Moderator | [01:15:37] - [01:16:39] | Y eso, bueno quien quiere caminar o quien quiere estar en agua donde hay pupu de perrito, hay que incrementar los lugares o los postes donde haya la fundita esa donde la | And that, well who wants to walk or who wants to be in water where there's puppy poop, you have to increase the places where there's the little bag where |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-34 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | gente se deshaga de la pupu de su perro, okay, muy bien. <br> La próxima pregunta, es ¿algunas de estas cosas parecen inconveniente o demasiado un cambio de estilo de vida o es algo que está modificando su vida de diario? ¿es un cambio muy grande o es poco cambio? Eso es lo que quiero saber maso menos. | people get rid of their dog poop, okay, very good. The next question is, do any of these things seem inconvenient or too much of a lifestyle change or is it something that is changing your daily life, is it a big change or is it little change? That's what I want to know more or less. |
| :---: | :---: | :---: | :---: |
| Bety | [01:16:39] - [01:16:41] | Es de mi vida diaria | It's from my daily life. |
| Moderator | [01:16:41] - [01:16:42] | De su vida diaria, okay, Erica. | From your daily life, okay, Erica. |
| Erica | [01:16:45]- [01:16:50] | Creo que también, algo de vida diaria. | I think it's also, some of your daily life. |
| Moderator | [01:16:50] - [01:16:51] | Okay, ¿y Juan? | Okay, and Juan? |
| Juan | [01:16:51] - [01:16:55] | ¿puedes repetir la pregunta exactamente? | can you repeat the question exactly? |
| Moderator | [01:16:55] - [01:17:47] | Si , ¿alguna de estas cosas le <br> parece inconveniente a <br> alguno? Como que llevar más funditas para recoger la pupu del perro, o tomar un régimen de reciclaje estricto en su hogar, porque todo lo que uno bota llega al mar y si lo bota responsablemente pues no llega al agua, como Bety estaba diciendo, esos cambios pequeños vamos a decir, de su vida diaria ¿es un cambio muy grande, muy brusco en su vida cotidiana? ¿O le parece doable, le parece algo que puede incorporarse como algo de su vida de diario? | Yes, do any of these things seem inconvenient to anyone? Like carrying more doggy bags, or taking a strict recycling regime at home, because everything you throw away gets into the sea and if you throw it away responsibly it doesn't get into the water, as Bety was saying, those small changes, let's say, in your daily life, is it a very big change, a very abrupt change in your daily life? Or does it seem doable, does it seem something that can be incorporated as something in your daily life? |
| Juan | [01:17:47] - [01:18:33] | No, si no es ningún problema incorporar eso o mas cambios, tal vez lo difícil seria que algunas veces la comunidad donde uno vive no tenga acceso por decir al reciclaje, o si algunas personas, uno tiene que seguir educando. Pero también como estaba diciendo la señora Bety, comienza desde su casa, es la misma diciplina, pero algunas veces puede ser que uno se olvide de algo, y uno tiene que tener esa consistencia yo creo que no es difícil | No, it is not a problem to incorporate that or other changes, maybe the difficult thing would be that sometimes the community where you live does not have access to recycling, or if some people do, you must continue educating. But also, as Mrs. Bety was saying, it starts from home, it is the same discipline, but sometimes you may forget something, and you must have that consistency, I think it is not |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-35 |  |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | modificar y hacerlo, yo creo que lo difícil es tener esa diciplina. | difficult to modify and do it, I think the difficult thing is to have that discipline. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:18:33] - [01:18:48] | La diciplina a uno mismo para seguir haciéndolo, okay muy bien y Cajuan, ¿Qué me dice? ¿te parece conveniente hacer este tipo de modificación de comportamiento o tu crees que es aceptable? | The discipline to keep doing it, okay very well and Cajuan, what do you say? do you think it is convenient to do this type of behavior modification or do you think it is acceptable? |
| Cajuan | [01:18:48] - [01:19:12] | Yo creo que es aceptable, como dice todo mundo, todos mis compañeros dicen que empieza en casa, y de verdad que lo máximo que tú puedes hacer, es lo que puedes hacer tu mismo. Y después, como dice Juan, educar a las personas la misma mentalidad. | I think it is acceptable, as everyone says, all my colleagues say that it starts at home, and really, the most you can do is what you can do yourself. And then, as Juan says, educate people with the same mentality. |
| Moderator | [01:19:12] - [01:19:47] | ¿Cómo educar? Puede ser como campaña de los medios sociales, hacemos un sobre que le llegue a su casa, como podermos hacer llegar esta educación de como cuidar el medio ambiente, del agua lo principal, que nuestras acciones contribuyen al deterioro de la calidad de agua y como mejorar la calidad del agua con las cosas... How do I get that message to you? | How to educate? It can be as a social media campaign, we make an envelope that reaches your home, how can we get this education of how to take care of the environment, of water the most important thing, that our actions contribute to the deterioration of the quality of water and how to improve the quality of water with things... How do I get that message to you? |
| Cajuan | [01:19:47] - [01:19:58] | Creo que en las sociales redes yo uso las sociales redes para todo entonces, ahí fuera donde yo voy a educar a la gente. | \| think on social media | use social media for everything so that's where I'm going to educate people. |
| Moderator | [01:19:58] - [01:20:00] | Okay, ósea Tiktok, Twitter, ¿de qué estamos hablando?r | Okay, so Tiktok, Twitter, what are we talking about? r |
| Cajuan | [01:20:00] - [01:20:06] | Si claro, Tiktok, Twitter, la mayoría Tiktok porque se esta haciendo popular | Yeah sure, Tiktok, Twitter, mostly Tiktok because it's becoming popular. |
| Moderator | [01:20:06] - [01:21:13] | Ósea hacer un video, de como cuidar el medio ambiente, pero, okay eso hemos ido también de la gente joven como tú. Okay, la próxima tiene que ver con un modo de pensar, hay algunas personas que piensan que darle mas acceso, a las personas, al publico en general a cuerpos | I mean making a video, how to take care of the environment, but, okay that's what we've been going too from young people like you. Okay, the next one has to do with a way of thinking, there are some people who think that giving people, the |

Segment G: Spanish language group, English translation; July 10, 2022

|  |  | de agua y vamos a decir paisajes o paraderos naturales, si uno le da más acceso a la ciudad, a la vecindad donde uno vive, si hay mas acceso sube como ese amor de cuidar el agua o los sitios naturales ¿ustedes creen que eso es cierto o están en desacuerdo con ese modo de pensar? ¿Qué me dice Juan? | public in general, more access to bodies of water and let's say landscapes or natural places, if you give more access to the city, to the neighborhood where you live, if there is more access, it increases the love of taking care of the water or the natural places, do you think that is true or do you disagree with that way of thinking? What do you think Juan? |
| :---: | :---: | :---: | :---: |
| Juan | [01:21:13] - [01:21:52] | No lo sé, yo diría que estoy neutral porque en muchos casos puede hacer que gente vaya a esa área y cómo van todo el tiempo la quieren cuidar. Pero también no sé, hay casos donde gente va a un lugar, no lo aprecia, y lo descuida, entonces vuelvo a lo que dijeron todos se trata mas de tratar uno de si puede educarse o esa educación que haiga antes de dar ese acceso a esos cuerpos de agua, porque si no se cuidan ya no van a estar... | I don't know, I would say that I'm neutral because in many cases it can make people go to that area and how they go all the time they want to take care of it. But also I don't know, there are cases where people go to a place, don't appreciate it, and neglect it, so I go back to what everyone said it's more about trying to educate yourself or give that education before giving access to those bodies of water, because if you don't take care of them they're not going to be.... |
| Moderator | [01:21:52] - [01:21:56] | Sin la educación, no vale la pena. | Without the education, it's not worth it. |
| Juan | [01:21:56] - [01:21:58] | Exacto, en mi opinión si. | Exactly, in my opinion, yes. |
| Moderator | [01:21:58] - [01:22:00] | Okay, ¿Qué me dice Erica? | Okay, what do you think Erica? |
| Erica | [01:22:00] - [01:22:16] | Yo creo que sería, estaría buena idea la de dar acceso, pero a la vez teniendo restricciones como las políticas, se deberían requerir para entrar a ciertos lugares | I think it would be, it would be a good idea to give access, but at the same time having restrictions like the policies, should be required to enter certain places. |
| Moderator | [01:22:16] - [01:22:32] | Sí, para proteger la área también, ósea tener un área específica para donde la gente pueda tener sus actividades y todo eso pero, tener restricciones. | Yes, to protect the area also, I mean to have a specific area where people can have their activities and all that but, to have restrictions. |
| Erica | [01:22:32] - [01:22:33] | Así es, | That's right, |
| Moderator | [01:22:33] - [01:22:36] | Okay que me dice la señora Bety. | Okay what does Mrs. Bety thinks? |
| Bety | [01:22:36] - [01:23:24] | Yo hable hace un momento referente a un parque que me gusta mucho, y vamos y tiene | I mentioned a moment ago about a park that I like very much, and we go |

|  |  | todo como digo, este para reciclaje, para basura y la gente respeta mucho eso. Entonces cuando ya uno ve, que dice lo que dice, a veces hay personas que no colaboran, pero eso es lo que deberíamos de ver, nosotros contribuir al orden público, pero a veces uno peca como metiche. | there and it has everything, as I said, this one for recycling, for garbage, and people respect it very much. So when you see, what you say, sometimes there are people who do not collaborate, but that is what we should see, we should contribute to public order, but sometimes one can be a bit of a busybody. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:23:24] - [01:23:26] | Si, es cierto | Yes, it is true |
| Bety | [01:23:26] - [01:23:29] | Porque si pones orden te pueden decir a ti que te importa o algo... | Because if you put order they can tell you that you care or something... |
| Moderator | [01:23:29] - [01:24:45] | Puede haber alguna recriminación o que te digan [inaudible], que comiencen a pelearle a uno, sí. Estoy de acuerdo porque eso es mucha presión para el publico, es cierto para una persona, okay, muy bien hemos hablado de muchas cosas, esta es la ultima pregunta del día, hemos hablado de muchas cosas y quiero dar la vuelta, vamos a empezar con Erica, las damas primero y despues los caballeros, quiero que cierren los ojos y visualicen el lugar ideal, el sitio ideal donde hay acceso público en un cuerpo de agua, ¿Cómo se parece? ¿Qué características tiene? ¿o no tiene? ¿Qué tanta gente hay o no hay? Empezamos con Erica, tu lugar ideal., ¿Cómo sería? | There may be some recrimination or they may tell you [inaudible], they may start to fight you, yes. I agree because that's a lot of pressure for the public, it's true for a person, okay, all right we've talked about a lot of things, this is the last question of the day, we've talked about a lot of things and I want to go around, let's start with Erica, ladies first and then the gentlemen, I want you to close your eyes and visualize the ideal place, the ideal place where there is public access on a body of water, what does it look like, what characteristics does it have, or doesn't it have, how many people are there or aren't there? Let's start with Erica, your ideal place, what would it look like? |
| Erica | [01:24:45] - [01:24:50] | Mi lugar ideal, seria la playa pero que no haya gente | My ideal place would be the beach, but not crowded. |
| Moderator | [01:24:50] - [01:24:54] | Que no haya mucha gente | Not too many people |
| Erica | [01:24:54] - [01:25:04] | No, o si no habría un pequeño puente para caminar un poco más adentro al mar. | No, or else there would be a small bridge to walk a little further inland to the sea. |
| Moderator | [01:25:04] - [01:25:07] | ¿Cómo un muelle? ¿Qué tenga un muelle? Okay, okay ¿Qué más? | Like a pier? That has a pier? Okay, okay. What else? |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-38 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Erica | [01:25:07] - [01:25:15] | Ese seria mi lugar ideal siempre voy a esos lugares | That would be my ideal place I always go to those places. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:25:15] - [01:25:19] | Okay, muy bien. Okay, señora Bety. | Okay, all right. Okay, Mrs. Bety. |
| Bety | [01:25:19] - [01:25:51] | Mi lugar ideal seria una playa limpia, un mar limpio donde pueda estar en el agua normalmente, porque a veces, bueno aquí la mayoría casi de los mares son limpios, pero | My ideal place would be a clean beach, a clean sea where I can be in the water normally, because sometimes, well here most of the seas are almost clean, but what else would this place have? |
| Moderator | [01:25:51] - [01:26:03] | ¿Qué otra cosa tendría este lugar? ¿Qué otra característica tendría este lugar? | What else would this place have, what other characteristic would this place have? |
| Bety | [01:26:03] - [01:26:07] | Lo que no me gusta, bueno para mi | What I don't like, well for me |
| Moderator | [01:26:07] - [01:26:09] | Si , también dime lo que no te gusta. | Yes, also tell me what you don't like. |
| Bety | [01:26:09] - [01:26:11] | A mi no me gusta la arena | I don't like sand |
| Moderator | [01:26:11] - [01:26:13] | ¿pero le gusta la playa? | but you like the beach? |
| Bety | [01:26:13] - [01:26:29] | Me gusta la playa, pero no me gusta la arena. Entonces yo tengo que estar metida en el agua, entonces ya no quiero sentarme, ya no quiero echarme ni nada en la arena no me gusta. | I like the beach, but I don't like the sand. Then I must be in the water, so I don't want to sit down, I don't want to lie down or anything in the sand, I don't like it. |
| Moderator | [01:26:29] - [01:26:30] | ¿Ósea usted quiere un lugar donde se pueda bañar? | So, you want a place where you can bathe? |
| Bety | [01:26:30] - [01:26:40] | Como una banca para sentarme, así quisiera, pero... | Like a bench to sit on, I would like that, but.... |
| Moderator | [01:26:40] - [01:26:58] | Okay pues muy bien, ¿Cajuan, que me dice?, cuál es tu lugar ideal de un sitio publico con acceso al agua, playa, mar o lago que se yo, cuál es tu sitio ideal, ¿qué tiene que contenido tiene? | Okay, well, what do you say, what is your ideal place in a public place with access to water, beach, sea, or lake, what is your ideal place, what does it contain? |
| Cajuan | [01:26:58] - [01:27:15] | Bueno mi lago, porque sería un lago, que tuviera lugares para poner la basura y reciclar, que tiene una seguridad donde dice, donde tiene las reglas como... | Well, my lake, because it would be a lake that has places to put garbage and recycle, that has a security where it says, where it has rules like.... |
| Moderator | [01:27:15] - [01:27:24] | Ósea que tiene equis cantidad de pies de profundidad, que diga puedes nadar aquí, no allá. | So, it has a certain number of feet deep, that says you can swim here, you can't swim there. |
| Cajuan | [01:27:24]-[01:27:26] | Como compartir en el lago. | Like sharing in the lake. |
| Moderator | [01:27:26]-[01:27:28] | El comportamiento, exacto | The behavior, exactly |
| Cajuan | [01:27:28] - [01:27:37] | Exacto, como no fumar y así y también tenía un zipline, para bajar al lago. | Exactly, like no smoking and so and also had a zipline, to go down to the lake. |
| Moderator | [01:27:37]-[01:27:39] | Un zipline, okay. | A zipline, okay. |

| Chesapeake Bay Program <br> Public Access Research | Focus Group Transcript |
| :--- | ---: |
| Page 5G-39 |  |

Segment G: Spanish language group, English translation; July 10, 2022

| Cajuan | [01:27:39] - [01:27:41] | $Y$ también una actividad de kayak. | And also a kayaking activity. |
| :---: | :---: | :---: | :---: |
| Moderator | [01:27:41] - [01:27:47] | Actividad de kayak y zipline okay, muy bien ¿Qué más? | Kayak activity and zipline okay, very good. What else? |
| Cajuan | [01:27:47] - [01:27:55] | $Y$ ya, que fuera mucha gente, como un recreational park. | And already, that it was a lot of people, like a recreational park. |
| Moderator | [01:27:55] - [01:28:02] | Okay, recreacional, muy bien, gracias. Y para terminar, Juan. | Okay, recreational, very good, thank you. And finally, Juan. |
| Juan | [01:28:02] - [01:28:05] | ¿mi lugar ideal? | My ideal place? |
| Moderator | [01:28:05] - [01:28:08] | Sí señor. | Yes, sir. |
| Juan | [01:28:08] - [01:28:38] | Sería una playa que este también limpia, que tenga recreación, como si quiero jugar volleyball o futbol que haya un restaurant, botes de basura y haya un [inaudible] que lleve así de lejos, también que haya unas cataratas que lleven a un rio, y haya más recreación allá al fondo, donde se pueda hacer kayaking y todas esas otras cosas. | It would be a beach that is also clean, that has recreation, like if I want to play volleyball or soccer, there should be a restaurant, trash cans and there should be a [inaudible] that leads that far, there should also be waterfalls that lead to a river, and there should be more recreation there at the end, where you can do kayaking and all those other things. |
| Moderator | [01:28:38] - [01:28:42] | ¿Qué haya como una via de cómo llegar a las cataratas? | That there is a way to get to the waterfalls? |
| Juan | [01:28:42] - [01:28:46] | Si, también todo eso, y que también más lejos haya un lago. | Yes, all of that, and further away there should also be a lake. |
| Moderator | [01:28:46] - [01:28:50] | Un lago también, ósea playa, lago y cataratas | A lake as well, so beach, lake, and waterfalls? |
| Juan | [01:28:50] - [01:28:51] | Sí. | Yes. |
| Moderator | [01:28:51] - [01:29:46] | Okay, muy bien. Bueno pues eso es todo por el día de hoy, un aplauso para todos, ya al final al grupo vamos a enviarle por e-mail que ustedes nos dieron, los 100 dólares y la ganadora va a recibir 150. Bien, pues fue un placer dialogar con ustedes y de parte de Opinion Works, muchas gracias por su participación y esperamos en una oportunidad en el futuro nos pueda también los pueda ver de nuevo, pues muchas gracias y que tengan muy bonito día. | Okay, very good. Well, that's all for today, a round of applause for everyone, and at the end we are going to send the group the 100 dollars by e-mail that you gave us, and the winner will receive 150 dollars. Well, it was a pleasure to talk to you and on behalf of Opinion Works, thank you very much for your participation and we hope to see you again in the future, thank you very much and have a nice day. |
| Everyone | [01:29:46] - [01:29:48] | Muchas gracias. | Thank you very much. |
| Moderator | [01:29:48] - [01:29:50] | Okay, bye, bye, adiós. | Okay, bye, bye, bye, goodbye. |

Interviewer: All you have to do... Oh, there is our cue that we're recording. All you have to do is just give us your opinion, tell us how you feel. This isn't, of course, a right or wrong test. We are recording only because we are going to auto transcribe as we're talking. The Zoom gives us the notes. We don't have to type anything, and it's much easier that way. But we're not going to say, "Ivy said..." in the report, We're going to obviously protect your identity. These market research studies are, $99.9 \%$ of them, they're all anonymous and confidential, unless I say, "Hey, Ivy, we're going to be talking about this. We do need..." We're upfront with that, and you would opt in on that. And then Steve, my colleague, is also on the call. And then we're just going to be here just asking questions and hearing your thoughts on the topic. Do you have any questions for me before we begin?

## Participant: No.

I: Okay. Awesome. All right. So just a brief intro, where do you live? Who do you live with, pets included? And then what do you like to do for fun?
P: I live in Baltimore with my husband and my two children. No pets. I like to... Let's see, I love to travel. This weekend I found a new... Well, so I actually went backpacking for the first time.
I: Oh, you did? Okay.
P: Yeah.
I: Where did you go?
P: I went past Gettysburg, Pennsylvania a little bit and got on the Appalachian Trail. So I was up there since Friday, that's why I look crazy right now. But it was like-
I: You don't look crazy. You don't look crazy.
P: Okay. I'm glad you can't see all of it. But yeah, I actually just got back in the house not too long ago. That was cool, so I think that's going to be my new thing, more hiking, which I do usually walk around my neighborhood and stuff like that. But actually to get out on the trails and do the whole backpacking thing, I like it. I'm feeling it. It's going to be my new thing. And of course, reading, and podcasts, and stuff like that.
I: Okay. And your outdoor activities that you like to do, obviously now hiking the Appalachian Trail is one of them. What's nearby your home?
P: Yeah. Herring Run Park is a trail, and then Lake Montebello, and a little bit further... Well, a few miles further is like Druid Hill Park, but I haven't ventured that far yet. But, yeah.
I: What's the closest one to you?
P: Herring Run.
I: Okay. Okay. And we're going to be talking about how people's emotions have evolved throughout the course of their life regarding the outdoors and the environment, particularly around water ways near where they live. So we're not talking about the ocean, we're not talking about Ocean City, we're not talking about the beach. We're talking about rivers, lakes, streams, the bay, the harbor area, bays, things close to cities like that. So what brought that change? I'm not talking about where... Or maybe so, maybe you had an epiphany and you woke up one day and said, "You know what? I care more about the environment and I care more about water and the quality of water in these outdoor spaces." Or was this something that happened throughout time? A gradual intro to it. For different people it takes... It's different. I just want to know about you, maybe the attitudinal change happened in their adult, very much well into their adult life. So I just want to know what got you to that point, if at all?
P: I think... I haven't always lived in Baltimore. I'm actually from Connecticut and kind of suburban, so I didn't really live in the city, so I never thought about it. There was never a problem with like my tap water, I could drink, and that water is pretty good up there to drink straight from the tap. It doesn't taste nasty. It doesn't have a funny taste. There wasn't garbage in the street like if I... There's always trash cans, and the trash cans are frequently emptied, so it wasn't like garbage. I've never seen people throw garbage out of their cars. So I moved here about 16 years ago, and of course over time, it wasn't as bad as it is right now, but over time, I see people throwing garbage out of their car. That's just weird to me. Like whole garbage, not even a cigarette, but a whole container of Royal Farms chicken, like you're done with it so you just throw it out and then-
$\mathrm{I}: \quad$ Into the street?
P: Yeah. Just out of their car into the street. So of course, when rain comes-
I: How does it make you feel when you see that?
P: It's disgusting. I'm like, "You're disgusting." And even just walking down the street, like if they do it in front of my house like, "Pick your shit up." Oh, excuse me. "Pick your stuff up."
I: No, it's allowed. We can say that word. We can say any word you want.

## Interview 1: Ivy; October 23, 2022

P: $\quad$ II live here, I don't know what you do in your house, but I don't have garbage right in front of my house. I'm pretty sure you have a trash can. If you need one or you have garbage, just ask for a bag. It's not that serious." But it's just like this... I don't know, like a reflex for some people, you just throw garbage down. So then if you see the storm drains, there's always... It's not sticks and stones, no, it's freaking containers from 7-Eleven pizza, little slice boxes and-
I: So plastics, like the plastics and stuff.
P: Yeah. It's just straight diapers. Like, really?
I: Right.
P: Then you could see it more because as the storms... I feel like storms and things are getting stronger. And so when you see the storms coming, and then in the middle of the street after the storm is gone, it's just a whole pile of garbage that the storm drain is clogged up. The garbage is just right there in the middle of the street, and it's just like, "Seriously? Do you know where this water is coming from?" And then even when I walk, Herring Run Park, they have a stream and stuff like that, so people could fish, but it says, "Don't eat it." There's signs. It says, "Be careful of the water." That's kind of scary. What if something happened, and I've had an epiphany kind of... Well, not epiphany, but even this weekend when I was hiking, the stream that I'm not supposed to get water from, like standing water, because there could be those things that'll eat my brain.
I: Well, the amoebas, the amoeba flesh eating bacteria. Yeah.
P: So you want to find it from a running stream. Well, it was dried up. So that makes me think, what's going to happen? What do I do if I can't find... Well, I was able to find water, but I mean, pollution, I can't go to this stream because I'm pretty sure there's some toxic crap in there from people throwing their crap and their plastics and God knows what else in there or whatever. So it just makes me think more. And then it's like I have-
I: So being out there made you more aware of how littering and pollution-
P: Impacts.
I: Impacts. Okay. Okay. How about your kids? How old are your children?
P: $\quad 15$ and 22.
I: Oh, okay. And so are they out with you, or are you just kind of doing this on your own?
P: Yeah, I'm out there doing it on my own, but I know for a fact that they're not throwing garbage out of the damn car. I know that they put their garbage in the garbage can like they're supposed to. One thing that I'm getting on them about now too is the plastic. I used to buy bottled water a lot, but I feel like that's kind of wasteful too, because then you're just drinking this plastic bottle where we have tap water, and we have a filter, and I have the fridge with the filter. So just use a reusable thing, because all that plastic, it has to go somewhere. And I know that plastic doesn't break down and it's still going to seep into our body some kind of way. So I'm more mindful of that.
I: When did that change? When did that happen, that shift for you?
P: I feel like the pandemic, honestly, because I had more time to sit still and think about everything. And when the pandemic first hit, money, I'm watching money like, "This is stupid. Why am I buying..." That's probably the first thing. [inaudible 00:09:29]-
I: $\quad$ So it was an economic decision?
P: Yeah, at first, like, "Why am I buying this when we have water right here that I have to pay for, and we have filters, and we have the reusable cups that we can use? Why am I doing this? This is stupid."
I: So there's an economic incentive, but then you also talked about the environmental impact.
P: Exactly.
I: Okay. Okay. Okay.
P: But economic first, yeah, the economic first, because when-
I: So the pandemic slowed you down and made you think about the environment in that way? Or was it something else before that or after the pandemic?
$\mathbf{P}: \quad$ First the garbage, the straight garbage.
I: The trash.
P: And I know that, even from my... And it's probably my kid too, from elementary school, they had trips to the Chesapeake Bay and she talked about it, like little projects that they talk about like, "Where does your water come from?" And how this little thing can impact you far away because this water has to go somewhere. Where do you think it's going? And then it might end up-
$\mathrm{I}: \quad$ So it educated her and you?
P: Basically, yeah.

## Interview 1: Ivy; October 23, 2022

I: Okay.
P: And then that gets my mind kind of going, and then just the garbage and then the pandemic I'm slowed down. And like, "Why am I spending this money on this horrible plastic when I don't have to?" You know what I'm saying? I mean, it's not like, you don't need a plastic reasonable bottle every time you go get water. That's stupid. Yeah. And then I start thinking, and again, the pandemic slowed me down so now I could read more. I can hear about all the plastic that's actually in our body, and is part of our DNA right now because we have those microplastics that are in our system. I never thought about that. So it's just like a progression. And then now that I'm kind of more in nature and stuff like that, and I'm like, "Oh, this is so pretty." It could be toxic. How can something so beautiful be toxic?
I: Wow. Wow. That's a good... Steve, I hope you heard that. That's a money quote right there. "How could something so beautiful be so toxic?" Because like you were saying even, I mean, when you're outdoors and doing your hiking, they're basically telling you, "Hey, this can kill you."
P: Yeah. Right.
I: $\quad$ This beautiful little pond can kill you.
P: Kill you.
I: And I mean, of course, we're not talking about the amoebas, but maybe there's something in there that shouldn't be.
P: Yes, there's waste. Even not too long ago, Baltimore, they said... and this kind of threw me off too. So there was some type of toxin in the water, but they said it was in West Baltimore. So it's like, "Oh, in East Baltimore, you don't have to worry about it?" Water flows. If something's wrong in West Baltimore, I'm thinking that something's going to be wrong in East Baltimore too. Don't drink the water. Don't tell me that it's okay in East Baltimore, but not West Baltimore. This is not that big of a city. And then I just lost all faith in humans anyway, because I feel like people do stuff half assed anyway, and they're not going to tell us the whole truth. But you can't just say like, "Oh, West Baltimore."
I: Where do you get your information on these issues?
P: Usually it's the news if I'm watching it. But if it's something like that-
I: Is it news like local news?
P: Local news, yeah. Like local news.
I: What do you watch?
P: CBS.
I: Or what's the local CBS station? Is that where you're watching or reading?
P: Yeah. So I don't know the exact station, because I only have Filo, or one of those... Paramount, whatever Paramount is in the morning. CBS, I know it's CBS, local news in the morning, so I don't know what channel that equates to if I had Comcast or something like that.
I: Yeah, I think CBS owns Paramount... Or no, Paramount owns CBS.
P: $\quad$ Now owns CBS. Yeah. So that's my morning news station where I can get the weather and stuff and that local stuff. And then if it's something like serious, like the water issue, somebody's going to post it on social media or somebody's going to text me like, "Did you see the water? Don't drink the water." My mom in Florida, "Don't drink the water in Baltimore because..." I'm like, "Oh, really?" Then I have to go to the app or something like that. And I do get Fox 45 . I do get alerts about breaking news and stuff like that also. So I'm informed of the big, big things that are going on.
I: Okay. Okay. All right. And so now when you lived in Connecticut, did you have these kind of feelings towards the environment, or were they more developed after you moved to Baltimore?
P: $\quad$ Yeah, it was after I moved to Baltimore.
I: Okay. Okay. I mean, you definitely care about the environment around you, but does that care turn into some kind of action or motivation? I mean, I know that you're buying less water bottles, like individual water bottles you're talking about, right?
P: Right.
I: Okay. So you're buying less of those to minimize the plastic impact in the environment, are there other things that you've, any actions, any other actions that you've taken personally? For example, have you joined a group? Have you changed some kind of consumer behavior? Want to know more about that.
P: For me, I do recycle, and with Baltimore City, it's kind of easier now. So I don't have to have different bins for different type of things. So I have that big-
$\mathrm{I}: \quad$ So it's a single stream, right?

## Interview 1: Ivy; October 23, 2022

P: Yep. Single stream. So we do that. I do pick up garbage, especially after a storm, especially if it's really close to my house. I mean, not going miles out of my way or around the whole block, but in my immediate area, if I see garbage, I mean, I just take a bag and pick it up and throw it away. And if I can get the stuff from the storm drain, I will pick that stuff up that way. And I haven't joined any environment groups or anything like that, but just do my part. I think that just me paying more attention, cutting down on the waste that we have, is helping some type of way. I don't know. And hopefully it'll rub off and other people see me do it or, I mean-
I: How about in your family, like your husband and your children? How do they approach your, "Hey guys, we got to do this because this is how I feel about such and such thing. And not only for the environment, but for health reasons." Are they on board with your [inaudible 00:16:33]-
P: Yeah, they don't have a choice, because I'm the one that all-
I: Okay.
P: My husband for lunch, we used to have plastic containers he could just throw away after he eats his lunch. But I bought all glass stuff, so you come home and you wash it, you have an aluminum cup for your tea rather than one of those Dixie cups that you could just fill your tea up and stuff like that. And he takes regular silverware rather than the plastic disposable silverware. So I don't buy the disposable plates and stuff unless we're having a function, and usually it's the cardboard ones, like Chinette or something like that.
I: You've definitely moved from plastics into paper and reusable items. Okay.
P: Exactly.
I: Okay, that's awesome. And anything else?
P: Yeah, I think that's pretty much it. I know that I want to figure out more about composting, so that's my next thing that I'm going to try and see how that works, because I know nothing about that right now. I mean, I do a little bit, but I'm going to go into that next.
I: Okay. And then here's a question from Steve. What happened to cause all this change in Baltimore? What was it that... Thinking back, you mentioned about when your daughter was in school, you used to get those educational pamphlets, or the exercises, or the programs that they were running at the school. Was that it, or was it something else? Or was it a culmination of things? You being tired of seeing trash in the street, or what happened here?
P: I think that it's a lot of things. I know, for instance, in my neighborhood, I've seen the shift from home ownership to renters. And not that all renters are bad, not that low income is bad or anything like that, but I feel like when you actually own something, most times you take more care of it. And when it's not yours, you don't have this courage to care, more like, "Whatever, it's not mine, so whatever." There's no reason the alley should have garbage overflowing and that there's rats, but you don't care. So you'll just not put your garbage in the trash can.
I: So what changed inside of you personally? What changed in you? I mean, it feels like, "Okay, I feel like I have ownership. I feel like a sense... I got information from my daughter's school. I want to be more outdoors." I'm trying to think as you right now. "And I don't seeing trash and litter where I go to enjoy my recreation." What other feelings did that change kind of conjure up inside you?
P: I mean, all those that you said. I've never liked it, but I can do something about it. And I think too, like I said, the pandemic and just slowing down. A lot of times for me, even-
I: $\quad$ You moved from plastics to glass.
P: Yeah, and that was probably a money thing too. Financial. Like, "Why am I-
I: But you also did it for health reasons.
P: And health reasons, but it was probably the money part first. The money part when you're really-
I: $\quad$ So it has to make economic sense for you-
P: Exactly.
I: $\quad$... in order for you to feel, and maybe this isn't a fair statement, but am I right in assuming that it has to make economic sense for there also to be some kind of concern for the environment as well? Is that right, or is there more to that?
P: I mean, I think it's more to it because everything, of course, isn't about money. I don't have a problem with spending more money for something quality and I know that it's helping the environment. I don't have a problem with that. But initially to get me started, it's going to be a financial step. If I only have $\$ 85$ to last a family of four for the next two weeks until I get paid, why the hell am I buying water bottles? Why am I buying reusable this, or why am I eating takeout that I'll just throw... or go to 7-Eleven and get slices of pizza when I could just go to the grocery store and get a bag of rice, some beans, and a frozen pizza. [inaudible 00:21:29]-

## Interview 1: Ivy; October 23, 2022

I: $\quad$ Right. So making the dollar last.
P: Yeah.
I: $\quad$ And how about access to public spaces? Do you feel that that's expensive in Baltimore or are people able to get to the water or interact with the water, whether it's hiking, biking, walking, picnicking, kayaking, any of those? Are those out of pocket financially?
P: I think it's-
I: What do you feel?
P: So I feel like people don't know about it and people are scared of what they don't know about. So for instance, again, l'll share-
$\mathrm{I}: \quad$ Do you interact with the water?
P: Yes.
I: Okay.
P: So I do. But again, for me, before I did all that, it had to make economic sense. Of course I would love to go kayaking, but again, if I only have $\$ 85$ to last me, it's not really... I have to rent the canoe, I have to go farther out, maybe go to West Virginia, where else can I go? So I don't know places that would be close to me to do that. So I have to go far out. So if my money's tight, I'm not thinking about that. I'm just thinking about how to get more money at this point so that I can have the basic necessities.
I: And then also, you said something important that people fear what they don't know. So there has to be some communication made so that people like yourself, like your family know about, "Hey, not even... Just down the street in our neighborhood." Or, "We could take this bus and it'll take us straight to this nature center where they have kayaking down like half a mile from us." You don't know about those things. They have to be more known to you, right?
P: Exactly. And it can't be just like [inaudible 00:23:25]-
I: And then that way you don't have to go to West Virginia or whatever you said.
P: Right, exactly. But it can't just be on the parks and rec website, because who's just going to go like, "Hey, let me see what the parks and recs is going to offer."? It has to be-
I: Where do we put it so you can find out about it?
P: Just as loud as if there's a Drake concert or something like that. That'll be on 92Q. But it's not, you know what I'm saying? Like, "Hey, kayaking here." If it was out there the way that people-
I: So we need to put ads on 92Q to let people know, or on or on 92Q's website, or their social media like, "Hey, listen, there's a low cost kayak and you could rent a kayak for \$10 or \$5."
P: Yeah. Exactly.
I: Okay. So there has to be more interaction with media that Baltimoreans listen.. Is it Baltimoreans?
P: Yeah, Baltimoreans.
I: Baltimoreans listen... I don't know how you say-
P: Exactly. But it has to be something like that. Because if there's, like for instance, when it's back to school time, there's always ads about free backpack giveaways. So I know about that because everybody heard about it. It's on the radio, "Hey, come here. There's going to be the music people from 92Q, they're giving away backpacks." Or like the churches. Churches are a good way to get information out as well because they give out this, or we have the food giveaway. When they had the chicken, I remember again, height of pandemic, they're giving away chicken. You heard about that, I believe it was on the radio or some type of social media. The chicken was gone in like 10 minutes or so because there was a billion people out there getting this free chicken. So if you could give away free chicken, you could tell somebody that there's outside activities that you don't need to pay a whole bunch for and go far away.
I: Okay. All right. Well I'm going to ask you this question, we're almost wrapping up. Our client is the National Park Service. They are the federal organization that helps manage, that helps cities and states manage their public spaces, green spaces. What they want to do is to create more access points to the water. And they have a theory, and we're hoping... Well, it's more of a hypothesis. And they feel that if they give people more access points to water nearby where they live, that people would start caring more about it. Meaning not littering, cleaning, helping in clean up efforts, or by them enjoying it they tend to care more about it.
P: [inaudible 00:26:19] about it. Right.
I: So what do you think about that hypothesis? Is it true in your case?
P: I believe so. I definitely believe so, yes, 100\%. Just knowing that it's there and having access to it makes a world of difference. Again, for instance, I know my kids have always been in private school, but one of the trips that my daughter had was to northeast Maryland to some camp, I forgot what it's called or whatever. I

## Interview 1: Ivy; October 23, 2022

knew nothing about it. And I found out that there are camps over the summer that'll take them to the Chesapeake Bay and they could learn about the ecosystem and stuff like that. Of course it's expensive, but I didn't even know about it. But I'm pretty sure that if there's other people that actually found out about it, their kid really might be interested in it or it could be a family thing or whatever. So it was just getting the knowledge out there and then having it easily accessible to get to would make a world of difference.
I: Okay. And then what advice would you give the National Park Service? I know that we're putting ads on... what's it called?
P: 92Q.
I: $\quad 92 \mathrm{Q}$, and maybe some popup banners here and there, or whatever they call them, posts on social media to coordinate with churches and community organizations and schools to let them know about these access points, either free or low cost access points, make it make economic sense. That's what I heard from you.
P: Yeah, definitely.
I: What else? What other advice would you give them?
P: To make it... Okay, well, how do you say it? What's the word? What's the word? What is the word? Find people that represents that organization, the U.S. National Parks, that look like the people that you want to come. Right, right, right. So even when I went backpacking today, I have a lot of friends that are older or experienced and are like, "Oh, you're going to be the only black person there. Be careful." You watch all the scary movies, right? Because you know the black person is usually the first one to die.
I: And there's a lot of... That whole mess is just in the news, you hear about stuff like that every day. Yeah.
P: Exactly. Exactly. So you have to have people that look like us, or look like me, or whatever neighborhood you're trying to get to come that look like, so you know like, "Hey, black people do backpack." Right?
I: Yeah. Yeah.
P: Black people do fish, black people do kayak. Black people do everything that everybody else does, but we have to [inaudible 00:29:08]-
I: And can enjoy it.
P: And can enjoy it. Exactly. Black people live in their vans and RV across the country too. It's a thing. There are black people that do everything. There's black vegans, yes, there are. Yes, everybody doesn't eat chicken. Okay. But what I'm saying is-
I: I get it. I get it.
P: You get it.
I: Yeah.
P: $\quad$ So just make it make sense, especially when you have younger people, because they follow it, make a cartoon or something.
I: $\quad$ So what they call the DEI.
P: Yeah.
I: DEI in environmentalism has been happening, but slowly. But we need to make sure, especially if we're talking to Baltimore, we have to have people that look like us.
P: The community. Look like the community.
I: Yeah.
P: Yes. Definitely. And not old people either. Somebody that actually is in their 30s or 20s that are tree huggers, and love it, and are just so enthusiastic about it. Just don't have-
I: It cannot be just white people, which is-
P: Exactly.
I: Right. Right.
P: Yeah.
I: That makes it more accessible and believable. I can see myself in that person. Yeah. Okay. And also have, not have older people, have the-
P: Not just older, I mean, of course, older people are great because you get stuff, you get the knowledge that they have. But you know what I mean? Like if you want 15 year olds-

I: But it looks interesting for someone young and them not say, "Oh my God, it's going to be visiting my grandparents or something."
P: Exactly.
I: "It's not going to be boring. This is going to be something exciting for me to do, or cool for me to do."

Interview 1: Ivy; October 23, 2022
P: Exactly.
I: Okay. All right. Well, we are two minutes over. I'm so sorry.
P: It's okay.
I: $\quad$ That's it. That's all we have today. So around 7:00 PM Eastern Time, you'll receive your $\$ 75$ gift card. So thank you.

P: Thank you.
I: It'll be emailed to you. So thank you so much, Ivy. I appreciate it.
P: $\quad$ No problem. Thank you. You have a good evening.
I: Okay, bye-bye.
P: Bye, bye.

## Participant: I hear you.

Interviewer: Don't drink alone, Jamie. I'm drinking tea. Really, I promise. This is tea. No additives. Do you know what we're doing? We're going to talk about you and water and how much you care or don't care about it.
P: Correct.
I: I'm an independent moderator. This project is by Chesapeake Pay Institution Program Organization. And I'm not affiliated with them. If you love everything about water and love them, that's great. If you don't care about them, I don't care if. You hate that, I don't care either. But what I do want to ask you is to tell me the whole truth, nothing but the truth. If it feels like I'm asking you a question that's slanted or something, just say, "Wait a minute." And then just tell me what you want to tell me. Let me give you the very formal introduction now. Let's see. We're understanding how people's ideas about the outdoors and the water in particular might have evolved over the course of your life and what brought about that change. First of all, my name is Kathy. I live in Rehoboth. It's dark and gloomy outside. Most everything is wet. Where do you live?
P: Richmond, Virginia.
I: Is it gloomy near you?
P: Not today. Today's actually a pretty good day. Little cold, but it's getting better.
I: Say something Jamie that will make people... Let's go. Do you live by your lonesome? Do you live in an apartment? Do you live in a sprawling mansion? Do you live with others?
P: I live downtown and I live with Catherine whose laptop I'm using right now to do the Zoom. But we own our home in Richmond, downtown Richmond.
I: Congratulations.
P: Pretty close to the James. Right off the James almost.
I: Let's get to the trunks of it. When you think of water, I'm not talking about the ocean, I'm talking the water near you. I have question again. River streams, lakes or bays closer to where you live. It doesn't have to even be a remote place or fancier, pristine. Just thinking of the water near you. Tell me about that.
P: The James, it's pretty unique here. I don't know if you've ever been to Richmond. Part of the James is overflowing on one side and then the other side where some currents happen and then it's a lot of rocks. Just basically nothing can really get through at that point. Once you get closer to let's call it the higher buildings of lower downtown. But we're lucky the James is a historic river and it's something that's really helped our area out a lot. But I like to take my dog out to the James and walk him down the coastline of the river and it's something we've done for a while now so I'm definitely connected to the James River.
I: Tell me more about how you're connected to the James River or... Wait a minute. Are there any other bodies of water aside, from the ocean, any other bodies of water that you believe are yours that you access, that you look forward to seeing?
P: $\quad$ No, I'd say the James about it. I see it from our freshwater standpoint. I briefly lived in Arizona. I went to Arizona State. Arizona State is quite the opposite. There is not a lot of water. The drought's really crazy right now.
I: $\quad$ Are the temperatures 130 or something?
P: During the summer, yeah. They say it's a dry heat and I promise you it doesn't matter. It's still just as hot. You can't even really drink the water out of the faucet because it's so much minerals and just sediment in it that it's being cranked all the way from Colorado. It's several states over. I grew up in Richmond, went to school in Arizona State, came back. But just being here, it's just being able to open my faucet and have clean water running out drinkable, fresh water. It's obviously one of the biggest reasons I moved back to Richmond.
I: Serious? Clean drinking water is why you moved back?
P: Yeah, I'm telling you. The hard water out there, it'll stay in your bathtubs if you don't have a water softener. It's really hard.
I: Wait a minute. You could have moved to Alton, Illinois where they have clean tap water.
P: I didn't grow up here. I didn't grow up in Edmonton, Illinois.
I: $\quad$ The James River is yours then.
P: I feel I am a part of the river more than any other body of water. Yes.
I: What makes that so? Just because you grew up there, I grew up in Illinois and the Rock River is not mine. The James River is yours.
P: Yeah. When did you move? Just to try to clarify my answer.
I: I moved when I was 18 , which was not yesterday.

Interview 2: Jamie; October 24, 2022
P: Growing up in Richmond then now coming back to it and everything's changed. Obviously, Richmond has grown and the construction and all that, but the river itself, even the banks of the river are losing its luster, let's call it, from when I was a kid to now and you can definitely tell.
I: Has the way that you feel about the James changed? You've described how the river itself changed, but how about how you feel about it?
P: Yeah, I'd say having an animal who I walk along, we take him on walks through several parts of the James definitely makes me, because he jumps in and I want to make sure obviously that it's sanitary enough for him to get in and get out and not have some bacterial disease or anything like that.
I: He corrodes.
P: His hair just stops falling off the next day or something like that.
I: $\quad$ Tell me more about how your feelings about the James River have changed with or without including your dog? Think more about your feelings. Because if you grew up near the James as a child and now you're an adult and you'll continue in that path, tell me how did your feelings change instantaneously when you moved back or have they been moving along? Tell me the story of you and the James.
P: I think I took it for granted as a kid. As a kid you just live free and a bit wild and try to have fun. But when I came back not having a river, it definitely made me appreciate it. I took my time and went to certain aspects near the river off of Canal Street here that I typically didn't do before just because it's real tranquil and I can just walk along and just the essence of it, the chillness of just a nice walk down the river. Re-ask your question just to get the actual question itself of what you were asking. From my youth to now, right?
I: Yes. And if you want to do a timeline, you can or not. I want to know how your feelings about the James have evolved over time and perhaps if there was a triggering event. I understand you moved away and then you moved back. And you also mentioned what you saw was different. But if you could tell me how your feelings changed over time, that would be great.
P: I'll speak more of when I got back because it was seeing trash. Trash is obviously the biggest thing that hurts me when I do go through to the river now. Coca-Cola bottles, bags of potato chips, just all kinds of stuff that's just starting to pollute the water system itself. And it's more us. I doubt it's something that's coming down river. I think it's just people who are walking along and just throwing it, discarding it or whatever it is and it pisses me off. We have to take care of what's ours in order for it to last as long as we want it to. It's like anything else in life, you have to take care of it.
I: $\quad$ As you think about the James River some more, tell me more about your feelings. I want to find out if it was a whamo bammo event. Was it the first time you saw the Coca-Cola bottle or did it happen the more you saw Coca-Cola?
P: I have a house in Reedville as well, which is Chesapeake Bay itself. And the wham bam moment for me didn't really happen for the James. It happened in Reedville. There was one day it was a bad storm and we live... From my property, you can look directly in front and see Tangier Island. And a lot of the cruise ships and everything come through. But one time, I don't know if it was the cruise ships themselves or anything dumping, it's a thing that they actually dump off.
$\mathrm{I}: \quad$ What do you mean it's a thing?
P: There's just trash coming onto my beach basically and it's not just a little trash. It took probably a week just to clean up all of it.
I: $\quad$ No.
P: That was probably my wham bam moment. That happened maybe three years ago.
I: To repeat, you grew up along the James, you didn't care because it was there. Then you moved to Arizona where you \{inaudible] the water, then you came back, noticed that there was trash in the water. And then when you saw the cruise ship, that hit it.
P: Correct. That definitely woke me up about taking care of our waterways and our water systems in Virginia. And I'm being selfish because yes, I'm saying Virginia because that's where I live. But if it starts in Virginia and it's happening in Virginia, it's probably going to happen everywhere else.
I: Have you done anything? I'm an old lady so I think I can tell everybody what to do. When I see people in that when their cars are running, I say, "Excuse me, if you're waiting for a long time, could you turn that off?" Have you ever said anything to anybody or done anything? Have you volunteered or anything because of this?
P: If I see it in front of me, I'll say something, but for the most part I haven't volunteered. I've done the before ocean, those wristbands, things like that. If that's considered donating, then yes. But for the most part I like to just do my own. If I can take care of my land and my property and try to take care of mine, I hope everyone else can do the same. And therefore it shouldn't be at least a global issue, let's put it that way.
I: When you walk your wild animal, do you pick up trash in addition to what you're-

## Interview 2: Jamie; October 24, 2022

P: I do, yeah. If I see.
I: You do stuff.
P: Yeah.
I: What else do you do without telling me? You pick up after others.
P: I do that. I obviously make sure I can serve any water that I'm talking more household rather than outside. But I pick up myself. Others, if I see it, anything around my property, if I see it, someone doing it, I'll say something. Again, I told you about at least the little efforts of giving the charity as I can.
I: $\quad$ Those are the gifts I give my son-in-law, by the way, every gift, every event I add another $\$ 10$ a month.
P: Okay.
I: Anyway, go ahead.
P: No, I think that's about it. I think that there's not really much I can add to that.
I: The James causes upset of the natural environment. Tell me about your concerns. You've touched upon it, but tell me about your concerns about the environment.
P: I've been reading a lot about forever chemicals. Those are everywhere. Those are even in the James. Those are in the James, those are in our drinking water, those are in us.
I: Those are in us.
P: And those are never going away. And that's more from just repeated abuse from big corporations from sixties to now or probably even before that. But that really woke me up too. I have bottled water in my house or delivered five jug gallons just in case if I'm drinking it, I wanted to make sure it's healthy for me, my wife, everyone else here in my family.
I: You're doubly concerned about the environment. You're concerned about it not getting ruined and you're also concerned for health reasons.
P: Correct.
I: Does your dog drink filtered water?
P: $\quad$ Sometimes. I can't say always. I really can't. If we're out and about, he's going to have to have what it is but if he's at home comfortable, we'll give him water from our cooler.
I: Take me back.
P: My dog was diagnosed with cancer about a year ago.
I: Oh sweetie, I'm sorry.
P: It's okay. We got him surgery and then he's doing a lot better, but he's just older anyway, he's 13 now. Red lab. He's getting up to the age but could it be the water? I don't know. You never know. You really don't know what it could be.
I: There are two events then that hit you about the water. There's illness of your wild animal and then there's the day you saw...
P: $\quad$ The mess at the bay.
I: Do you remember the name of the cruise ship?
P: I want to say The Pride comes in through the Chesapeake, into Baltimore.
I: Wow. And what town were you in?
P: Reedville.
I: Take me back to that day when you first saw it, recognize what was happening. Tell me what you said to yourself. Tell me what you said to others. Did you come back and report it to your wife or then girlfriend or others?
P: We were there as a group. We all pretty much saw it. The water gets discolored when a dump happens and it's all kinds of stuff. It's from waste to anything that probably goes into a toilet. The paper, a bottle or anything. It's just a whole mess. Wasted food even. And we have some wildlife there that's pretty unique. Dolphins come in once in a while. Certain species of fish. But we all talk to each other amongst ourselves and we were just shocked that it was even... The fact they did it so close to where residents were actually living and being. In the middle of the ocean, I understand. If you need to dump something, I understand.
I: $\quad$ Not even.
P: But they have to jump in eventually. If not, it's just going to be poop and crap everywhere overflowing in the boats. I worked in finance, it's a business, I understand business so I do understand that aspect. But does it have to happen at the damage of our surrounding areas? Of course not. There has to be a better way. More definitely not cheaper way, but a more humane, environmentally friendly way.

## Interview 2: Jamie; October 24, 2022

I: I'm sorry, I'm looking back and forth at my questions.
P: You're fine.
I: I'm sorry.
P: You're fine.
I: Here's the deal, this organization is trying to find out whether or not water access affects how you feel about the water. The hypotheses being that the more access you have to the water, the more you're going to care about the water. True false or maybe?
P: I'd say true. I say that's very high correlation.
I: Keep talking.
P: If someone who hasn't been around water, is near water, hasn't had the personal connection to it, they're not going to be as dedicated, involved or even caring as to what happens to that, to the water. Someone who is surrounded by daily or whatever more regularly, they're obviously going to care more because they see it more and they'll be able to almost appreciate it more.
I: Riddle me this, way back when you were in Arizona, how much were you different from people who didn't have access to fresh water the way that you did in the James? And then take me forward if you can, assuming that you're going to have even more and more access to water that's not just the James. If more water around you was cleaner, tell me about the span about how people who are close to the river and how people who have more and more access to the river might be through your viewpoint.
P: It's money, it's financial. The real estate prices of something near the coast is obviously going to be more than something in inner city. The more opportunities you have to own a boat to own things, water crafts it all requires money. It's all capital thing. To me that'd be the easiest answer is just money.
$\mathrm{I}: \quad$ Did you notice that you felt differently about the water than people in Arizona?
P: I think they honestly... That's a good question. There are a few manmade lakes in Arizona, but not... Honestly, I didn't even really go. I don't know if that's because of the heat or because maybe I didn't have at the time the opportunities to have a boat or because there's nothing really built around the waters there. The small little man-made lakes. You got to have a boat, you got to have a pontoon or something like that. Unless you had a buddy or a friend who had it, I was there for five years and I can tell you I think I went maybe one time.
I: There are three reasons that you care about the environment. There's for its continued existence, a healthy planet, then your own personal health and the health of your wife and your wild animal and you're telling me also that the environment, if healthy will generate money and if unhealthy will cause loss.
P: That sounds about right.
I: Let me go back to my questions and I'm going to read a moment. Just checking. There's nothing that you've done differently because when I scratched the surface that you do pick up things as you pick up after your dog. Is there anything else that you do differently? Either what you purchased for ocean, which helps clean trash out of the ocean. Is there anything that you do even verbally? What has changed in you because of that pivotal event of the cruise ship?
P: Definitely I talk about it more. I have more conversations about it than keeping silent because I did witness it. Had someone not witnessed something, some travesty like that, they wouldn't be able to speak up. Where if someone brings up something about an oil spill or something damaging the environment, I always make sure to bring up that particular point where I saw that happen personally. It did, yes. It made me be more verbal having witnessed it rather than a lot of people aren't able to witness things all the time.
I: Tell me the tone and tenor and not by name obviously, but tell me who's around you in those conversations.
P: Just friends. Mainly friends. Friends and family. But always shocked. It's always a shocked tone because, even now, I still can't believe it. I still can't believe that we witnessed it in all the just poop and debris and everything which is coming on our shores. And we have family members who have kids and the kids are trying to swim and it's just coming up with the wave. It was real crazy experience for me but that's when I knew it's definitely an issue. I'm sure if they do it in the Chesapeake, in the town of Reedville, I can only imagine going up into Baltimore or Potomac, that whole area. I can imagine what that's like.
I: Because cops are busy there. Have you done anything or have you said anything at work because of this trash dump that you saw?
P: I work from home so I run... I know. COVID ruined it for everyone.
I: Wait a minute. Have you addressed anything... Let's see. In your professional life, have you addressed your environmental event?
P: l've not.
$\mathrm{I}: \quad$ You haven't mentioned that to anybody?

## Interview 2: Jamie; October 24, 2022

P: $\quad$ Not in a professional standpoint, no ma'am.
I: You can call me Kathy, please don't call me ma'am.
P: I understand.
I: Just out of curiosity, did your love of nature start here in Virginia and then did your love of nature continue with you out in Arizona even as a poor struggling student? What did you do out in Arizona that had connections with nature?
P: Arizona's beautiful. I don't know if you've ever been.
I: I have.
P: That's more above ground. Virginia's more below. The beauty I love here is water and the sense of water itself. Where in Arizona it's above ground. It's the Red Rocks of Sedona or San Francisco Peaks of Flagstaff. It's more the scenery of the mountains is beautiful.
I: Especially at five o'clock.
P: The sunsets? It's beautiful.
I: I have to ask the last question here. Let's sum up. Our client manages parks and creates access points to water. Going back to that theory, the more you have access, the more you care. I think that giving people access to the water will get them to care more about it. Can you tell me more about how you think that there's a strong correlation with that and what advice would you give to them? What is to work... Go ahead.
P: The first thing I would say is it would have to be public. You can't have private... All these private entrances to waterways. A lot of it in Reedville is all mainly private. If you have your own boat. A lot around my area is all private. You're cutting off individuals the opportunity to take advantage of something that should be free.
I: Wait a minute. Do you think that cruise ship dumped in a private area thinking that they could get away with it?
P: I don't know. I wouldn't dare to think of what Carnival would be thinking right now because they all fly under a Panamanian flag, which their laws don't apply here in the United States but it's still a US company. Makes no sense. It's a weird thing.
I: I'm going to read the question again because I think I interrupted you last time. Our client manages parks and creates access points to water. They think that giving more people access to water will make people care more about it. You mentioned that you think it should be public, but you also mentioned that finance was part of the reason that the environment was important. Tell me both about what the client might consider in public access and tell me what the client might consider in private or paperwork economy enhancing access.
P: I guess economy enhance... If it's public, more people would have access to it. Lower privilege, lower income. I think more of the masses would come from that aspect if it's public. Private obviously would, if it's a nonprofit, you need someone to pay for it. That's just what it is. The private part would be you got to build around we call it the watering hole. Whatever the access point is, you got to build around it. And sadly enough, real estate is one of the biggest ways to increase an area. It's getting people with money into the private areas would obviously help the cause.
I: There are notions of having events or little pavilions.
P: That works too. Of course.
I: What was I going to ask you? Oh, can we extend this? And the more people have access to the water, the more they will care about the water. Can you extend that to the more people have access to water and care about it, the more they'll care about the larger environment?
P: Yeah.
I: Tell me how that works.
P: Because once you get to experience, I can imagine... I'm trying to think. I'm only thinking of my area here, so my apologies, but there's not a lot of kids who have the opportunity. Even me growing up, my parents weren't wealthy, I got to see a lot of pools and community centers and things like that, which I'm still a fan of now because of my experience as a kid. I can imagine if that's the same concept to where if you get someone to a public access point where they're able to and just enjoy beach setting and possibly even just ride a boat. I can imagine how many people in the inner cities haven't even ridden a boat or haven't been on a boat. Just seeing the beauty would obviously have them then wanting to themselves want to be part of that boat ownership. And obviously once you care about owning a boat in water, you're going to care about the water itself. Because then you're going to start fishing, all these things multiply. That's a tough question. A very tough question.
I: Because I was just thinking of the forever chemicals. Anyway, thank you very much for your time young man. You'll get sometime tonight a little link to a $\$ 75$ gift card. Thank you so much for your participation.

Interview 2: Jamie; October 24, 2022
P: Of course. Thank you. Thanks for having me. You have a good night.
I: You too.
P: Bye Kathy.
I: Bye Jamie.
[END]

Interviewer: Oh, sorry. That's the cue that we are recording. Parkville, Maryland, you said?
Participant: Yes. I live with a roommate, and there's a cat and a turtle as well.
I: Oh, cute, a turtle. All right. Nice. Okay. What do you like to do for fun?
P: I play basketball. I like to kayak. I like to hike, read.
I: Kayak, basketball, hike, and read. That's a lot. That's nice. That's pretty awesome. So, where do you go kayaking?
P: I mean, I go all around the state of Maryland. I go a lot in Baltimore County like Middle River, Dundalk, areas like that.
I: What's nearby you? What's the closest one to you?
P: Probably Middle River or something like that, yeah.
I: Okay. We are going to be talking about the outdoors, which is what this study is about. We're interested in understanding how people's ideas change throughout their life about the outdoors, particularly when it comes to water near where you live. We're not talking about the ocean. Everybody loves the beach. We all know that we love going to Ocean City, but I want to concentrate particularly on what you call Middle River. What was the other one?
P: Lake Dundalk.
I: Lake Dundalk, right. Okay. Areas that are close to you that you can access easily that you spend time at, either doing kayaking, or maybe just having a little picnic, or just walking, hiking near bodies of water that are close to you that are not the ocean. How does your attitudes and feelings about the environment evolved through the course of your life? I know that sounds like a very deep question, but we're going to break those down into nuggets in the questions that I have for you. And then, what brought that change? Did you have an epiphany? Was it something that your parents did? What were you involved in outdoor clubs as a child? We want to know when that happened for you. The changes in attitude could be gradual. It could be sudden. Maybe you witnessed or saw something that was really devastating in the environment. You say, "You know what? I'm going to be really active in this." Or was it something that just... You've been around water all your life and this is what you do, essentially. So, let's explore that a little bit. Think about what I said and kind of formulate an answer for it. Was there a gradual change or was it a sudden thing that you got into it?
P: I think maybe through kayaking is what made me more aware of the water. Before I did that, I don't think I really interacted with the local water at all, and I didn't really even consider it.
I: So, having access, let's say... Do you own a kayak or do you rent it?
P: I own a kayak. Yeah.
I: Okay. So, when you started kayaking, was it something that you went down to? I don't know where you... The kayak store and you bought the kayak. Or did you rent them prior to owning one?
P: Yeah, I rented them to begin with. Yeah.
I: Okay. Where did you start that?
P: I mean, I guess I started kayaking in Harford County.
I: Okay. Okay. How long ago was that?
P: Probably about 10 years ago.
I: Okay. So, not so recent, but I'm assuming your adult life.
P: Yeah.
I: Yeah. Okay. Where did the evolution take place about starting to kayak? Were you in a park one day or near a body of water and saw some people doing it and said, "You know what? That looks like kind of fun. I think I'm going to start"? Or was it someone or a group? What motivated you to start?
P: The first time I kayaked, I just signed up for a nature center. They had a guided tour, and I participated in other types of activities at that organization, so I just thought, "Oh, this is something new to try. I'll try it."
I: Okay. All right. So, the nature activity turned that... It was like a nature reserve? Where was it?
P: It was Anita Leight Estuary Center in Abingdon, I think it is.
I: Okay. Prior to that, you didn't have any experience with being in the water at all?
P: No.
I: Okay.
P: I mean, not going in any way. No.

I: Okay. What do you feel are the benefits of kayaking? I'm looking for a full gamut. There's obviously the physical, but how does it make you feel? What are the feelings that you get when you're on the water kayaking?
P: I think it's really peaceful. Especially sometimes when I'm kayaking alone, it feels like I'm the only person out there in small creeks or whatever, yet to me, it's more relaxing than an exercise. I don't necessarily see it primarily as a form of exercise, more something that's peaceful and relaxing. Yeah. I mean, a lot of times like I said, it's nice. I mean, I enjoy parts of it that I go alone, but I also kayak in a group too, so that's fun. I guess the camaraderie of the group, as a physical activity, it seems like it has a broad spectrum of people who can do it, so I kayak with people in their 70s and 80s. So, that's maybe different, than basketball or something like that.
I: We have to have some type of athletic aptitude. Right.
P: Yeah. So, it seems kind of universally accessible. Yeah.
I: Okay. When you first started kayaking, did you take classes? Are they kayak classes or kayak training?
P: I mean, not immediately. As I got more into it, I took some training. Yeah.
I: Okay. Was that at the Estuary, that nature center?
P: $\quad$ No, not really. I remember I took a class through the Community College of Baltimore County, and I mean, I took a couple of other classes. I can't remember what they were through. I think maybe just places that did that specifically.
$\mathrm{I}: \quad$ So, they'll do tours together or how?
P: I mean, there are places that are just dedicated to kayak training. Cross Currents is a place. I mean, basically, all they do is training.
I: Okay. Okay. You mentioned something earlier that you started caring about the condition of the water after kayaking. How about before kayaking? What did you think about, let's say, the quality of water systems in your area? Were you thinking about that before?
P: $\quad$ Not really. I mean, before kayaking, I guess the only waterway in the area that I was kind of familiar with was the Inner Harbor, so I don't know. I didn't really ever think of it as a place to go into or that you would be in, kind of just something that was there before kayaking.
I: Okay. How much do you care now about the condition of the natural environment around you, especially the water?
P: Yeah. I mean, I definitely care more about the water because I'm in the water kayaking, so I mean, it's important to me that it's-
I: How motivating is it, I don't know, for you to... Okay. What we're looking for is to find the... Okay. You had access to the water. You weren't really thinking about the condition of the water prior to that, but after being in the water, you care about the quality and keeping the environment of the water clean, so that it's safe to go in, but also keeping the environment for others that are also participating nearby. What concerns... No, let me rephrase this. Does it motivate you, not just kayaking but caring? Is that motivating?
P: I mean, are you asking does kayaking motivate me to do something else for the water or-
I: Yeah.
P: I mean, I don't really know what I can do individually for the water. I mean, I do care about the conditions of the water, and it's disappointing when there's an area I go to and it's dirty or it has a lot of trash around it or something, but I mean, I don't really know what I would do to help the water, I guess.
I: Right. Right. Okay. That's fine. Going back to that turning point, can you think about that point after, "Okay, this looks like fun. I'm going to start kayaking"? Was there a moment when you really, like you said... Did it happen? Did your moment happen of caring about what happens to the water? Did it happen when you saw that patch of garbage? Did it happen when you were in that peaceful Zen moment by yourself kayaking through a pretty turn in the river? I just want to get a feel of what was that moment for you if it ever did, or was it something that happened gradually?
P: I think it was more something that happened gradually. Yeah. Yeah. I don't recall a specific aha moment or something.
I: Right. Okay. Okay. So, it happened gradually. So, the more access you had, the more you started caring about the quality of the water?
P: Yes.
I: Okay. Okay. All right. Can you specify any attitudes that have changed gradually then? Tell me what attitudes kind of, "This is the way I used to feel before, and this is the way that I feel now." Are there any moments like that?

P: I guess. I mean, before I kayaked, I didn't interact with the local waterways, so they were just something that kind of existed. I mean, it didn't really matter how dirty it was or trash-filled because it wasn't something I ever thought about, "I'm going to get in that or I'm going to use that for recreation." So, it was just maybe a pile of rocks or something, just something that kind of existed. I mean, since I started using the waterways, I mean, I want them to be decent. I don't want them to be disgusting if I touch the water or I don't want trash around it or in it because that's just not enjoyable, so l'd like it to be in good condition. I mean, there are some areas I'll kayak in and it'll be so icky. Because you get a little wet, your hands get wet definitely, and I kind of feel like, "Oh, I don't want to scratch my nose or something because l've touched this water, and it just seems too disgusting to get on me or something like that." Yeah.
I: Yeah. The physical exposure of that contamination or pollution obviously has health implications. So, you noticed that more after being in the water. Any emotional or psychological attitudes changed? I mean, I recognize the physical harm that can happen, that could occur. Any emotional or psychological, not so much aha moments but "Wow, the level of calm is more present in me now that I am in this activity," versus, "Before I wasn't really thinking about it"?
P: Yeah. I mean, I guess there's an emotional response too, if I go in an area and it looks oily in the water or that there's lots of trash floating in it. I kind of go, "This is sad. This is kind of disappointing."
$\mathrm{I}: \quad$ So, there's also the sadness of seeing that. Is there any anger or just like, "What the heck"?
P: Because I don't really know where it comes from, so I guess I don't really feel anger because I don't know if it just gets in there, or if someone's maliciously doing it or carelessly doing it, or if someone's trash bag just happened to blow away. So, I don't know.
I: Okay. Okay. So, the pinpoint, that turning point for you was definitely spending more time in the water. This program that we're talking about is designed. Well, it's not a company. It's an organization that manages parks around the country, but particularly in the Chesapeake Bay area. Sorry. Not around the country. The Chesapeake Bay area. And their goal is to give more access to water in different places in the Chesapeake Bay region, and they feel that giving people more access to water will help them or would get them to care more about it. How true is that for you?
$\mathbf{P}: \quad$ Yeah. I think that's extremely true for me. Yeah.
$\mathrm{I}: \quad$ Okay. Do you think it would be true for others?
P: Yes. Yeah. Yeah.
I: Okay. How about, is there anything that you could think of where... I know you said that you felt like, "I'm just one person. I can't clean up everything or clean up all this stuff because I don't know where it comes from. I don't know if this was intentional or unintentional." Is there anything that you would want to do to help the environment? Is there anything that you're doing in your personal life, for example, in your home life, that you think helps the water?
P: I mean...
$\mathrm{I}: \quad$ Or is there anything that you want to do that you're not doing right now?
P: Definitely, if there was coordinated things that needed volunteers, I would probably do something like that. I mean, I've done park cleanups before and I volunteer in a lot of different capacities, so I mean, if there was a structure like this organization is putting on a water cleanup or something like this, I mean, yeah, I would seriously consider participating in that. Yeah.
I: Okay. A woman in another interview mentioned that she and her husband, depend on well water where they live, so around their home, they're very mindful about what goes into the ground. So any oils, anything that's either motor oil, cooking oil, they package it up and they make sure that they take that to a special recycling center for those kind of things, and it doesn't get into their water system, nor does it go into the general water system where they live. So, any household behavior changes that you're thinking about or that you're actually doing right now that impacts the quality of water?
P: I mean-
$\mathrm{I}: \quad$ Even recycling. Do you recycle? Do you-
P: Yeah, I recycle and I don't litter. I mean, I make sure I throw trash away in a trash receptacle. Yeah. I'll just close the door real quick.
I: Okay. Yeah, sure.
P: Okay. Yeah.
I: Okay. Okay. After you started kayaking, what has changed in terms of the experience that you have with water? Before you started kayaking, I'm assuming you could take a walk, and either maybe there's a basketball court nearby, close to the water. Did you think about the water before kayaking as much as you now do? Has the experience changed? Are you thinking more about the quality of the water now?

Interview 3: Jessica; October 23, 2022
P: Yes. Yes.
I: Okay. Okay. So, before, you didn't think too much about it. Now, you do. Okay. Is there anything else that you're doing different? Besides the kayaking as well, I mean, are there any other experiences that have changed because of... Any impressions have changed regarding the natural environment, and in particular, water? I mean, of course yes, you don't litter. You don't do it. I mean, anything else other than that?
P: I mean, I don't think there's anything otherwise, specifically that I do.
I: Okay. Okay.
P: I mean, not that I can think of.
I: Okay. So, is there anything else? Let's say, for example, if you were in charge of creating a campaign around this premise of giving people more access to water in neighborhoods, in cities, in counties, and it could be a river, a lake, stream area, if you give people more access to those areas, they will eventually start caring for them which you said was true for you, how do we communicate that to the general public? What do you think are ideas or things that we could say to help people get to that point?
P: I mean, I guess for me, I don't necessarily know what causes the water to get dirty like why some water is oily or murky, and other water is clear. So, I mean, I don't know if that's something that each individual can contribute to or if it's just, I don't know, factories or something like that. So, I think that when you ask me if there's anything I do to help the water, well, I don't even know what the calls of these different things are.
I: $\quad$ Right. For example, let me... This will be the last thing. Let me rephrase it then. How can we get more people to care about water? How we get them to care more is by giving them more access to those premises, so what messaging, what are things that we need to kind of say to people? What are the things that would motivate and give more people access?
P: I mean, I think... Sorry.
I: No, go ahead. Go ahead.
P: I mean, I think, like I said, when I first started kayaking, it was through a nature center, so I think maybe having structured programs because someone's probably not just going to wake up one day and say, "Hey, I'm going to go buy a kayak, or I'm going to go buy a bunch of fishing rods or something like that." But maybe if someone put on a program like introduction to this or guided with this, people would do it who had never done it before, and then get involved in that hobby or whatever.
I: Right. So, something that's a structured program, educational, as well as recreational.
P: Right.
I: Right. Okay. All right. Well, that is all our time. Thank you so very much. You will get a $\$ 75$ gift card at or around 7:00 PM today.
P: Okay. All right. Thanks a lot.
$\mathrm{I}: \quad$ Thank you so very much.
P: Okay.
I: Okay. Bye. Bye.

Interviewer: We do record the interviews, which means that Zoom is going to automatically transcribe what we say today, as well, which is awesome because we're not going to be taking too many literal notes. But I do want to guarantee you that this interview is anonymous and confidential. We will not use your name or your likeness or anything that identifies you in the report. What we will report is what you do say, but we won't say, "Justin said." We'll say, "A respondent in group three or session one, session two said this." So that always is good to put up front, as well. Let you know you can speak freely. You can even use words that normally aren't used. But we do use them. If you have to express yourself ... Yeah. Because when people express themselves, sometimes they say a word that sometimes they wouldn't say around polite company. Well, I am your friend today, Justin. You can talk freely and comfortable around me.

## Participant: Unfiltered.

I: Cool, cool. We're all cool. Anyways. All right. So today's topic is going to be on outdoor spaces. Now what that means is we want to know what your attitudes and feelings are towards outdoor places, especially those around water. Not the ocean, not the beach, but rivers, lakes, and streams around your area. Has your perception or attitude changed through the course of your life? Maybe you moved or whatever event happened that made you, I guess, either care or not care is what I want to know. And then that's it. That's it. That's all. Do you have any questions for me before we begin?
P: $\quad$ No. I guess I'll just go with the flow.
I: Go with the flow. And if you do have a question, just stop and ask me anytime. Okay? All right. The first thing we want to do is find out where you live, city, state, etc. or neighborhood. Who do you live with, pets included? And then what do you like to do for your leisure activities? What do you do for fun, whether it be something that you plan on with a lot of time in advance or something that you just decide to do like, "Hey, I'm going to do this this afternoon"? So take it away, Justin.
P: Okay. I live in Richmond, Virginia. I live in the downtown area, so traffic, all that good stuff.
I: All that good stuff.
P: I used to live in Baltimore, Maryland. I went to school at [inaudible 00:03:11] University, so I relocated back to Richmond about four, five years ago. So I grew up in Richmond, went to college, graduated, lived in the city, then eventually moved back. [inaudible 00:03:23] still went back and forth, but ... As far as everything I got going on, I'm the high school basketball coach.
I: Oh, wonderful.
P: I coach varsity. I'm assistant varsity basketball coach. I am a fitness instructor at our local gym. It's called American Family, but it's only in the state of Virginia. So American Family. So I teach classes, all type of different class sizes.
I: So you're doing all that stuff. Right. Okay.
P: Yeah. I volunteer. There's a couple, I guess, non-profit organizations for disabled kids and under ... I wouldn't say underprivileged, but I'd say disabled kids. Actually, I did that last night. I volunteer maybe four times a year. They have a ... It's kind of like a wine auction.
I: Ooh, nice. Yes.
P: I volunteer at a wine auction, but I was at a dessert station. [inaudible 00:04:22]
I: That's a good place to volunteer. Sign me up, Justin.
P: I [inaudible 00:04:28] when I was younger, and I guess as I got older, I wanted to get back into that volunteering. Three or four times a year, I can set aside a couple hours for that. And then I'm a financial analyst. That's my-
I: Wait. You do a lot, too. So you got a lot of things going on. But that's wonderful. That sounds like a very busy, active life. Let's say-
P: And I live with my girlfriend, too.
I: $\quad$ Free time. What do you do with ... What did you say?
P: $\quad$ And I live with my girlfriend. I had roommates and stuff in college. [inaudible 00:04:59]
I: Yeah. And then what about your free time? I mean, you volunteer and stuff, but let's say Justin wants to do something. He has some time off this afternoon. What do you do?
P: For fun, I usually ... I watch sports. I watch basketball. I watch football. But I try to cook new meals once a month, so I might look at Tasty. You ever heard of Tasty?
I: Yeah, yeah.
P: Because they have new recipes. I look for recipes to cook. Actually, I write music. So I write songs in my free time, too. I'm trying to think what else I do. Because I teach [inaudible 00:05:46] classes. I've got a brand I'm trying to build, a fitness brand. It's called Make You Look Good. That's my brand.

## Interview 4: Justin; October 23, 2022

I: Oh, that's nice. That's nice.
P: So I'm trying to, in my free time ... I haven't done much recently, though, but I try to bid out ... I'm working on trying to make some merch. But that's stuff I do in my free time. I'm not trying to make a lot of money or-
I: How about any outdoor activities that you and your girlfriend maybe would like to do?
P: Well, if I'm outdoors, then a buddy of mine ... His name's Josh. We go hiking. He's the guy that gets me really outdoors. But-
I: He's your outdoor guy, you called him.
P: Yeah. He likes swimming. He's like, "Let's do this." I mean, because our biggest park here is called Belle Isle. That's our downtown ... You can go kayaking on the water, skip rocks, all that good stuff.
I: Do you do that with your outdoor guy and your girlfriend or just your outdoor guy?
P: On the water, I've done it a few times. I prefer hiking. Either we do a big group with him and his friends or whatever ... So I kind of mix it up. So we'll be hiking at Dorey Park. We got a couple parks out here we go to. But if I do a lot of outdoor things, it's probably-
I: Is that by the water, too? Do they have lakes, rivers, streams, that sort of thing happening in those parks?
P: Just the Belle Isle one. But the other ones, it's more actually-
I: It's just woods.
P: Just woods. Yeah, yeah. There's a peak at the top.
I: Okay. Okay. Wow. You are physically active professionally, as well as in your personal life, as well. I want to take you down an introspective way. In terms of now your attitudes towards nature and the natural environment, thinking about your childhood all the way up into now your adulthood, have any of your attitudes changed in terms of nature, especially nature around bodies of water? Any of that changed?
P: [inaudible 00:08:14] being a kid. I mean, a kid, you're probably just more like a ... You're not wanting to be around bugs and things like that. But as you get older, it seems like it's a peace of mind. It's like a weird thing. It creates happiness. Like going to the beach-
$\mathrm{I}: \quad$ It creates happiness?
P: Yeah. Going to the beach and being by the water... Because I used to live in Maryland, and I used to go to Ocean City a lot. And you obviously have Virginia Beach in Virginia. But it's something about being by the water that creates this little peacefulness of ... a calmness to you that you only get by the water. Definitely you appreciate it a lot more as you get older versus when you was a kid, it was more playful. But if I was feeling stressed or if I was ... I can go by the water. I can go for a nice walk by the water, and I can feel ... It's almost like a breath of fresh air will come back to me.
$\mathrm{I}: \quad$ It creates happiness.
P: Just by being by the water. Yeah.
I: Okay. Okay. So you appreciate more the emotional benefit of being by the water because, as you said, it creates happiness. Whereas when you were a child, it created happiness too, but it was more of the physicality of it and playfulness and the fun aspect, the entertainment of it. Okay. When was that moment that you realized that, that it created that happiness for you as an adult? Was there a specific moment that you realized like, "Oh, man. I should be caring more about the environment because this is making me happy and this has to do with me"? Did you have that inner conversation at any time?
P: Yeah. It was at an unhappy moment. I remember when I was in Maryland, I had graduated. I had my degree, and I was ready to find a job in my field. And I was having those day-to-day struggles, getting the email, "Hey, thank you for reaching out. But unfortunately, we decided to go another direction." It's like, "Dang. I'm educated. I got this stuff going on." And then you really saw having those times by yourself and then it's like ... And I can't say I was talking to people. I'm a guy. I keep it to myself. But I think I started going on more walks and going on these three or four-mile runs. And I'd stop by a lake or water and just kind of catch my breath. And you started just having these moments of, "Man, I feel better." But you're thinking it's just a nice little run, but then I guess having those moments... And I guess that particular moment of graduating college is when I really started having more time to myself and I started doing more walks and runs. And then I had a period when I noticed [inaudible 00:11:10]. And then I kind of tested that theory when I would go on vacation and I would go to a [inaudible 00:11:15] versus going to a Virginia Beach [inaudible $00: 11: 19]$. Even though the day it was it is, but then you go by the water and you get a chair, you sit for three or four hours by it, or you put your feet in the water and then you realize the difference. And it's like, "Okay. It is the water. It's not me just making it up." And I would say [inaudible 00:11:36]-
I: $\quad$ Right. So you tested it yourself. Wow. That's awesome. Not a lot of people can verbalize it as well as you did, so I appreciate you doing that. How much do you care about the conditions in your area in the natural environment? Or not? Maybe you haven't thought about it.

Interview 4: Justin; October 23, 2022
P: Oh, no, no. I actually do care. If you was around me, I'm always the person trying to clean up or trying to organize things. So if I see a bottle, I'm going to put in the trashcan. Even though it's not mine. I'm naturally the person who is going to straighten up after other people. But I guess overall, I guess the environment ... A lot of it is based on where you live at. Obviously, if I'm in more of a lower economic area, I'm going to see more trash and things like that. But I think I just try to play my part, I guess. If I can help, if I can clean up, if I see an older lady struggling ... Anything I can do that I could feel like I can make an impact, then I try to make that impact. And I don't really need a lot for it. I don't need a reward. Just a thank you is all I need, and I think I'll be more appreciative of ... Because I enjoy ... You see I do a lot of things, but I enjoy it. If I didn't enjoy it, if I wasn't happy, I wouldn't do all those things and I wouldn't be happy doing it. I guess a number on a scale of 1 to 10 , maybe an 8 that I want to make sure I do what I can.
I: Does it motivate you to ... Does the natural environment motivate you? Because you sound like you're an outdoor guy. Sports, as well as professional, obviously, and just your little happy spot where you want to create that happiness. How concerned are you about the natural environment?
P: I love to see communities develop. Richmond is not what it was when I was here growing up. When I came back, it was more buildings, more structures. VCU is a big college here. It was more VCU buildings. I love to see the growth. I'm not a direct person that is a part of that process, but it's cool to see the city grow. And now Richmond is more up and coming now. The population is growing, so it's kind of cool to see that ... [inaudible 00:14:13] adult now, but yeah, I mean ... I don't know of an exact answer to give one there, but it seems like I am appreciative. But seeing the city grow feels good, so it's not like-
I: So now seeing it grow, there's obviously going to be more impact on the natural environment. How is that working out in Richmond right now? Is the city's natural spaces declining? Or is it improving? Are you aware of anything that are happening in the area? Or not? Maybe you're not aware.
P: Yeah. I would say it's something I'm not aware because [inaudible 00:15:01]. A lot of things are being torn down to build new properties. I think housing is interesting. I think housing has some improvements that could be made. We had some ... I don't know what you call it ... Section 8 areas, but they've been tearing them all down and making it into a park. So that's less housing that they got rid of-
$\mathrm{I}: \quad$ That's gentrification.
P: That's right. Gentrification. That was kind of interesting to see because these places have been there for forever. Just all of a sudden, they're giving a 60-day notice that, "Hey, you got to be out by a certain time."
$\mathrm{I}: \quad$ That's terrible.
P: And just getting them gone. So it's interesting to see that. I've seen that one time in one area. I guess a project area. So it's been interesting to see it. You start to see malls being obsolete now. We've got a mall that's turning into a recreation center now. But I guess we've always ... The push to bring more people-
$\mathrm{I}: \quad$ So there's a lot happening, but the price of growth is very dire for people of less income is what I'm hearing, as well. Okay. Now let's go to the natural environment. What's the impact on the natural environment? Have you seen any improvements or decline in that respect in terms of nature around you? You talked about the trees being knocked down. Are there more places to enjoy outdoors? Are there less places to enjoy outdoors? What's it like? Especially the ones near water.
P: Yes. I do think we do a great job of building up the areas we do have by water. I don't know any initiatives, but it seems like a lot of ... Because I live downtown. A lot of apartment buildings are getting built along the water now when it used to be pretty much just nothing. Now it's turning into apartment complexes. So it's interesting to see that ... Maybe it's easier for construction, but it seems like ... I don't think it's a negative impact, though. I'm saying neutral or not negative. I assume somebody has a vision in mind, I guess, of a positive upward projection, maybe two, three, five years from now. But I think it is a push to build areas more populated by the water.
I: Okay. Okay. And what's the effect of that peace and calm? You told me that you feel peaceful and calm and you create that happiness? What's the after effect of that after you leave? Are you bringing that care or that feeling back home? And are you doing things to ... Are you recycling? Do you not pour grease down the drain? Little things like that. Are those things happening in your household right now? Or do you need more information to get those things happening in your household?
P: Any new information is always welcome. I can say I don't know everything. But I would definitely say it's motivation, though. It's motivation.
I: $\quad$ Are you and your girlfriend recycling?
P: Yes, we have a bin that we ... My apartment complex, they make it easy. They've got the bins outside, so it's got to be in separate bags. Every once in a while, I may have something that's ... And [inaudible 00:18:39]. If I had something that is so dirty, I would probably throw it in the trash. Or if it had a bad smell, I wouldn't put that with the recycling. But the water bottles, the easy things ... But I can see my apartment makes it easy for me, so-

## Interview 4: Justin; October 23, 2022

I: So it helps when the apartment complexes-
P: Because that's [inaudible 00:18:59].
I: Yeah. Because there's some of them that just don't recycle, and it's ... I've done a lot of interviews with people that say, "You know what? I would recycle more if my apartment complex made it easier for us. Otherwise, we have to take it ourselves and drive it somewhere. So what's the point if you have to waste gas to ...
P: Yeah. Extra you got to put into it.
I: Right, right. The extra effort. But whatever. Any effort, I guess, is good. Is there anything in your daily life that you're doing different with regards to caring for the environment? We talked about recycling. Are there any other things?
P: I guess at the present moment, probably no. At the present moment. Because I'm [inaudible 00:19:52]. Any special step or project, I'm probably not right now, if I'm being honest.
I: Because you're doing so many different things that you're not thinking about it. That's what I'm hearing. Yeah.
P: Yeah. That's it. That's it. Yeah.
I: Okay. Okay. Would you like to learn?
P: Yeah. Anything I don't know ... Go ahead.
I: No, no. Would you like to learn on how people can take daily steps in ... It doesn't necessarily mean signing up every week to clean up a dump in an area where there's a lot of dumping going on. I'm talking about daily steps in your everyday life as you go through your day, is that something you're interested in learning more about?
P: Yeah. Oh, go ahead. Sorry.
I: How do we get that information to you?
P: That's a good question, too. I would say definitely because I mean, I only do what I know. So if I know I go the right way, I don't know that I'm doing anything wrong. But if improvements, kind of introduce me like, "Hey, did you think about this?" And I'd be like, "Never thought about that." Then I can welcome it all. I check my emails every single day, so I'm a big advocate for email. Information to me, if it's emailed to me, I'm more likely to do it versus if you call me and leave me a voicemail or text me. It might get lost in the sauce, but I'm a big email person.
I: Okay. Let's just imagine the city of Richmond emails you. Would it be something that you open?
P: Yeah. Knowing me, I probably would. Yeah.
I: Okay. Okay. Well, the sponsor of this study is the National Park Service. They're a federal program that helps cities and states manage their green spaces, to a regular park to a neighborhood park to the water. What's the island that you called again?
P: Belle. Belle Isle.
I: Belle Island? They help Belle Island, whoever runs Belle Island to maintain ... to give access to people while maintaining the natural environment. So they have a theory, and I want you to help me understand how you feel about this. They have a theory that if people are given more access to the water, create more access points in cities and in towns to waterways ... It could be a trail or picnic area. If there's more of those spaces that are next to the water, people would care more about the water if they had more access to it. What do you think of that theory? How true is that?
P: It's an interesting theory. I guess I look at people who have their own business, and it still could be done the wrong way. Because say I had a catering business. I had a food truck and I can get spaces by the water. Who says I'm not going to put stuff in the water that shouldn't be in the water? Who says this-
I: And let me just say ... What I mean by access points, I'm talking about kayaking. You could rent a kayaking. It's a park where people go to run, to maybe have basketball courts and baseball fields.
P: Okay. I [inaudible 00:23:41].
I: As well as maybe hiking and trail, bike riding where people can picnic. How true is that? If there's more exposure to those spaces ... fishing-
P: Oh, definitely. Okay.
I: Do you think that people would care more about the quality and the condition of the water if they had more access to it in those kind of places?
P: Okay. When you say it that way, then yeah, $100 \%$. Because I feel like people wouldn't ... If they're having kids and you want to do something that'd be fun for the kids or the teenagers where you can't hang out too late, but you still want something you can do for fun, it gives you a safer place you can go hang out and be

## Interview 4: Justin; October 23, 2022

by the water. If you're by the water, you're not as concerned ... [inaudible 00:24:33] activities. A lot of things, you learn in life, the fundamentals. Sometimes I think in sports and team environments and working together, all that stuff comes together. And if you have the access in those safe places, I mean, that's 100\%.
I: When you had that moment after you graduated college, you said you had a shift in your attitude as far as ... Because you had more time to yourself. You didn't have so many things going on. You were able to think about, "Yeah, this is really ... Being by the water really helps me." Did your priorities change after you started running by the water?
P: Yeah. It might have been because the decisions I made, and once you realize that a lot of the decisions you make is actually ... You can realize certain things, and say, "Oh, no [inaudible 00:25:45]." You can have all those things when you get older. You had a moment like that ... I'm here because this is the life I created for myself. So having that moment of realization, you could say, "Okay." It could be a spiritual thing, too, you having that peace of mind and having that clear mind where you actively think, "Okay. If I go home and I can create a disciplined plan for myself, I can do this and that." So kind of help people clear your mind of just [inaudible 00:26:13]-
I: $\quad$ So running by the water created what effect for you?
P: I would say it freed my mind. Because you're running, you might think about your knees hurting a little bit. You might think about trying to catch your breath. So you can literally-
I: You said it frees your mind. That's interesting.
P: Yeah. Because literally, I'm just focusing on ... So no matter what my morning was, what I ate for breakfast, if I had a [inaudible 00:26:40], I'm focused on the run. I'm focused on trying to get to six miles. I'm focused on just that moment. And when I'm done, I'm looking around and I haven't gone back into that. Maybe I get in my car or maybe I look at my cell phone. I can be like, "Oh, I did X, Y, and Z." But for that moment, that 30 minutes or that hour, you can just clear your mind. And then maybe that helps you unlock some, "Oh, yeah, this is what I can do now."
I: $\quad$ So it's mental health is what you're saying.
P: Yeah, yeah, yeah. Definitely. Yeah.
I: $\quad$ So you've gotten the emotional, psychological benefit. Yes. Okay. All right. Well, we're at the 29 minutes in.
P: Are you timing me personally?
I: No, no. I'm looking at the time. Steve, do you have any last questions? Okay. He says he's good. Thank you so much, Justin.
P: Okay. Cool.
I: This is the end of the interview.
P: $\quad$ Hopefully I answered. I don't know if I did or not.
I: Oh, yes. You did. You were fantastic. Thank you so much for sharing a little bit of your Sunday with us. You will get, in about half an hour from now, a $\$ 75$ gift card so you and your girlfriend can spend it in any way you like. Have a good rest of your day.
P: Thanks. I appreciate it so much.
I: Okay. Thank you, Justin. Bye-bye.
P: You have a good one. Have a good one.
[END]

Interviewer: Oh, we're recording. Oh, by the way, we are recording. This is going to be anonymous and confidential, so we're not going to have your identity mixed in with what you say. What we will report is like, "A respondent from Sunday session said, blah, blah, blah." We're not going to reveal who you are, who participates in this study, so feel free to share your opinions as freely as you like.

## Participant: Okay.

I: Okay. So where do you live?
P: $\quad$ My name is Renae. Well, no names right?
I: Oh, you can say Renae. Yeah, that's fine. Okay. I mean, just because it's you and me, but we're not going to use your name in the report or your face.
P: $\quad$ Okay. I live in Maryland and I'm a mom of four and my kids ages range from two to 16.
I: Oh wow, okay.
P: Okay. I'm married, so there's the four children, my husband, no pets. We couldn't deal with pets with all the kids. And what do we do for fun? We like taking family trips. We do staycations, local trips. We do further away trips. The furthest we've been to recently was Florida.
I: Okay, good. And think about your local areas now. Where do you like to go? Even if you have a couple of hours in the afternoon that's free or you want to get your baby, the youngest is two, right?
P: Yeah.
I: So let's say you and the younger ones want to, So two and 16, are they? They're all living at home, I'm assuming. So you want them to burn some energy or something. Where do you go?
P: We do our local parks. Over the summer, we did quite a bit of, since we're talking about water, we did some beaches of course. We did the pool, we do the parks a lot. We do the library.
I: $\quad$ What city is it that you live in, in Maryland.
P: I'm in Anne Arundel County.
I: Okay. Anne Arundel County. So what are the names of some of the places that you visit that you have a couple hours, a nice afternoon, or that you want to spend by yourself or with the family?
P: We go to the Chesapeake Bay, the water. We've gone there before. We take advantage of this place called, well it's not that far, but St. Michael's is the neighboring town. We take advantage of their water sites as well. And I also take advantage of the local schools and take the kids to the playgrounds at the school.
I: Okay. Okay, great.
P: The whole purpose of the kids go into parks, it's like the burn off energy.
I: Right, yeah. And also, what do you get out of it when you are visiting, let's say a lake, a river, or a park area that's close by to a body of water? What do you get out of it? We know what's in it for them, what's in it for you?
P: I mean, it's relaxing and also I'm constantly on my phone. My kids are as well. And I find that when I'm by the water, I don't want to be by my phone. I mean, I am taking pictures, let's be clear, but I'm not scrolling the internet, social media type stuff. I'm enjoying nature and everything and everyone's outside boating and things like that. I'm enjoying the scene. So it's relaxing. And I'm trying to get my kids to go back to how I grew up. I grew up in a small town near water. And so I'm just getting them back to, I used to go to by the water every day.
I: $\quad$ So trying to minimize that screen time.
P: Oh, definitely. Because everyone in my household has a phone except for the baby.
I: $\quad$ And your baby probably get a phone soon.
P: Yeah.
I: Right. Okay. So when you grew up, you had access, you were outdoors and you were going to the water every day. And now those things have changed. What makes you want to go back to that?
P: I just remember the sense of adventure. You just get dressed, go outside with your stick literally, and your flip flops and you just go out by the water and you just never know what the day will bring. It might be swimming in the water, fishing, kayaking, It was always an adventure.
I: And so that sense of adventure is what you want your kids to also have?
P: Yeah, I want them to have a sense of adventure that's organic. Not through their video games or through their cartoons or movies. We do those things as well. But I let them burn energy and enjoy nature often on purpose. I purposely choose those types of outings.
I: Okay. And thinking about the closest place where there's a body of water, what would it be to you? Where's the closest one that the public can access?

## Interview 5: Renae; October 23, 2022

P: There's a park where my mom lives, it's like a community park. And we go out there and just, it's not like it's a lake, it's not anything big like a river, but it's just a lake and there's like a park and there's houses and kids just sit beside it and fish.
$\mathrm{I}: \quad$ Okay. What is it called? Do you know the name?
P: Oh, it's apartment complex. It's called Thomas Landing.
I: Okay. So then there you have the ability to walk and be near the body of water. Okay. And then how much do you care about the condition of the natural environment around you? Now you might not care at all, but some people, the more exposed that they are to nature may develop a sense of caring for it. That's the theory that our client, who's the National Park Service, is trying to kind of explore. Do people care more about it, about the natural environment if they're more exposed to it, does it happen automatically? Or is that something that gradually works into your life or feelings just kind of bubble up? What's it like for you?
P: I don't think I thought about it, the condition of the water when I was growing up. So I don't think about the trash or the quality of the water, the safety of the water when I was growing up, I didn't think about any of that stuff. But now that I'm an adult and my kids are going out into those spaces, I do care when I see lots of trash. I do care when I see the water's extremely murky or there's people doing things in the water, throwing things in there, I do care. Now I care to the extent of I'll pick up some trash here and there or in my mind, I'll mentally take a note of how bad things look. But I will say, I don't care enough to, haven't done much about it.

I: Okay. And why do you think that is?
P: It's such a great task.
I: $\quad$ So is it a great task, meaning it's too much?
P: Yeah, it's too much. I know when I'm signing up for my driver's license that or can oh, sign up to donate to the Chesapeake or local reservations. And I feel like that's doing my part a little bit. So I do sign up, but I haven't done anything actionable. Haven't joined any groups.
I: Any steps inside your household? Let's say for example, there's people that recycle, there's people that don't throw grease down the drain, they put it in a container. Any of those little steps. Because I mean it does seem great. Like, oh man, not one person can fix the environment. We all know that. But are there any small steps that you think that you could be making or that or you're currently making?
P: Yeah. I don't litter at all. I don't just throw food out or things out. I also, trying to think at home, don't take, I don't know if this counts, we don't take extremely long showers on purpose. I don't know if this... Long showers and I don't litter. And on the grease, I don't really cook with that much grease, but I do put it in another container and don't put it down a drain.
I: Right. Okay. Any recycling happening? Is that easy?
P: I don't recycle.
I: Okay. You don't recycle. Is it because you can't recycle or is it because it's just you don't have access to it happening there?
P: I don't recycle because I just need more guidance on it.
I: You need more guidance on it. Okay.
P: Wasn't a big thing in my household when you just got rid of trash.
I: You just threw everything away in the garbage bag. That was it. And what do you want to know to maybe help you get, what is it that you would need to help you get started on that?
P: I would need to know that it's actually helping. I would need to know to what extent, It would be great if it was a true community effort, a recycling times day in the community. Because I'm definitely, everybody's doing it, we have to do this type person. We don't have a recycling bins where I live and stuff like that. I don't know where, I don't even have a recycling container.
I: $\quad$ Right. So you definitely, the city or the county where you live needs to reach out and communicate, hey, these are the ways that you can recycle in order for you to maybe consider it for your home.
P: Yeah. It just needs to be more clear. Yeah.
I: Okay. Okay. All right. So let's go back outdoors. We were indoors now talking about the behavior indoors, now outdoors. What would motivate you then to care about, I mean, you already care and you said, but it's such a great task. It's really a big deal. What would motivate you to maybe take some action? For example, you have children in school. Do you hear anything happening in the schools? Any information that they send home for parents or that maybe those activities that the kids can be involved in that have to do with the environment?
P: My son had to do some community service for high school. And so that was one of the options on there. It was an option and it was one that we didn't choose, but it was an option. And then my seven year old's in

## Interview 5: Renae; October 23, 2022

second grade, so I haven't heard anything about that. And so I haven't heard anything through the schools. I go to the library a lot. I'm sure there's information there, but I haven't seen it directly or sought it out.
I: Okay. Okay. So let's talk about the way that being at the body of water makes you feel. You were talking about you felt peaceful, calm. Does that peace and calm translate into some other behavior or some other attitude that you bring back with you home? So after being there, does that level of calm or peace that you feel by being near the water, is there any effect afterwards?
P: I mean, I try to recreate that space, that calm space. Right now I have a balcony project. I think it's motivated by my visits to the water. I'm trying to make my little balcony oasis because that's how I feel when I'm at the water.
I: Oh good. So you're building that, you're trying to bring the nature in into your home and then if you're in a balcony and you're spending time outdoors as well.
P: Yeah
I: In a way. Okay. Anything else?
P: I just take pictures and I revisit those pictures often.
I: Okay. And then was there an experience in your life, even as a child that changed the way you feel about the environment? We know the physical impacts, you don't want to go in dirty water, you're concerned about the health implication. But was there a moment when you, that you can describe that impacted the way you feel?
P: $\quad$ About the environment?
$\mathrm{I}: \quad$ Or being outdoors or in the environment? Yes.
P: It's not one moment. I grew up where there wasn't like cell phone time and I grew up in a very small town and the water was the main event thing. That's where all of our 4th of July events occurred. School pictures, everything happened at the water. And so I just have such fond memories of it. And still to this day, I take my kids all the way down it. It's in Indian Head, Maryland. I take them all the way down there to those same areas. And it's still in good condition. And so I want that for my kids. But it's just a culmination of having fond memorable moments, birthday parties by the water.
$\mathrm{I}: \quad$ So you want to create memories for your children?
P: Yeah.
I: Okay. Because you had those fond memories as a child near the water. Okay.
P: Yeah, we did everything there.
I: Okay. Okay. Well let me give you, well, like I said, the National Park Service is trying to find out, they're trying to prove a hypothesis that they have. And they think that if you give people more access to spaces, especially those outdoor spaces with water, that they'll start caring more about the environment. So in other interviews we talked about, well you have to make it accessible. It can't be too expensive. But we're talking about public spaces, low to no cost, public spaces. How true do you think that is in your life, in your children's life, in your husband's life with the term, with the statement that giving people more access to outdoor spaces will make them care more. How true do you think that is?
P: Wow. That's a great question. I do think it'll make them want to enjoy that particular space more. But I do question, will it translate to all other bodies of water? So if I go to this one little lake, this is our lake, we do all the things here, am I going to want to take care of some place else where l've never been and think about that place.
I: So you need a sense of ownership?
P: I think that sense of ownership would just be with that particular place.
I: Right. So let's think about your place, the place that you're envisioning or you just talked about. So if people feel a sense of ownership to that location, that's when people will start caring about how it's kept, the quality of the water, the quality of the land surrounding the water.
P: Yeah. I think they'll care about that particular place.
I: Okay. So you don't know whether or not it'll translate into other places, but definitely that one. Okay.
P: I don't know.
I: Yeah, we don't know either. I messed up. Yeah. Yeah, that's the question. Okay. Steve, do you have any questions? I'm waiting for a message from him. Okay. Steve says we are good. So thank you so much, Renae. You'll receive a $\$ 75$ gift card around 7:00 PM Eastern time today by email. Thank you so much for sharing your thoughts with us.
P: Thank you so much.
I: Okay then. Take care. Bye-bye.

Interview 5: Renae; October 23, 2022
P: Bye.
[END]

Interviewer: Anyways, we are recording only because we have to write a report. We're talking to various people within the Chesapeake Bay area, so we're not going to be taking notes. Thanks to Zoom we can auto transcribe, which means that it'll write down what is said for us. It's easier to analyze and to do and write a report. However, you will not be identified in the report. This is anonymous and confidential participation. We're not going to say, "Sarah said blah, blah, blah." We're going to just say, "Respondent from Sunday's session said X, Y, Z, whatever." It's brief. It's 30 minutes. The best part is, you get $\$ 75$ at the end of, well, at the end of this day, around 7:00 PM Eastern Time. With that said, any questions for me before we begin?
Participant: Yes. You mentioned it's a discussion about waterways. I'm just a bit curious. What sort of organization is this being used for?
I: Okay. Well, most of the time it's not recommended to reveal the source, but this is for the National Park Service.
P: Oh, okay. Thanks.
I: Okay. Yeah. So they're the national agency that manage and monitor parks all around the country. They work together with local and state agencies, regarding natural reserves, parks, parks and recreational areas that are public, that are owned by the city, owned by the state. That's not a private club or anything like that. We're talking about just regular green spaces that's accessible by the public everywhere.
P: Okay.
I: Yeah. Okay.
P: Love it.
I: Did I answer your question?
P: Yes, you did.
I: Okay. Are we still good?
P: Yes. Yeah.
I: Okay, good. All right. So just a quick intro, Sarah, on you. We just want to know three things, just to get an idea of who you are. Where do you live? So city, neighborhood, that sort of thing. Who do you live with? Pets are included, of course. We do activities with our pets, well, some pets. We just want to know if you have any activity with them. And then what do you like to do for fun? What do you like to do in your spare time? Indoors, but mostly outdoors, if you have any. That's okay too, if you don't have any. So, take it away, Sarah.
P: For sure. So yes, I'm in Scranton right now. Actually, I'm in visiting a friend right now in New York, but I'm based in Scranton right now. I live with my boyfriend. I work remotely. So, we've actually traveled to seven different cities this past year. Initially, I was based in San Francisco. We put our stuff in storage. We rented full furnished apartments in a couple different cities and traveled a bunch, while working remotely. I'm in Scranton primarily because his aunt is having some health issues, but on a day-to-day basis, I'm just working on the computer a lot. I work as a product manager at a software company. One thing I really enjoy is working out, so running, hiking, both outside and if I have to, in a gym on a treadmill. Either way that's something I love. What else? I love cooking. I love baking. I love reading as well and even trying new restaurants and going out with friends, family.
I: Lovely. All right. Thank you very much for that little snapshot. I mean, that's a big move, from San Francisco to the east coast. We're east coast. Have your outdoor leisure activities changed? How has it changed?
P: Yeah. I actually went to college near the Boston area, so I was already used to the colder weather. Well, I guess part of it is this past year, we've been moving every couple of months. After Covid, we just wanted to see and explore as much as possible. But I would say, well, one thing is I feel like now that the weather's starting to get colder, I've been going to the gym more. While, when I was back in San Francisco, for working out I would always be outside, even if it was raining or something.
I: $\quad$ Yeah, because it tends to get really cold there in very weird times, that aren't supposed to be cold. If you think of May or April, I remember going there and it was cold. Then all of a sudden, the next day it's like 80 degrees and it's gorgeous.
P: Oh, you're saying in San Francisco? Oh.
I: Yeah, San Francisco, the weather. Yeah, it's because of the fog.
P: San Francisco has the wind and the fog. In the south Bay Area it's not quite as cold, but San Francisco, it's as you described, this on and off [inaudible 00:06:06].
I: Yeah. We're going to be talking now about your present life, right now in Scranton. Have you had time to do a little exploring? When you're hiking or working out or running outdoors, can you name any of the places that are nearby where you currently live?

## Interview 6: Sarah; October 23, 2022

P: $\quad$ Yeah. In terms of outdoor stuff, there's the Lake Scranton walking trail that we've been on quite a bit. That's actually almost a routine at this point. Just if for us, it's easy. I've even been alone, just running there. There' the... I've only been once here, but a bridge. I think it's called the Paul Kanjorski. Anyway, there's this bridge. From there, there were several hikes we did, but that was just one day. [inaudible 00:07:15]
I: Mostly it's Lake Scranton where you do your daily run or your workouts?
P: Yeah, I wouldn't say every day, but l've been there a bunch. I've been to McDade Park as well, a bit for hiking. Those are the main ones that come to mind. Of course, sometimes I just try to run through the neighborhood or whatever, but the Lake Scranton area I've enjoyed.
I: Okay. Now I'm going to ask the more introspective question now. Thinking about the course of your life and the water in particular, how have your ideas changed? If they have changed, have they changed how you feel about the outdoors through your life?
P: Yes. I would say they have. For me, spending-
$\mathrm{I}: \quad$ In what way?
P: I've started to care more about natural areas at wilderness preserves. For me, I wouldn't say it's a 180 . But one small thing that really, I guess was a shift in my mindset is, I was never one to litter, but I would see it often as a kid, growing up. Yet now, when I see it, it bothers me a lot more. It's something where it's hard to enforce. I would be someone who would support legislation for super high fines for littering or some type of... maybe even worse than a fine. Like a severe punishment, just because I see that and I see how it can desecrate the beauty of being outside, not just waterways, but everything, the trees, the ground. Then it can have ripple effects through the ecosystem. So, I guess that's a small example and perhaps a negative one, but seeing litter-
I: $\quad$ No, it's very valid. Why do you feel that anger? I guess it's a negative reaction, but why do you think you're feeling that more now than before?
P: I would say this is connected to the earlier question of what has changed. I mentioned that sort of frustration with seeing litter because to me, in my mind, I care a lot more about being outside. It's something that I value more in my life. I think that's partially because as a child, I didn't really have many opportunities to be outside so much. Now that I'm working, in terms of my own health, I find that it's not just physically but also mentally very uplifting for me. The fresh air... again, if it's just a walk in the neighborhood or something, that might not be real nature, but it's still for me is reinvigorating. Even at Lake Scranton-
I: $\quad$ So you take it as a personal offense when you see litter. Is that what I'm hearing?
P: Yeah. I wouldn't say I get-
I: I want to define that. Why? Why do you feel so strongly against it?
P: I guess there's a couple things here. First, as I've mentioned, I've come to value nature, being outdoors a lot more. I see litter as something that's ruining some of those outdoor spaces. Second, there's this idea of an externality, where typically, no one's facing consequence for litter. So, it's something where it impacts everyone in a negative way. It takes away from what could be something that everyone would enjoy. Yet the person doing the litter or leaving trash out... Sometimes l've seen just entire containers of trash. For example, I saw a trash bag that was half whatever, cut open, maybe not tied properly. The trash just spilled everywhere. To me it's disappointing, because I think there's one, this environmentalism component, sustainability component, in terms of the natural landscape. But also in terms of human welfare, it could pollute the water we're drinking. The breakdown of plastics in the river, if that gets into what the fish are eating, that could get into human systems, like our own bodies as well. So to me, the public spaces, I see as something that's very interconnected and part of a larger community. When you asked initially what has changed, for me, since it's for me been at points in my life, very revitalizing to be outside, to take long hikes. I did a backpacking trip a few years ago that was quite impactful. These types of experiences, for me, just have instilled more of an appreciation of that. I don't like the idea that one person's laziness could take that away from everyone else.
I: Awesome. Awesome. We're trying to do this study. Well, we are doing this study, to find out whether or not...Well, let me go back because it sounds to me Sarah, that after you had access or made the time to engage in these outdoor spaces, your level of care rose, about how the natural environment is being impacted, either by littering or pollution, et cetera. So the premise is, what we want to find out is, if we give people access to water or waterways, even though they're not engaging with it, like boating or fishing, but being near water, they'll start caring more about it. That's what it sounded like to me when you were describing, when you were a child, you didn't have too much access to the outdoors. You saw litter and it was just like, oh well, it's always been there. But then after you started engaging in outdoor activity, your level of care went up the roof, even to the point of just really having a very big, negative reaction whenever you see litter. Is that right? Is that true?

Interview 6: Sarah; October 23, 2022
P: Yes. I would say that's true for myself. You described it accurately. At the same time, maybe a caveat, as I have seen some people that, whether friends or even just acquaintances, that don't care at all. It's one thing to maybe prefer a more city life. It's something else to avoid being outside at all costs. My impression is that, at least from people l've encountered, is there's not necessarily a cause and effect relationship with being outside and having an appreciation for environmentalism or just more broadly, natural spaces. But I think if that potential is there, then being outside can invigorate it, can make it stronger, can incite more of a desire to protect those places.
I: Well, yeah. You said it very well there. In a previous interview, we had a respondent talk about, "I'm not really thinking about the quality of water on a global scale. I'm just thinking about it because... and she likes to kayak, "I'm just thinking about it because I don't want to touch it." More about, what's in it for me kind of mindset. I do care more about it because I don't want to interact with trash and pollution, for a health benefit. Also for me to be able to enjoy what I get out of being outdoors, which is calm, peaceful, invigorating, educational moments. Let me ask a question about, maybe in your family life, in your upbringing, were any of these topics discussed ever? I mean, of course, I'm assuming since you weren't that much outdoors, that means because either you didn't live nearby or you were in a big city. You didn't have many opportunities to do that. How was that, growing up, for you?
P: I would say I had some exposure, but just maybe more limited. I played soccer as a kid, so that took up a lot of my time. I guess while that was outdoors, it wasn't what I would call a natural... Actually, sometimes it was indoors. It was mixed a bit. Another thing is, just with other school commitments, financial constraints, we didn't spend that much time out outside. In terms of now, sometimes l'll go for much longer hikes. As I mentioned, I did this backpacking thing in Wyoming, a couple years ago, that was a week-long. So that was the most I've been outside, but that-
I: Is it expensive? How do we make it so that people can get more access to those public spaces, even though it's not a backpacking journey through Wyoming? Lake Scranton, just can that association, that park agency, do more to give more people access to it? What can they do?
P: For me, honestly I think a lot, especially now that I'm an adult. It's, I guess a bit different if someone's a kid or in high school or something versus a working adult. But at the adult level, I think for me, it comes down to prioritization of time. Especially, it's sometimes maybe easy to say, "Hey, I'll just sit inside and enjoy a donut or whatever." I'm not criticizing that. I love that as much as the next person, but it takes some sort of a... My point here is, I think some of it is internal.
I: A personal choice. A personal initiative.
P: Yeah, personal initiative. Another possibility could be access to public transportation. In terms of accessibility for a larger population, one thing that comes to mind, maybe if there were led hiking groups, where they had some sort of bus that could pick you up. To me, that seems like a relatively low-cost option on the sponsor or organizer's part because you're paying someone one or two hours to lead the hike and the bus. That could get a much larger population involved and that does enable access, assuming that they have the time and they're willing to take that initiative. I think that removes some of the barriers in terms of transportation. So, you're not getting on a plane to get to Wyoming, but it does give one access to those outdoor spaces. I mentioned a minute ago, we went on this hike near this bridge. It was this bridge near. Maybe it was our own fault, I'm not sure, but we got a bit lost finding the hiking trail. So, definitely good signage. It was our first time, so maybe that was on us, but-
I: Yeah, because that could turn someone off, maybe someone going there for the first time. They'll say, "You know what, I'm never going out to the outdoors again," just because there wasn't proper signage. So having proper signage, more communication, communicative interactions, like the signs. You talked about the guides. Some kind of program that allows people of all incomes to participate in, so that it's not an expense that... so that expense is not a barrier. Okay. Thinking about the waterways, like in Lake Scranton, I'm not familiar with Scranton, so you need to help me. Describe the area. Is it close to the city? How far is it? How accessible is Lake Scranton? Can you take public transportation there?
P: I've never taken public transportation there. Often, l've just driven. I guess it depends where in the city someone's located. I'm near Viewpoint Mall. I would say not just Scranton. Say McDade Park, some of these places it's just more convenient to have a car, especially for me, if I want water or a snack after. I honestly haven't looked into taking buses there, but mostly-
I: You're not familiar with if there's a bus route that passes through or makes a stop there. Is that right?
P: Yeah, I don't know. [inaudible 00:23:18]
$\mathrm{I}: \quad$ But would it help?
P: Well, for me, since we do have a car, I don't know if it would impact me particularly per se. We just actually got in this car, since moving to Scranton. So, most of my life, I have not had a car.
$\mathrm{I}: \quad \mathrm{Oh}$, right.

## Interview 6: Sarah; October 23, 2022

P: So yes, having a bus route or what comes to mind for me is, maybe not even something every day. If there was once a week, where you had a schedule and knew, hey, if I show up at this time and I'm back at X spot, I can get a bus back, that would be great. I think it's something, maybe for a couple dollars, that could help... I don't know if what the funding situation is, but maybe if there was a small fee, but something affordable. A dollar there, a dollar back, that could help fund the system, yet still make it accessible, since a couple dollars won't break the bank for anyone. So to me, that could be something that could help people get out. Also, there are not many... just in general in Scranton, l've seen very limited bike lanes.
I: Okay.
P: So that's something that could be improved. I think biking in itself, it gets people outside and [inaudible 00:25:05]
I: Maybe renting a bike or renting a kayak. Yeah?
P: Yeah. I actually have not been kayaking in this area, but I've been in Maryland, Solomon. There's this small town called Solomon. It's part of Solomons Island, in Maryland. There I've a bunch of kayaking and canoeing. Then there's also this park. Lots of outdoor activities there. But regardless of location, I think accessibility to some sort of bike paths could make it a lot easier to get anywhere to do a hike. Because at least for me, before I had a car and especially when I was in college... as I mentioned, I was in school near the Boston area, I was not outside so much, in part because to get to a natural reserve might be a $\$ 40$ Uber. So on top of the time, it starts to get really expensive. While if I had a bike, that changes that. If someone was serious about using the bike, you could get a bike, obviously a lot cheaper than a car and to use that to get around. But for us, at least where I was located, it was just a more isolated area and there were no... Again, the same thing, very few bike... In fact, back then, there were no bike lanes at all.
I: So definitely bike lanes, public transportation accessibility. Let me ask you this question and I think we're going to be done, because we're just two minutes over the time. What is the special ingredient that we need to have... Let's say for example, once the person is in that natural environment, particularly near the water, what is that special ingredient that we need to add, so that the person that just got there can maybe start caring more about the environment, like you do? What is the magic sauce that we need?
P: I think a couple things come to mind. First is definitely education. When I mentioned maybe someone giving a guided hike, having someone that has some expertise, some background in this, sharing the importance of protecting these spaces. I guess related to that, the fragility of many environments, if there are pollutants or trash or whatever. Another thing that comes to mind is making sure it's well maintained. I mentioned the litter, but I've seen... Actually, I've seen this at Lake Scranton, just a massive party. Not a nightclub type party, but just maybe 10 or 12 people drinking, smoking. Those people were littering as well. For me, that was a turn off because I wouldn't-
I: So we would definitely need more enforcement, litter enforcement to not just... I mean, I'm going to call you the captain of the litter police, because you'd definitely want some punitive actions against these litterers. So definitely more signage, more litter code enforcement at these public spaces. Magic sauce ingredient, what else?
P: I think maybe another thing for me, when you say magic sauce, I personally love spending time outdoors, just me and my boyfriend. But I also enjoy going as a group. I think events, activities that grow a sense of community could be that magic sauce as well. I haven't done this really in Scranton, but back home and then also in college, I was part of a running group. It became not just working out, but it became friends I had. Once you're part of that community, it was basically, you would just show up and run a couple times a week. It made me just so excited to go every time, even if it was not the best day for me or something else was going on in my life.
I: $\quad$ Some structured events, community events to involve people-
P: Yeah, community building. Maybe events where, I don't know, going out to schools, universities, perhaps even reaching out to people that might be in something similar. So, maybe a sports team, seeing if they want to one day, maybe on their off day, do a hike, so they're still getting in some workout. That type of involvement is [inaudible 00:31:03]
I: So some cross-connection events sort of things.
P: Exactly.
I: Not necessarily runners. It could be the flower society. I'm just coming up with something. Okay, I get it. Okay. I'm definitely out of time. I'm sorry that we went over. But you will get a $\$ 75$ gift card at 7:00 PM-ish, more or less around 7:00 PM. I thank you so much Sarah, and I wish you a wonderful rest of your Sunday.
P: Oh, thanks so much as well. You, too. Have a great Sunday.
I: Okay, likewise. Thank you. Bye-bye.
P: Okay. Bye.

## Interview 7: Sheri; October 24, 2022

Participant: Thank you.
Interviewer: Oh yeah. Okay. Sorry.
P: Okay, got it, sorry.
I: I'm 104, that's why we're recording because I can't remember anything. But we're going to talk about water and how you feel about it. And I'm an independent moderator and this is for an organization called, it's something to do with The Chesapeake, I don't know. So we're going to be talking about how much you care... The Chesapeake Bay program. So if you love the Chesapeake Bay program, that's great. And if you don't care about the Chesapeake Program, I don't care. But I will ask you to tell me the whole truth and nothing but the truth. And is that a fake background? Because if it's not fake, I'm going to ask you to go pick up some of that artwork. That's beautiful behind you.
$\mathbf{P}$ : It is fake.
I: I thought you were going to be fun, but [inaudible 00:01:00]
$\mathbf{P}: \quad$ It is fake. Well, that's as good as gets.
I: Okay. So we're going to be talking about water today. We're being recorded. My boss is listening in. We're going to be talking about fresh water. If at times, because my printer doesn't work because half of my [inaudible 00:01:23], so I have to look at my phone, this is plugged in behind my back and if the computer falls off, it's all fine, okay?
P: Okay
I: $\quad$ So where do you live?
P: Downtown Baltimore.
$\mathrm{I}: \quad$ Well, where downtown?
P: Walking distance from the Ravens Stadium in Pigtown.
I: Whoa, whoa, whoa, whoa. Okay, so now I'm really jealous. Okay, maybe we're friends again. So you live in a really cool part of town?
P: I do. I really do. It's awesome.
I: How long have you been there?
P: Six years.
I: And do you live by your lonesome or do you have other wild animals with you?
P: I have two dogs and a husband. I was going to say three, but that wouldn't have been that funny. But he lives there
I: I would have laughed.
P: He actually was there before we got married, so I had a house in the suburbs, so we gave that up to live downtown.
I: $\quad$ No kidding.
P: Yeah.
I: $\quad$ No kidding. So what did the Ravens do yesterday? I forgot.
P: Won.
I: Okay. Were you in a bar downtown?
P: Say again?
$\mathrm{I}: \quad$ Were you in a bar downtown rooting for...?
P: I was not. We don't do that very often just because it can get to be expensive. And when the Ravens play at home, we stay in the house all day long because people tell you...
I: Yeah, exactly.
P: It's ridiculous. So we just kind of hang out at home.
I: Okay. So now I have to work. Are you ready to work? No Sheri, I have to go back to work.
P: Sure. Yes, yes, yes.
I: So, we are interested in understanding how people's ideas about the outdoors and the water in particular might have evolved over the course of their lives and what brought about that change. And so l'm not talking about the ocean. I live in [inaudible 00:03:29], by the way, by my lonesome and [inaudible 00:03:33]. I'm not talking about the ocean, but rather rivers, streams, lakes and bays closer to where you live. It doesn't have to be a remote place or pristine place, unlike the Baltimore Harbor. It could be a river or stream running right through your town. So first of all, tell me what water is your water, where you live, that's outside.
$\mathbf{P}$ : It is the Chesapeake Bay. That's the closest to me.
I: And where you live, you must be at the harbor a lot too though?
P: $\quad I \mathrm{am}, \mathrm{I}$ am.
I: So tell me the geographic expanse of your water, the water that belongs to you?
P: $\quad$ So we have to pay for water downtown.
I: $\quad$ Not the drinking water. Not the drinking water, but the ones outdoors.
P: So the ones that, when you say belong to me, please tell me what you mean by that?
I: I know, I always speak facetiously. The ones with which you have an emotional connection or the ones that you frequent or the ones that you remember fondly as a kid or now, where you...?
P: $\quad$ That would be the Chesapeake Bay for me. That is the Chesapeake Bay for me. I am born and raised in Baltimore City. I went to school in Baltimore City. I was a teacher in Baltimore City, a principal in Baltimore City. So there were field trips all my life to the Bay. We got on a Port Welcome. So it's been a part of my life forever. And I've seen it go from a place where it was fun and an educational experience, to it being the trash that it is now.
I: You said a word I didn't understand. You got a Port Welcome, you got what?
P: It was the boat that used to take the children and tourists around the Chesapeake Bay so that you could see Domino Sugar, you could see the mills and the ports when they brought them in, when they built the buildings, the restaurants and all. It took you all around downtown, all around the vicinity of the harbor, the Inner Harbor.
I: You see, took, that makes me think that it doesn't exist anymore?
P: It doesn't. It doesn't. We do have taxis. We do have taxis, and then we have a few other ships and boats like people party and stuff. It's just the evolution of life is just very different. So they don't do that anymore.
I: And so when I was talking about your body of water, I was looking to see what your emotional connection is. You've described the water, but could you tell me when that emotional connection that you have started? You mentioned growing up in Baltimore, tell me how your connection with the Chesapeake Bay started, give me a journey of you and the Chesapeake Bay.
P: So as an elementary school student, that was one of the trips every year. That's just what you did. Everybody knew that you were going to go to the Chesapeake Bay and then when they built the pavilions, we were able to go and then have lunch. And then when you got older, when we graduated, or the closing ceremony for the eighth grade was on a boat around the harbor. And then as I became an adult, and like I said, a teacher, I taught in a very impoverished area where students, when we went, that was the only time they could go. So it was always this huge lesson. And I can remember as a second grade teacher, and literally the school was 15 minutes from the Inner Harbor. Students had never even been to the Inner Harbor or seen water. And I was a little older and I had become a mother by then. So that meant a lot to me, that it was second nature for me to take my son. It was just what we did on the weekends. But the students that I was a teacher, they had never experienced it. And I can remember actually going to the Inner Harbor and us just looking at the water, but by this time, it wasn't as bad as it is now, but it was getting there. So part of the curriculum was to Save the Bay. So they would have to write poems and do all of these things that they would do in order to Save the Bay. So I think that's when I started to really become, I was already connected, but I think it was full circle for me. Or there was a global perspective that everyone didn't have the firsthand experience to experience beautiful water that was so cool. There was one time we could get crabs from the Chesapeake Bay.
I: I still eat those crabs.
P: Oh, I don't eat crabs, believe it or not. But everyone in my family does. But there was a time that the crabs used to come from the Bay.
I: So you have memories as a child, even with your parents?
P: Oh absolutely. Absolutely.
I: And your grandparents?
P: And my grandparents, who's the first generation in Maryland.
I: Okay. So what was that like for you, to be with kids who'd never seen the water, they hadn't even walked 15 minutes away? What was that like for you?
P: It was an eye opener. I guess I just took it for granted that they had seen it until then. And I also remember, this has nothing to do with the water, but we would take our lunch to eat because again, it was an impoverished area. So field trips were that the cafeteria people packed the bags and all. And I remember taking my lunch and they had never even tasted cantaloupe.

## Interview 7: Sheri; October 24, 2022

I: Oh my gosh.
P: And that was my favorite fruit. And I can just remember sitting by the water and all of us having lunch. And so then that became a personal thing for me. So every year I made sure we went to the Inner Harbor to eat lunch by the Bay and I would make fruit salad and share it with my class.
I: Wow. Do you know Sheri, my guess in this job, that sometimes I have to maintain. How did you maintain, when you were with kids that didn't have the same background as you?
P: It was not that difficult. I think because I was an inner city kid, I just happened to have parents who, I was exposed to a lot and my father made sure that I took advantage of a lot of things. So I don't have people in my family who are as impoverished, but I can relate to inner city kids because that's how I grew up. So it was just sad for me that they did not have those opportunities. But I was glad that I was able to share a piece of it with them.
I: $\quad$ No kidding. No kidding. What do you think changed in those kids' lives when you did that?
P: So them knowing that beyond the wall where they were, there was a life. That there was something beyond the wall of the projects that they lived in. Nobody talked to them about that. And for some of them, their families didn't go that far.
I: Wow. Well, speaking of, l've had to ask my neighbors for food because the refrigerator had one onion in it. So I think there's always been a time in one's life that that's always happened. But my gosh. So if I were to ask you how your feelings were about the Bay as a kid and how your feelings about the Bay as an adult, and even I'm going to say a wife and a mother, can you tell me how your feelings have changed? And maybe it's been a straight line or maybe it's been a wiggly line. How have your feelings changed over time?
P: I'm proud of the Bay that we have, but I am very saddened that people don't take care of it.
$\mathrm{I}: \quad$ Tell me more.
P: I'm sad that people throw trash and we have the scooters, we have doctors and people that work at the hospital that live in that neighborhood, and that's their mode of operation, those scooters. The Uber scooters that people literally, there are kids that go around collecting the scooters and throwing them in the Bay. And that makes me sad that we can't have nice things.
I: What do you think prompts people to throw scooters in the Bay? Is it just revenge or anger or something?
P: No. Well, I think some of them, they've never had anything, so they don't know how to treat anything.
I: Oh.
P: I really do believe that's what it is. They break them, but at one point we were missing the scooters so much that it made the news and it was literally, they were finding them at the bottom of the Inner Harbor.
I: Wow. And so do you remember anything that the kids said when they first saw water? What was it like for these kids to have the water in front of them?
P: I do. I remember it because they were in the second grade, so a lot of them didn't understand that it was not a pool. They couldn't just jump in and touch the ground.
I: Oh.
P: You go back to your classroom and then you have that lesson. But a lot of them, the boats, they were in awe of the boats. And for as long as I can remember, I forget what it's called, Shipman's Week, where the navy comes and they dock. So we started going so that they could see real live sailors and all. So it was very eye opening for them and they had a lot of questions. I can't really remember what it was, but very appreciative. Very appreciative. And I had been at the one school for years and I remember, like I said, as a second grader, I had parents who wanted their kids to be in my class because they knew we were going to take a trip.
I: I was just going to ask you about that. That must have made, it's a ripple effect. Well, I have so many questions to ask you about, I'm going to have to get back to these.
P: Okay.
I: So this question is about the change in your feelings, I'm going to add that. The change in the feelings that you've experienced or the change in the feelings that you caused with your babies, your kids, either in school or your own. Think of you as a child and the feelings that you had about the Bay that was yours and you know, you went there all the time with your family. And then when your feelings included concern, what was that either gradual change or instant change?
P: I think it was gradual, because to be honest with you, there was a movement for the city. So it was easy for me to fall into that. Keeping the Bay clean, wearing the T-shirts, having the bumper stickers. It was very easy to fall under that when someone else was spearheading it. And I will tell you that my feelings, I don't think that they changed, but my focus shifted, once I was no longer, I didn't see the water every day because now I lived in the suburbs. And you kind of get away from it because it's not in front of me anymore. And
then I guess depending on who the leaders are of the city and what their platform is, it just kind of went away. So people still know that something needs to be done about the Bay, because it's unhealthy. They had the mercury, remember the one time, well you might not know, but the fish were dying and coming up to the surface. And so like I said, when I got away from it, it subsided for me. It just wasn't a priority for me anymore because it wasn't in my face. Not that I was very happy about what had become of the Bay, if that makes sense.

I: $\quad$ Right. So if you were to hang an emotion along your journey, what were your feelings? I'm going to start with indifference as a little kid, and then perhaps I add that one in, but something like that as a kid, and then where you are now with your feelings about the Bay?
P: So I was in awe as a kid and then I began to understand and really appreciate. So still, not in awe, but appreciate what the Bay actually meant to Baltimore City. And then still very proud of it because of what it represents. But again, just a little disappointed in how we treat it. I'm very disappointed in that we don't have advocates or ambassadors for the Bay.
I: Okay, so limiting my questions to one at a time, when you are proud of the Bay and what it represents, what do you hope it represents to others and what does the Bay represent to you? Tell me about that.
P: So l love the fact that there's a school that is connected to the Bay and they have a restaurant and they cook. They teach the children things about the Bay. And all of it is supposed to be Chesapeake Bay centered, and they have camps for the kids. So I love those things about it. It's only one school, so not a lot of students are able to experience what it offers. But I love the fact that there are things that's still happening for the students, but it's not all the schools. So I'm not sure if I answered your question or not.
I: I think you did. So Ambassador for the Bay, what is that for you?
P: I think for me, it would have to be more than one person, but someone that's leading the pack or the city and changing what the Bay looks like now or what has become of the Bay. Like the continuous cleaning of it, the exposing these inner city kids to the resources that the Bay can offer.
I: Well, what's the difference between an ambassador and you, that's what you're doing?
P: I was waiting for that question, because I have not done that, and shame on me maybe, but I haven't. Like if someone else...
I: Wait a minute. You take the second graders to the Bay.
P: But that's been years ago.
I: Oh.
P: That's been years.
$\mathrm{I}: \quad$ What made that stop?
P: I became a mother. I started working on my Masters, I moved to the county. Life happened really.
I: Yeah. Yeah. Are you in a position, just out of curiosity, this isn't... Because I'm supposed to be doing a lot of things like losing weight and go to the gym, but I mean, what is between you and being an ambassador now or so?
P: Well, I could definitely answer that. So my child is an adult and he's out of the house. I am a grandmother, but he takes care of his daughter. But I have older parents. I just lost my great-grandmother who I helped care for. I'm working on my Doctorates. I work full time. So it's a lot, yeah.
$\mathrm{I}: \quad$ [inaudible 00:20:55]. Who should be ambassadors for the Bay?
P: And to be honest...
I: If you put your hand on your hip and say, "Yo, yo, yo." I mean, who should be ambassadors for the Bay?
P: No, you're right. You're absolutely right.
I: But who should be? We know this is for the Chesapeake Bay Program, but I don't know, is the mayor ambassador enough for the Bay or businesses enough?
$\mathbf{P}: \quad$ So I don't know if it would be the mayor, but I definitely think that if it were the platform of a city leader, then people would fall in line. I do believe that.
I: $\quad$ Give me an example of the kind of, either by name or title.
P: I remember Schmoke, our mayor, Kurt Schmoke, remember he was mayor? Maybe not. He did a lot for, well, it was "The City That Could Read". That was one thing. And then "Cleaning the Bay". So there were people who I guess worked for him, that was his platform. So they got out in the communities to spread the word about keeping the Bay clean and healthy.
I: Okay, so here's a theory. The Chesapeake Bay program has a theory, and you've almost talked about it, that the more that people have access to the water, the more they're going to care about the water, and the more careful they're going to be. Maybe junior ambassadors, or at least maybe they're not going to throw
scooters in there. Anyway, the theory is, the closer to the water you are and the more you have access to the water, the more you're going to care about the Bay and its wellbeing. True, not true? Maybe? What's your response?
P: I agree with that. I really do. And I think I agree with that to the point where we discussed before that when I did have access and was using it, it was to the forefront of my mind more, so it was prevalent and then I moved away from it. But to be honest with you, I'm back in the city, and so now I'm walking around, I see it, the yoga class that I take is by the water, where I work out is by the water. So I see those things and so I care about what it looks like because I'm there two or three times out of the week.
I: I'm thinking of the Convention Center. I'm thinking of all the bars and restaurants and stuff in [inaudible $00: 23: 39$ ] Point. By the way, one of my favorite events is Free Fall Baltimore. I love that. I had such a good time. So now that you're back in the City, has anything changed for you in terms of what you say to friends and family, what you might say at work? Has there been any change, or even in your yoga class or in your gym, or in all the things you're doing? And would it be a doctorate? I mean, I'm teasing you, but I'm not.
P: Yeah.
I: What's changed for you, if anything, now that you're back in town?
P: So you know what has changed? I sing the praises of everything that happens by the water more. Nothing has changed about me preserving it or keeping it clean or making people know about it. But the invitations to lunch and brunch and working out with me in the yoga class, people get invited and I have more people than before wanting to be downtown by the water, doing those things. But l've not done anything to preserve the Bay.
I: But it sounds like you have an ulterior motive. I mean, you're almost supporting this theory that the more they see the water, the more they're going to care about the water.
P: I do, I have...
I: Is that in the back of your mind though, or have I forced you [inaudible 00:25:11]?
P: No, it has not been in the back of my mind. It really has not.
I: Okay. So I think I might have to read this off the phone. So just reviewing what you've been doing differently, you've been inviting more people. I'm almost done. You've been inviting more people, just near the water because you live near the water and it's made you think more about the water. Has it made you feel any differently now that you're back?
P: Well, I love it. It's calming and there are so many parts of the water, people automatically think about the side with the pavilions. I frequent it on the other side near Domino's Sugar. I don't know if you... Really where the Under Armor is.
I: Is that where the Cuban restaurant is and stuff like that, or down there on the other side?
P: Yes.
I: Okay. Yes. That Cuban restaurant is wonderful.
$\mathbf{P}$ : It is.
I: Anyway, so let's sum up. Our client manages parks and creates access points to the water. They think that giving people access to the water will get them to care more about it. You answered about that. If they're going to work on this theory, that the more public access points there are, one person mentioned either private or public, that if there's a private access, maybe that can help monetize the improvements. I don't know. So what advice would you give to them as they try to concretize this hypotheses, that giving people more access is going to make people care more about the Bay?
P: I think that the people who are going to do right by the Bay are doing it. They may not be actively saying stuff, but there are a lot of us in the city who are not throwing trash in the Bay, who enjoy the beauty of it, and who can have meals by the water, do whatever by the water. I always say to people who are not a part of Baltimore that it is a very interesting place, and so I don't believe that having more access is going to do anything. I think that it's a broken city. I love my city, but it's a broken city, and we have too many people who don't respect the beauty and the things that we have in the city. So giving full access to everyone, I'm not sure that that is really going to be a solution.
I: What's your fear?
P: That people who don't know how to treat nice things are going to have access and make it even harder or worse than those of us who want to do better or who won't hurt the Bay.
I: So your implicit advice is, give more access, but give more training, provide more ambassadors? Not even?
P: No. So I think that giving more access, I think fixing what's broken in the city, I think is the answer. And I don't think that it looks like full access. I think it is the root of what's broken in Baltimore City.
I: Yeah.
$\mathbf{P}: \quad$ The Bay is just impacted by what's broken.
I: I think you're right. Yeah. Because I think of Baltimore as a weeping city, I do. I mean, I love Baltimore. I'm just about the only one among my friends who loves Baltimore. I live in [inaudible 00:29:23], and I lived in Annapolis for a while and I'm about the only person that loves Baltimore. I mean, I love Baltimore anyway, but I'm trying to convince my boss, Steve Raabe, who you can see, the Bay is doing better. And if I could convince him, he'll pop up and tell you how the Bay is getting better, because we do a lot of projects about the water in the Chesapeake in particular. But if there's any last tidbit of advice that you would give to the Chesapeake Bay Program as they try to have people care more about the Bay and one of their solutions is to provide more access. Oh, I got a direct message from Steve, I can tell you. So I do know that the Bay went from a D, I think it's either C+ or B-.
P: Okay.
I: And there are lots of river keepers, that if you go to the river, keep your site. I can't remember the names of the river site, but...
Steve Raabe: Maybe I can help. I can help.
I: $\quad$ Thank God for small favors.
Steve Raabe: Hi Sheri. Thanks for being part of this discussion tonight. No, I hear what you're saying about the harbor and it's tough. There's a lot of bad stuff happening. The good news is though, that there's a lot of people that are volunteering. And in Baltimore, I don't know if you've heard of Blue Water Baltimore. Have you heard about them?
P: No.
Steve Raabe: Well, there's an organization based there, I think they're on Sisson Avenue, but they're mobilizing a lot of volunteers and they're doing a lot of good stuff in the city. There is a lot of work to do as you know. I mean it's a big job, but the Bay as a whole is improving. It's actually improving. And so all the indicators are going up and it has a lot to do with just people helping in their daily lives. So that's one of the things that we're exploring, is how to motivate people to join into the effort. I mean, I don't know, you are a person that just loves the Bay. You love the Bay, you love the Harbor and the Bay.
P: $\quad I$ do.
Steve Raabe: And you have these wonderful [inaudible 00:31:42]. I mean, it's amazing. And so what would you need to hear? What would be the thing that would get you to say, "All right, I'm busy with my PhD, but I'm going to spend a little time..."
I: And neither of us has a doctorate, so you're still [inaudible 00:31:59].
Steve Raabe: Right.
P: I just think really, exposure. I didn't know about it. So I wouldn't be able to participate if I didn't know about it. So I think exposure is one thing. Probably the only thing. I would be very honest with you when I say I wouldn't do every First Friday or something, but definitely community service and actually being a teacher or an educator, it's kind of like in my blood. So I think just knowing really.
I: You'd be a good copywriter. I bet you would. I mean, there might be things you could do. Sorry [inaudible 00:32:47] you know?
Steve Raabe: Kathy's loaded with good ideas.
I: Yeah, I know.
Steve Raabe: Well, listen, I'll back out. Thanks Sheri for your time today.
I: $\quad$ Are there more things that you can say, Steve, don't go away. What are the riverkeepers?
Steve Raabe: I mean, there's a Baltimore Harbor Keeper, and that person is responsible for looking after the water. I mean, it's a big job. The riverkeepers and the harbor keeper tend to be, let's say, activist. So they tend to file lawsuits when that is needed and otherwise be kind of tough. And that edge is needed a little bit sometimes. And then there's others that are doing nicer, softer things like planting trees. And there's a lot of good tree planting going on in Baltimore right now. The city's got a pretty good commitment to tree planting. It's hard to tell that, I agree with you. When you drive around the city, you don't feel that yet.
P: $\quad$ They haven't got any bike lanes.
Steve Raabe: Yeah, right. We need everything. Bike lanes. I mean, it drives me insane. The streets are in such bad shape. There's just so much. So much needs to change, but people are working on it. Yeah.
P: Yeah. That's awesome.
Steve Raabe: Anyway, thanks so much for your time.
I: Sheri, thank you so much. You're going to get 75 bucks in an email link.
P: I appreciate it.

Interview 7: Sheri; October 24, 2022
I: Soon, I promise you soon. It could even be tonight, Wednesday.
Steve Raabe: Tonight.
I: $\quad$ Sheri, thank you so much for your time.
Steve Raabe: Thank you.
I: Good luck on your studies. Where are you in your doctoral process?
P: In my second year, I have a year and a half, two years to go.
I: Do you know what your thesis is going to be yet?
P: Actually, yes. I am working to see the impact on personalized coaching for teachers that teach in urban settings because of the high mobility rate.
I: Whoa. That's fabulous Sheri, that's fabulous.
P: Thank you. Thank you.
I: You're an asset to the planet.
P: $\quad$ Thank you. I appreciate that. I try.
I: I wish I lived near you, Sheri. Okay, so I'm [inaudible 00:35:12]. So no reds, no reds. Bye Sheri.
P: Thank you so much guys.
I: All right. Bye.

Participant: Okay, good.
Interviewer: Oh, there is our cue that we are recording this interview. We only do that is because we have to take a transcript of all the interviews that we do, write a report. It's just easier. Because now that it's automated, we don't have to type your answers.
P: Oh, okay.
I: The machine does it for us.
P: Okay.
I: What that means also is that despite that we are recording, your anonymity will be preserved. This interview's confidential. We won't reveal any personal identifying information, your first name, last name, et cetera. We're just going to say, "Respondent in Sunday's session said blank."
P: Sure.
I: Have you participated in a market research study before?
P: Yes.
I: All right. Well, that little spiel was all familiar to you, I'm sure.
P: Uh-huh.
I: Then, the fun part is that at the end of our 30-minute talk, you get \$75-
P: Oh, wow.
I: ... at 7:00 PM today. How does that sound?
P: Very good. Thank you.
I: Oh, wonderful. Let's get started. Essentially, we are exploring some ideas around things that are found in your neighborhood, in your region, and especially when it comes to public access, spaces to the natural environment, particularly water areas, not talking about the ocean per se, rivers, lakes, streams, that sort of thing. That's the topic of the day. But before that, I'd like to get to know you a little better. Just tell us what city do you live in, who do you live with, and that could be pets included. Then, what do you like to do for fun, your leisure activities, things when you're free, that you have a day off or a weekend off, or maybe just an afternoon off? What do you like to do for fun? Let's start off with where you live.
P: Kingsville, Maryland.
I: Who do you live With?
P: My husband.
$\mathrm{I}: \quad$ Any pets?
P: No.
I: What do you like to do for fun?
P: We do a lot of walking, walking trails.
I: Oh, nice.
P: I also do a lot of arts and crafts, cross-stitching.
I: Let me go back to your walking activity. Where do you go?
P: Variety of places. We go to Havre de Grace. There's a nice promenade trail we walk. It's in Mount Vista in Kingsville. It used to be a golf course, and now it's a semi-walking trail. We go to a walking trail up in Harford County. We frequently go to Ocean City. We go to Ocean Pines. That's around the water. We go to Northside Park. That's also around the Assawoman River. Chesapeake City, we walk along the trail, the canal trail there. A lot of different trails.
I: Wow. Great. What's the one closest to you?
P: The one closest to us with or without water? I mean, the one that's closest to us is the golf trail, but that's not really around water. The one that's closest to us with water would probably be Havre decision Grace. It hugs... I think it's the Susquehanna that empties into the Chesapeake Bay.
I: Wonderful. Let's talk about those spaces that are near to your home. We want to understand how people's ideas about the outdoors and water in particular might have evolved over the course of your life. I know that sounds like a very big question, but we're going to break it down into little nuggets so that that way it's more digestible to understand. What brought you to that change? We're not talking about the ocean. I know we all love Ocean City, but we're not talking about that. We're going to be to... Talk about those river, streams, lakes, or even the bay areas closer to where you live. Doesn't have to be remote. It doesn't have to be pristine. It could be in the middle of a city. It could be running through the town that we live. Let's keep it local in that sense, okay?

## P: Okay

I: All right. The changes that we're... I'm going to describe to you what's the moment that we're looking for to see where you can explore in your mind how and when you thought about that change. Maybe it hasn't happened yet. Maybe it's changing right now. The changes in the attitude could be something that gradually happened over the years, or maybe it was an event and it was more sudden, like an epiphany of some sort. Could go back to your childhood or ideas that have changed throughout your life as an adult or maybe someone you met that influenced that change. Where do you find yourself? Let's see. Let me give you some examples. For example, how much do you care about the national environment around you? Does keeping the natural environment in a more cleaner state, is that something that you care about? Does it motivate you very much? And how have your decisions been shaped because of that decision? It's okay if you don't care too much about those things. Just tell me where you're at right now. Then, see if a change did happen in your life.
P: Well, I started walking just from the healthy aspect, I guess, about in the early 2000s. Just my husband and I have been retired. During that time, my husband did a lot of research into just different trails to walk on. We just found that walking by the water was... It was like twofold, meaning we enjoyed the walk from a healthy standpoint, but just the beauty of the water just added the enhancement to our walking. Again, walking along the trails, walking along the promenade. You're asking about how we feel about the waterways. We do contribute to the Chesapeake Bay Foundation as part of our annual giving across all charitable entities. Again, the waterways just enhance what is already a nice activity. We're constantly pursuing to go around our trails that are around water. I mean, it's just fun. I mean, we're walking around Ocean Pines and there are ducks in the water. You go the promenade, you just see the sun rising over the water. It just really enhances the walking experience, especially when you're doing fast walking. We're not doing leisurely, so it balances out pleasure and physical activity.
I: There's a physical benefit as well as I'm hearing an emotional benefit?
P: Right. Certainly. It's just very relaxing and easy when we're doing a physical activity.
I: It makes the workout-
P: Oh, yeah.
I: ... a bit easier-
P: Enjoyable.
I: ... to be in a beautiful area.
P: Yes. Yes. It really adds to. Instead of just doing on treadmill, which we have to do in bad weather, we try to get out every day to find different trails. We try to find the trails that are along any kind of waterway. My husband's really good at researching that out. He belongs to certain... There's all these trails in Maryland, like Deep Creek Lake and everything. We're constantly trying to find these trails that are along waterways.
I: You started in the 2000s. Your husband sounds like he's introducing you to-
P: Yes.
I: ... these new things.
P: Yes.
I: I'm assuming, I mean, he's an influencer-
P: Yes.
I: ... in your decision-making.
P: Yes.
I: How were you like before? Did you really care about these places before?
P: Yes, but I think I appreciate it more now, especially that I'm retired. Then you're broadening your horizons. I really see from his perspective that the enhancement of walking along a waterway really does add to the whole walking experience. When I'm walking, I was walking primarily just from the health benefits. Now that I'm retired, I have the time, [inaudible 00:09:55] health benefits, as well as the enjoyment of the scenery, meaning the water scenery.
I: I want to talk about more about the effect, because you say it's pleasurable. Let's talk about that effect that spending time near the water has on you. Yeah, it's fun. Other than it's fun, I want you to think about... Throw yourself walking. Imagine yourself walking near that waterway that you and your husband like to go to. You say it's pleasurable. It's fun. Pleasurable means fun. It's entertaining. But, what are the emotions that you're feeling other than entertainment? Describe to me the feeling, I mean, as opposed to your treadmill.
P: Exactly. For example, when we go along Chesapeake City, there's the canal there. When we walk in the morning, it's interesting. It's informative. We see the boats go out. We see the different types of boats that are going out early. Also, I see the speed. I mean, there's what's called a wake. Until we started walking, I

Interview 8: Sherrye; October 23, 2022
didn't understand all those terminology. We would come to understand what boats were going in and out of the canal. Yesterday, we were walking around Ocean Pines, and there were ducks. There were swans. You could also see the ducks and the swans interacting. You're getting really a-
I: What's the feeling that observing the wake, watching the ducks and the boats go by, the sun hitting the water at that right moment? What's the feeling that you get?
P: It's very peaceful. At the same time, it's informative. It's information, meaning I saw ducks and swans yesterday interacting. At one point, they weren't interacting very well. It's informational. It's calming because you just see a different part of nature or a different part of life that you don't normally see in your day-to-day life. The boats are interesting. You see people going out from the boats on the canal or pleasure. You'll wonder, "Well, I wonder what they're doing today, if they're going out fishing."
I: So curiosity.
P: Yes. Yes.
I: It sparks your curiosity. How about your husband? Has your husband ever talked to you about how he feels when he's by the water?
P: Oh, yeah. He loves the water. I mean, again, we go down to Ocean City quite a bit. For both of us-
I: Well, thinking about what's local to you when you're taking those walks, what's the feeling? Is it you find it peaceful? Any other descriptive words?
P: It's peaceful. I think it adds a certain additional level to not just cardio and not just this is good for your health, it adds... I know I keep on saying pleasure, but it is. It's like for-
I: But what's the emotional benefit is what I'm looking for.
P: Well, the emotional benefit is that it's pleasant. I mean, you feel good when you're by the water. It's a very calming effect. We're not sure why, I mean, for both my husband and I. But being by the water, it's just very calming, meaning it's just... You can just see the ripple of the water. The weather is very indicative. Right now, there's a storm coming up. I know we're not talking about the ocean, but the ocean really reacts to these weather systems. It's very interesting. Again, I know I said it's pleasurable, but it's also informative. You start to understand the movements.
I: You're understanding nature-
P: Yes.
$\mathrm{I}: \quad$... patterns.
P: You understand cause and effect. Again, with the ducks in the pond, ducks and swans apparently can't get too close to each other because there's issues in the water.
$\mathrm{I}: \quad$ So they're having turf wars on the lake?
P: Yeah. Who would've thought when I'm walking, then I'm watching the turf war with a duck and swan. Again, I haven't seen a swan in a long time, but again, there's a surprise. You talk about surprise. There's intrigue and there's the unknown. That's exciting that I hadn't seen a swan. My husband actually stopped and took a picture because I can't remember last time we saw a swan. Again, that's what you get from the water.
I: So your curiosity, intrigue, excitement, calm, peaceful.
P: Right.
I: Great. Informative.
P: Informative. Right.
I: Let me go back to something you said earlier that you give to the Chesapeake Bay Foundation.
P: Yes.
I: Have you always cared about the environment? Was this something that you have always... This organization, was this something that you did recently or-
P: $\quad$. It's been over the years. I mean, again, we recycle. Again, it was primarily my husband's... He's a vegetarian. That has been very influential. We've been married for 35,36 years. Over the course of all that, we recycle. He's very much into the environment, walking, and all that. Again, his influence has really paved the way for me.
I: Let's go back to now you, though. before, let's say, you met your husband... I know that he's a very big influencer in your life when it comes to the environment. Before you met your husband, we're talking about single Sherrye, did you care about the environment as much as you do now-
P: $\quad$ No. No.
I: ... back then or not?

P: $\quad$ No. No, Not as much. No. Because recycling and everything, that really wasn't in vogue. Right now, I'm not a vegetarian, but I eat very little... I eat no red meat and maybe just chicken and fish. Back then, I got burgers, got all that stuff. So, no. Now I'm much more aware of nature and the environment.
I: When did the concern for the environment start? Yeah, you have your husband who's the vegetarian, and he's yapping away at this and that and whatever, and you're just like, "Yeah, okay, honey. Calm down," but when did you really start to care?
P: I think when you see the benefits. People change when you can see it benefits yourself. When I take the walk, I can see the difference in my pleasure when I walk on a treadmill versus walking around a pond. So again, when you start to see how it benefits-
I: When you weighed that emotional benefit, like, "Hey, it's so much better. The experience is so much better to walk around a body of water like the pond as opposed to just me getting on the treadmill."
P: Exactly. When.
I: I got it.
P: When you see the benefit, then you say, "Oh, this is good," and so then you want more of that because you can see the benefit of it. I want to try to find more paths that are around the water. In fact, I just found one this morning we did that was around Assawoman. It's called Sunset Island. It's actual walking trail. It hugs the Assawoman River. It's beautiful. Now, because I find I enjoy walking around water, I'm pursuing that more than being on the treadmill.
I: Understood. So when you felt the emotional benefit outweighs just walking on a treadmill.
P: Exactly.
I: Got it. Let's now talk about... We talked about your feelings, the calm, the peaceful, the curiosity of finding out the unknown. I think that's awesome. Is there anything that you're doing differently now after you felt that emotional benefit? One of them, obviously, is that you're searching out more trails that are near bodies of water-
P: Yes.
I: ... because you felt that emotional benefit. What else are you doing differently?
P: I mean, again, we're spending more time by the water. I know you're saying about not to include the ocean, but both my husband and I are drawn to the calmness of the seas. We're spending much more time by the water, meaning living by the water. We travel very, very frequently to Ocean City. But again, we're doing not just the ocean. Again, we're exploring the other waterways, and there's a lot of them around Ocean City that we're finding out.
I: Anything else?
P: No. That's primarily that. I would say we're just really concentrating on our lifestyle around the water now that we're retired.
I: Going back to the emotional aspect of it now, some people spend a lot of time around the water, and they find it very fun, and relaxing, and great, but they don't necessarily care about the water, like the condition of the land versus water, how clean it is, how healthy it is. Has that changed for you?
P: Well, I think my husband and I, we've... Again, this is ocean related. Several winters, we went to Hilton Head to get away from the cold. We evaluate the beaches. When we're looking at maybe do we want to get a property by the ocean, we're looking at the beaches. We're looking at the condition of the beach. Again, being down Ocean City, we take notice of what they're doing in the evening to preserve the beach to keep it clean. But again, that's around the ocean. From that perspective-
$\mathrm{I}: \quad$ Anything local?
P: No, not really. No. Not local. Again, because we're around the ocean a lot... Again, the trails we look at, if the trail stays clean, we go back to it. Certainly if it's not clean, we don't go back to it. Now, we have a trail that we think needs to be cleaned up. It used to be a golf course in Mount Vista up in Kingsville, Maryland, but it's not by the water. But, I know David Marks, who's our representative, I think he's trying to clean that up to make it a better walking trail because part of it has been overgrown, so it's not a easy walking trail to maneuver around.

I: Let me ask you a question about the one that you mentioned, the Assawan. Is it called Assawan River?
P: Uh-huh.
I: What do you think about the quality? Have you cared about keeping the rivers near your home, or lakes or streams near your home clean? I mean, you talked about the ocean, so you definitely have an interest in keeping that pristine or keeping that water healthy, obviously. What about nearby your home?
P: Well, I'm trying to think. Our house is actually a well system, so we're very careful about what we throw down the drain. That's where the recycling comes in. For example, motor oil or anything of that sort, we're

Interview 8: Sherrye; October 23, 2022
very concerned about what we put down our drain now. Now, that's related to the underground water, maybe not to a waterway. But through our recycling efforts, you can take your motor oil and certain other things, paint and things of that sort, we take them to certain designated landfills so we're not just tossing. They're very careful about that. We did that this year. I think there was a drive for anything to throw out at a landfill, so-
I: So modifying behaviors at home so that it doesn't end up in those waterways.
P: Right. Exactly.
I: Understood. Understood. Well, we're almost done. Let me just give you the final exercise. This is essentially you giving us advice, giving me advice. I want you to think of me as... Let's imagine that we are on a committee to get more people to care about the waterways near their home. Our client manages parks around cities and nature reserves and whatnot, and they want to create more access points to the water so that people can either walk, boat, fish, et cetera. They think that giving people access to the water will get them to care more about it. What do you think about that idea, and what advice would you... Let's say you're proposing an idea around... proposing a campaign or something. What do you think about that idea of if you give people more access to water, people will care more for it?
P: That's a good premise, but the person has to see that by how the access to more water benefits them. You see what I'm saying? That you can't just say-
I: But you have to show... Like you said earlier, I didn't realize it, but I get an emotional benefit from it. We have to demonstrate that emotional benefit? Is that what I'm hearing?
P: Emotional, economic, financial benefit. When you show a benefit to a person for having this access, they're more apt to participate. If you just say-
I: $\quad$ Give me an example. Give me an example.
P: For example, access to a water that... For example, you have boating, and you can get reduced rates, so if you want to do boating or paddle boat, or something that draws them they can see a benefit to themselves.
I: So make it economically accessible,
P: Economically accessible. Also, again, from a pleasure perspective. I don't know. I'm a retired CPA. Tax credits, if they do something. You have to build it in that this access is going to benefit the person some way, either in pleasure, finance, economically, politically. Somehow it'll benefit them, and that will draw people in.
I: In internet speak, it's called the what's-in-it-for-me.
$\mathbf{P}$ : Exactly. You have to find a niche to pull a person in.
I: The niche is that it's economically... People of all incomes can participate. We have to demonstrate the physical benefit, also the emotional benefit, the level of pleasure, calm, the curiosity aspect of it, learning new things by observing nature, like you mentioned.
P: Right.
I: What else do we... Go ahead.
P: Also, you can say, "If we don't do it, this is the negative output." You can say, "If we don't take care of our waterways, if we don't do this, then here is the negative side." It's almost like negative. But, the positive is probably a little bit more enticing, saying, "If you do this, you'll get pleasure," as opposed to, "If you don't do this, it's going to be bad for the environment."
I: All right. One final question. Since you've been walking along the water, have you found priorities changing in your life?
P: I think we're making walking... Again, like I said, usually, I was really into my treadmill. Then, as I kept walking on these waterways, that, again, was spurred by my husband, I'm finding now that I'm researching the walkways around the water. Like this morning, I found this walkway on what's called Sunset Island. I'm like, "Let's go here. This is along a waterway." I'm finding that I'm moving away from the treadmill. But again, I might have to move back depending on the weather. But as the weather's still cold out, I don't really default to the treadmill anymore. I default to, "Oh, let's go walking," especially along the waterway. I've switched gears.
I: Understood. Awesome. Well, Sherrye, thank you so very for sharing a little bit of your Sunday with us. You will receive a $\$ 75$ gift card around 7:00 PM tonight.
P: Thank you.
I: I thank you so much.
P: Thank you. Have a great day.
I: You, too. Likewise. Bye-bye.
P: Bye-bye.

[^0]:    "It was at an unhappy moment. ...I had graduated. I had my degree, and I was ready to find a job in my field. And I was having those day-to-day struggles, getting the email, 'Hey, thank you for reaching out. But unfortunately, we decided to go another direction.' ...I started going on more walks and going on these three or four-mile runs. And I'd stop by a lake or water and just kind of catch my
